## RASTER BLASTER

The speed and dynamics of Raster Blaster will astound you. It is an amazingly realistic full-colour pinball simulation, keeping separate scores for up to 4 players. 'Easy' and 'hard' options can be set and the paddles control the force of ball release as well as the flippers. Raster Blaster comes complete on a $5\frac{1}{4}$" diskette and is available for just £15.50. Clip the coupon and enclose a cheque or postal order payable to 'The Leisure Collection'. Please allow 14 days for delivery.

*West Bridgford*
*Nottingham*

## GAME FOR A NEW MODEL

Dear Sir,

Firstly, can I congratulate you on a; happily, very different magazine which I think is assured of being a long and lasting success. I have a Tandy TRS-80 Model 1 and look forward to keying in Tarot when I have the time. However I am thinking of upgrading to the new Model III machine but am waiting to see whether any games software becomes available for it.

Do you know if any software houses are going to specialise in the Model III Tandy. I have quite a library of Model I discs and would like to build up a similar one for the new machine.

*J. Hodgkiss*
*Harrow*
*Middlesex*

**Editor's reply: The best answer here, is that the Model III does have a conversion facility so that Model I discs can be changed to run on the upgraded machine. The technique is well documented in the Model III's TRS DOS manual.**

## A TALE OF TRIAL AND ERROR

To whom it may or may not concern (in other words, to the person who doesn't want to concern him/herself with it, and I don't blame you!).

I wish unhappily to tell you that I have here the solution to November's puzzle. Unfortunately, we (my family) won't have any sort of programmable or semi-programmable computer or T.V. game until Christmas, when we get the Atari T.V. game, and thus, I was not able to think up a suitable program to run on the nearest computer, **five miles away** in Portadown.

So I tried trial and error, and then I tried maths, and with a little luck stumbled on the solution at roughly 7.30 (I had bought this magazine at 3.30).

What I wish to know is: is it possible to get some sort of wooden spoon? If so, I would like very much for you to send me as much info as you can legally gain from Atari about their T.V. game. **But wait for it . . . in return** I will give an honest criticism of **YOUR** magazine! READY? . . . (clever eh?) RUN.

For a start, though I run the risk of being shot, I think your magazine centres too much on the actual games programs.

Secondly, I find only one page for the Bugs, which, I think, are highly entertaining and should be given more room (by the way, the artwork is incredible).

Thirdly, the words, "hardware" and "software" are thrown around like ping-pong balls (what are pseudo random numbers?)

To finish, I think your Basic programming guide is a great help to my classes. I do computers for "O" level but unfortunately, our computers won't arrive until January.

*Colin Agnew*
*Lurgan*
*Craigavow*
*Co. Armagh*

**Editor's reply: To all the many people who wrote in with solutions to our giveaway puzzle: congratulations, you did much better than I did!**

**But without a computer program to go with them, I'm afraid the fact that you solved the puzzle (I have heard of solution times ranging from 30 seconds to two hours) is not enough to win you a computer — we need a program listing as well.**

# THE Video Genie EG3000 Series

**WITH** *16K user RAM plus extended 12K Microsoft BASIC in ROM *Fully TRS-80 Level II software compatible *Huge range of software already available *Self contained, PSU, UHF modulator, and cassette *Simply plugs into video monitor or UHF TV *Full expansion to disks, and printer *Absolutely complete - just fit into mains plug.

# Paper Tiger 460

The Paper Tiger 460 sets new standards by incorporating many features previously only available on units costing much more.

Features like a specially developed nine wire 'staggered column' head which overlaps the dots of each matrix character with just one pass of the printhead giving a dense, high quality print image without reducing the units 160 c.p.s. print speed.

It also offers a bi-directional logic seeking device to enhance its print optimisation characteristics and wide range of 'print versatility' features such as mono or proportional spacing, automatic justification, programmable horizontal and vertical tabbing, and 'fine' positioning for word processing applications.

# Paper Tiger 560

**£695** + VAT

The Paper Tiger 560 is the first printer which bridges the gap between convenitonal matrix and 'daisy wheel' types offering quality printing at a relatively low price.

Full 'width' 132 column printing at 160 c.p.s., a unique nine wire 'staggered' print head, bi-directional printing, an inbuilt tractor feed and a host of selectable features set it apart from ordinary matrix printers.

Plus for even greater versatility a full dot plot graphics facility if supplied which includes a 2K buffer.

**£895** + VAT

# Books & bits

Books — Manuals — Diskettes — ribbons — Paper — chips (2114 x 2 1K) £4 pair.
RS232 to Centronics interfaces £40 etc. etc.
A variety of second-hand computer equipment usually available, spares, repairs and service.

## CITY BOMB BOMBS OUT

Dear Sir,
Having just purchased the first edition of your magazine, I was sorry to find so many faults in your City Bomb program. I have a ZX80 with new RAM and am very new to programming but after much puzzling, I finally got the program to run.

Apart from this I found the magazine very good.

*J. Wilson*
*Harlow*
*Essex*

**Editor's reply: We were ashamed to discover the mistakes that had crept into the City Bomb listing. We were made to do penance by rushing around answering the many queries about the listing after we appeared in the newsagents.**

**For the record: Part of line 160 went mysteriously missing, it should read:**

```
160 IF NOT F = 118 AND F>0
    THEN GOTO 700
```

**A bracket escaped from line 560, it should read:**

```
560 LET X =INT ((RND*2) +X)
```

## CAUGHT IN THE TRAP

Dear Sir
I've just seen your new *Computer & Video Games*, and on the whole I think it is quite excellent.

Unfortunately you have fallen into the "trap" of those 'zines before you.

You have published nine programs for nine computers, but, who, in the home computer hobby circles, has access to nine computers? I'm sure that with a bit of research it would be possible to produce a page of computer dialects.

I'm not suggesting you do it with every command, just those that have their own dialect.

In addition I suggest a similar thing before each program, giving the alternative POKEs for each machine etc.

As hardly anyone has access to nine computers, this would make nine programs accessible to almost everyone, and I'm sure it would put you "head and shoulders" over the other 'zines, who just say: "the POKEs have to be changed" — but to what?), and would almost certainly ensure your survival in a competitive field.

I look forward to your Adventure series, especially writing your own.

*B. A. Moore*
*Bolton*
*Lancs*

**Editor's reply: That is a perfect solution Mr. Moore but I think we would soon run into problems if we tried to produce a table with each of the many computers' special Basic commands. However, we have already adopted your idea in our *Down to Basic* pages, where we are teaching the language with reference to each machine's statements and how to transfer a command from one to another.**

## A CHANCE TO REVIEW

Dear Sir,
Thankyou for a marvellous magazine which I thoroughly enjoyed. I would like to contribute to the "mag" myself and wondered if I could offer my services as a reviewer of games on the ZX81 and possibly the Acorn Atom (after Christmas).

I have acted as a reviewer for many of the lesser known games magazines and would welcome the chance to tackle some of the many computer cassettes now out on the market.

I also have a Philips G7000 games centre which I could utilise on your behalf in reviewing their cassettes.

Either way can I wish you all the best for the future of a welcome addition to the magazine world.

*T Greener*
*Rickmansworth*
*Herts*

**Editor's reply: We have received several letters already from people who would like to help us out with our reviewing of games and TV centre cartridges. We do use outside reviewers and would welcome some additions to our list of helpers, so if you are interested please write and let us know which machines you have access to and we will try to send you some tapes and see what sort of a job you manage. If possible please enclose details of whether you can use disc drives and give us a work and home phone number to allow us to contact you easily. If we get swamped with reviewers for a certain machine then I'm afraid you will be unlucky but until then, we would love to hear from you.**

**If you have a comment or idea for Computer & Video Games we would like to hear from you.**

**Please drop us a line at: Computer & Video Games, EMAP, Durrant House, 8, Herbal Hill, London EC1R 5JD. While we will respect requests for anonymity, names and addresses must be supplied.**

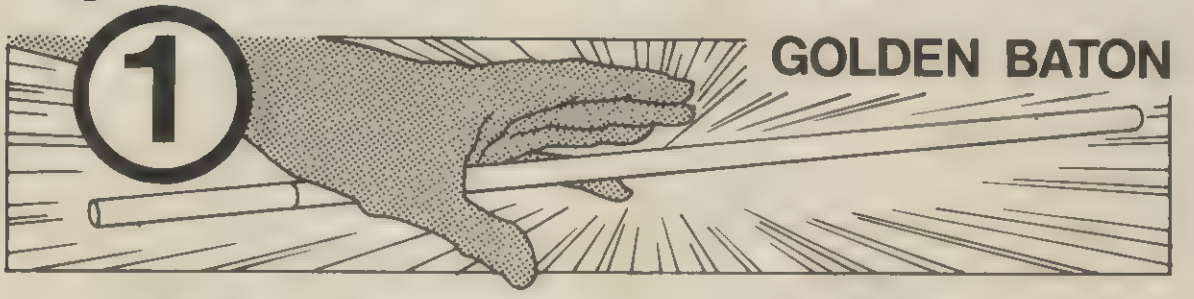
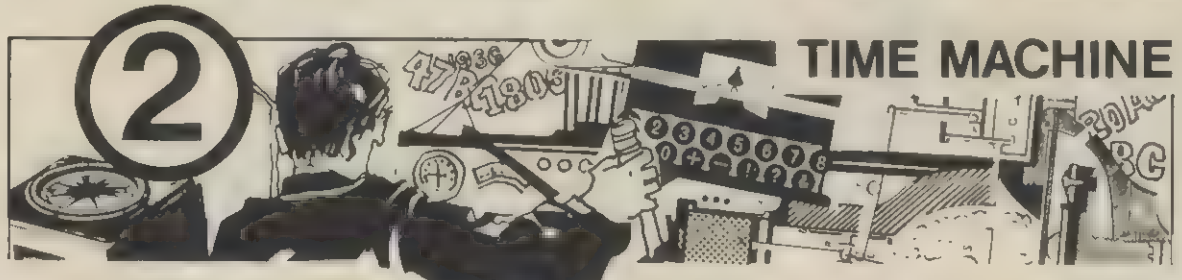
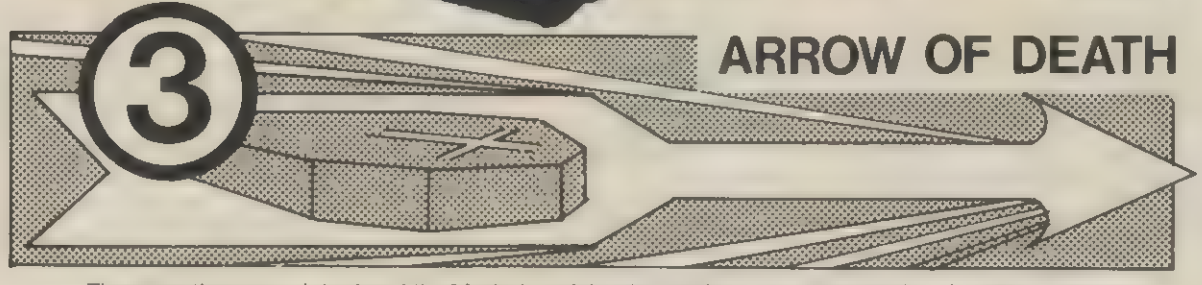
## Mysterious Adventure







Three months ago we introduced the Mysterious Adventure series, a brand new series of machine language Adventures written by Brian Howarth. The first one, The Golden Baton, was greeted with enthusiasm by experienced and beginner Adventurers alike. Now the second and third in the series, The Time Machine and Arrow of Death, are available. The Arrow of Death, although entirely self-contained, is the first of a two part Adventure. The second part will be available early in the new year.

Mysterious Adventures are available for Models I and III TRS-80 and Models I and II Video Genie, both on tape (16K minimum) or disk (32K 1 disk minimum). A TRS-80 Model II version will be available shortly.

| | | | |

## ARE YOU KEEPING THE ALIENS AT BAY?

Do space invaders fight each-other to avoid duty on machines which you're playing?

If so, then why let your reputation rest on those cold distant planets inhabited by the green meanies, let your own world into the secret.

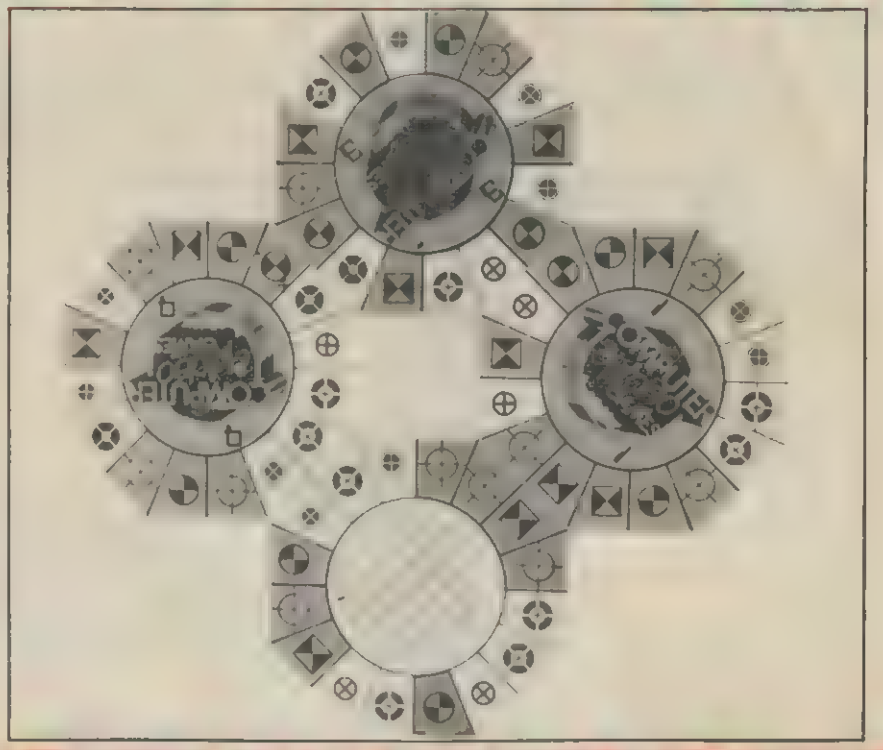
In conjunction with Taito Electronics we are searching for the fastest, deadliest arcade player this side of Alpha Centuri. No matter which game you excel at, you are eligible to enter and it's very easy to do so.

Just turn to the reader reply card, which you will find inside our back cover and fill it in. There are some questions to be answered on what you are looking for in arcade games, so that we can tell the manufacturers and help you to get the kind of games you want.

Next fill in the name of the machine which you have accumulated all that expensively won expertise and take the card down to your local pub, club or arcade. Put the best score you can on the machine and ask the pub or arcade owner to sign it and send it off to us.

Should you find yourself finishing with a score which is not up to your usual standard, simply try again.

If, after you have sent the card in, you manage an even higher score, don't worry, you'll find another card and another chance to enter in our January issue.



We will keep a running chart on the scores on the 10 most popular arcade games which will be published in our Arcade Games section to give the rest of you something to aim at.

And the three top scorers on the three most popular machines who send us back their entry forms by 1 January will be invited along to take part in our Grand Arcade Game final.

So if you are the only human still keeping the multifarious hordes of space still locked inside their machines and off the streets of Britain, then let the world know who they owe their thanks to.

## HERE IT IS SOLVED AT LAST!

**Here it is ... the free first issue puzzle as you might have despaired of seeing it, solved!**

**Although judging by the amount of letters and phone calls we had, many of you have already managed to match the four cards as shown above.**

**Times for the puzzle ranged from an impossibly "lucky" 30 seconds to a couple of hours slogging through mathematical formulae. Many of you proudly claimed that you produced a solution without the use of a computer.**

**Our congratulations go out to all of you who managed to do what we in the office couldn't, but I'm afraid that there are still only three VIC-20 computers up for grabs and these will go to the best programs we receive to solve the puzzle.**

**But it's not too late for you to enter, the closing date is 13 December when all the entries will go forward to be tested against one-another by our judges.**

**Next issue we will be printing our program solution for those of you who could not work out how to start.**

**And if you were one of the many who complained that you do not yet have a computer and so were unable to enter, then turn to page 11 where you will find the all-too-easy-to-enter Great Template Competition.**

## BRAINWARE ANSWERS

Mercury, Venus and Mars will be the first three planets in line with the sun in our Mind Routines problem. And this astronomical wonder will take place in some 7,341,802.4870886 days (correct to seven decimal places).

The solution to Nevera's Crossword is printed right. We will print the names of the winners next issue.

This month's Brainware problems are on page 20.

MICROCOMPUTERS AT LASKYS

Circle No. 105

# TEN WINNING WAYS TO USE OUR TEMPLATE

You are now the proud owner of a *Computer & Video Games* free template and are probably wondering just what miracles can be performed with it.

The quick-witted among you will probably already have noticed that the edges on the template are ruler-sharp. Some of you might possibly have gleaned the information that when it is linked up along the bottom of a C&VG page, it reaches from one edge to the other.

The reasons for this may soon become clear . . . long ago, when this publication was a barely suppressed gleam in our publisher's eye, he pondered long and hard over the problems of keying in computer listings.

Realising the difficulties of keeping one's place in a long listing, he decided that what the public was crying out for was a tool — a carefully designed precision instrument to help with the keying-in process. He came up with the very template that was attached to your magazine's front cover.

So **we** want you to use the template to key-in our program listings. **You** might have come up with some other more imaginative uses for it. This is the essence of the Great Template Competition: we would like to know just what you would like to use our template for, whether you think it ought to be a template at all or who among the rich and famous could make best use of this 8" × 1" piece of plastic and why?

The 10 most imaginative suggestions which we receive by 7 December, will win a Bugs T-shirt and their names and ideas will be entered into the annals of *Computer & Video Games'* history.

ENTER THE GREAT TEMPLATE COMPETITION.
SUPER PRIZES TO BE WON!
SEE THE COMPETITION PAGE IN THIS ISSUE FOR DETAILS.

The judge's decision is quite final and her mind is reasonably unwarped — it might be worth bearing this in mind.

## COMPETITION RULES

COMPUTER & VIDEO GAMES' many free competitions are open to any one except EMAP employees and their relatives.

Entries to our Mind Routines, Nevera Crossword, Know Your Creature, Great Template Competition, Game of the Year and Arcade of the World competitions, should be sent to: COMPUTER & VIDEO GAMES, Durrant House, 8 Herbal Hill, London EC1R 5JB. Judges' decisions are final and no correspondence can be entered into.

Send entries to Mind Routines on a postcard and in all cases please include a name, address, and where possible, a phone number — so we can let you know should you have won.

# TAITO SPACE INVADERS IN YOUR HOME

A Taito space invaders machine is up for grabs for the winner of the Know your Creatures competition.

Taito Electronics, the name behind the space invaders craze, will make one reader's dream come true — putting an inexhaustible supply of alien terrors, safely locked away in a cocktail table, in his or her living room.

If you can tell which machines the three creatures below inhabit, then that space invaders table is looking closer already. All you have to do is write beside each picture what machine you think that particular creature features in. For example: if the first one looks like a Puckman, Pacman or Mazeman inhabitant, then write any of these words beside it and we will know what you mean.

Then answer the question below, in not more than 25 words and cut out that part of the magazine, but do not post it yet. Put it with the three creatures we featured in our first issue and in our January magazine you will find the last three creatures to complete your set. When you have named all nine, send the three sections back to us.

This gives you time to hunt around your local arcade if there is a creature you are not sure of. The first correct answer out of the hat wins Taito's space invaders table.

And if you missed our first issue, then don't despair as we will be showing them again in that January issue.

## THE NEW CHESS CHOICE

Chess enthusiasts, who opt for a computerised opponent are having an ever more difficult choice to make.

London based Westrak has a new medium priced chess game (it sells for £100) tempting buyers with a yen for a "full-sized chess board in an attractive brown plastic casing".

The chess board has a sensory surface with lights in each square which show when the computer wants to move. The player has to move its piece into the new position. It means you don't have to enter each move via a keyboard — just like playing a human, except you can set the skill level of your opponent.

Altogether there are 12 different levels, ranging from the learn mode, where the computer will help you along by suggesting a suitable move to make, to good club player standard.

If you make illegal moves the computer will also let you know by flashing it's lights at you. Lights also flash when the player's king is in check, and when checkmate is secured it will make another noise.

The game sells under the name Westrak CC1 and is available directly from the firm which is based in North London.

## A RANDOM ADVENTURE

### THE DUNGEONS OF DEATH

Not only a random dungeon but random monsters await the intrepid adventurer who dares the Dungeons of Death.

Ten tortuous levels have to be braved in a 45 minute time limit to win through this graphically displayed adventure.

The adventurer must first barter with the dungeon master for his arrows — magic and the more usual wooden variety — his characteristics are then generated, he is armed and armoured and then sets off on the quest by loading the first level.

A list of strangely named monsters with a toughness rating in percentage terms is generated and should be memorised if you are not going to end up fighting something deadly after running from a pretty harmless creature.

Treasures are there for the taking to reward the bold adventurer.

## A BETTER BET FOR PUNTERS

### HELTA SKELTA FLATS

Followers of the Turf will find the "Sport of Kings" lovingly reproduced in the horse-breeding and racing game of Helta Skelta Flats.

The aim of the game is to breed horses and then run these thoroughbreds in a race against rival horses, placing bets on them to win money.

It is similar to that popular board game Totopoly and a fascinating concept for the Sinclair ZX81, but in some ways it requires more work with pen and paper than with the keyboard.

The ZX81 acts as a random selector for most of the time, with the information being kept on forms which come with the games package. Two-six players can take part.

Each contestant starts by naming their horse, and the computer allocates various characteristics, for example: good runner or weak legs. This allows the player to enter the information onto the form card. Once this is done breeding can take place — for a fee. It should be possible for somebody who knows about these things to produce a winner.

Once interbreeding has taken place the race can begin. Odds are calculated by the computer depending on the form of each horse. Bets are also taken, with tote slips also provided in the package. The race is run and the winner collects from the other players.

Our reviewer felt more work needed to be done on the presentation and that some of the paperwork necessary could be incorporated in the available 9K of unused memory. Horse Racing enthusiasts will soon forgive these niggles though.

Helta Skelta Flats comes from London-based Helta Skelta Software and costs £4.

It runs on a ZX81 with 16K RAM pack.

The game is supplied by London-based Sharpsoft for the Sharp MZ-80K and costs £8.25.

Among the other new games from Sharpsoft is a logical, test for people who like a financial challenge. It is called Stockmarket "F" and involves amassing as many stocks and shares of the highest prices as possible.

Stockmarket "F" costs £5.85. VAT and postage are included in both games.

## A FEW POINTS TO MAKE

### RHINO

A sorry fate awaits the computerised figure who walks innocently onto a field in Rhino.

He is faced by an animal of the same name with a hasty temper and a rather intimidating horn. The creature in question tends to take an instant dislike to anyone invading his field and has a few points to make on the subject.

Luckily there is a wooded area in the field and that is the poor unfortunate's only chance of escape. He must craftily entice the furious rhino into the trees and try to lose him there.

Even if he succeeds, the reward is not a pleasant one — with only a few seconds respite he wanders into another field to find himself with two beasts to lure to a foresty fate!

Rhino comes on a tape with another animal game called Wiggle. This time there is a smaller, but equally dangerous creature to contend with. The player has to guide a snake through the gaps in a set of parallel walls. But once that is mastered the game gets more difficult with the gaps getting more closely spaced.

These two games are for Acorn Atoms with 10K memory and require the floating point ROM. The cassette is priced at £5.00 from Liverpool-based Bug-Byte.

A second new cassette from the firm contains three games: Squares, in which you have to arrange letters in alphabetical order within a square; the musical memory game Simon; and Parachute which involves landing three parachutists on a platform. This also costs £5.00.

# GAMES NEWS

## WHERE THE ENDS ARE REALLY DEAD

Finding the way out of a maze is difficult enough without the hazard of man-eating monsters waiting to gobble you up if you cross their paths.

Running on the Commodore VIC-20, Monster Maze is an unusual game without a time limit and could be a big seller. The maze unfolds in five square sections as you walk through it, so you cannot see where you are headed — it could be a dead end.

At the beginning of each round a new maze is generated randomly so the player cannot get familiar with a particular one. He controls a man at one end of the maze using a joystick to follow the path moving up, down, right or left. As the player does not know the section he is walking into will be the correct path the game can be frustrating when you keep finding dead ends.

It sounds easy enough but not when a hairy monster is guarding the exit and moves towards you intent on killing you. He is a crafty beast and moves only as the crow flies, so he sometimes walks diagonally and has the nasty habit of hiding in the walls of the labyrinth — lying in wait to take the intrepid explorer unawares.

With each new maze the number of monsters increases, creating more hazards to negotiate. What you can do to thwart them, is lure the creatures away from the exit. You have to be clever to entice him towards you, making sure you can side-step him and quickly make your way to the exit.

Once you have reached round three with three monsters lurking in the maze for the next stage you are given a break with only one monster to contend with. For each round completed you score points.

This is one of the latest games for the VIC specially imported from the States by Adda Computers' VIC Centre. With one other game on the cassette it sells for £14.95.

## THE KNIGHT'S DAY

The age of chivalry and gallantry returns in the maiden-in distress game, Damsel and the Beast.

The player takes the part of our brave hero, sworn to save the wretched but vociferous damsel who is locked in the bowels of the wicked beast's castle.

A rather tongue-in-cheek adventure, this game sets its hero a randomly generated 35 rooms to search through to complete his task. The damsel must be found by working through these rooms, armed with clubs which can be used either to beat the beast, or smash down obstructing walls.

Only once the hero has slain the beast can he lead his thankful damsel to the exit.

To help light his path our knight is given a number of torches at the outset, which can be used to fend off the beast if he attacks. The tally of the clubs and torches is kept and displayed as each can only be used once.

Bug-Byte is the supplier of this adventure game and it is for use on a ZX81 with 16K RAM pad. The price £6 50.

## BOLDLY GOING ..... ON THE ZX81

Captain Kirk and Dr. Spock are ready once again to tackle the baddies of the furthest galaxies-but this time through the auspices of a Sinclair ZX81.

The 16K RAM pack gives ZX81 owners a Startrek game with more details and more facilities. It entails all the usual features of Startrek with the player in control of the Starship Enterprise, navigating it and Kirk's crew on a hazardous mission through space.

The Klingons are there in full force too, complete with superfast firing lasers which the Enterprise has to avoid. She can defend herself with the special photon lasers she is equipped with. Startrek costs £5.00 from Bug-Byte of Liverpool.

## WORKERS STRIKE IN ALIEN ACTION

The space labourer is given a tough test of his workrate in the alien-bashing game of Apple Panic.

Any attempt to down tools from this worker of the future, results in death by devouring. The labourer is given a shovel and a network of ladders connecting various levels on the screen.

His task is to climb the ladders and dig holes which the Apple aliens will unwittingly fall down and hang from-suspended by their feelers. The workman then puts aside all thoughts of tea-break and rushes up to fill in the hole and send the creature plummetting to its death before it can climb to safety.

Five beasts inhabit the first "wall" and these can be killed by a fall of just one level.

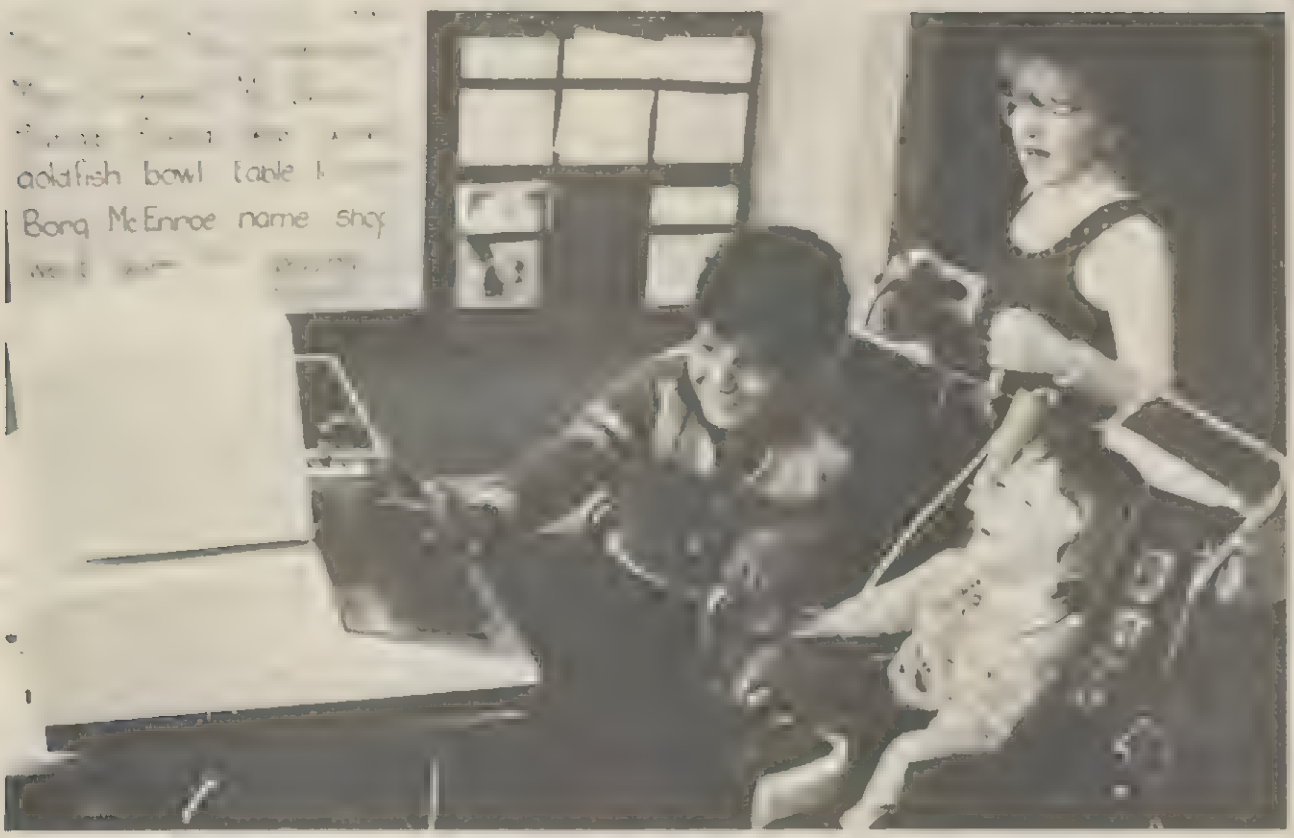
The second screenful of creatures include a variety which can only be destroyed by digging two holes, one under the other, and sending him crashing down two levels.

If you succeed in bringing down this second creature, a third — needing a three levels fall to kill it — appears.

There are three lives to start off with, but bonus lives can be gained by the industrious. This time and motion studier's delight is available from Richmond-based SDB software — among others — for £8.95.

# We can all help if we care enough

A special from Educational Computing



Many people regard computers as some form of man-made monster, heralding the advent of an era where machines are the masters of men. The emergence of microcomputers in the mid-seventies has helped to overcome this misguided view of how computers will affect our lives.

Each month, Educational Computing shows the tremendous advances being made in the enhancement of computers, particularly micros, as teaching aids. In this annual issue, ***Learning to cope – computers in special education,*** we look at the marvellous achievements of many very dedicated people working with disabled and mentally-handicapped children.

Tremendous progress is being made in this area, brought about by a mixture of ingenuity, flexibility and determination on behalf of the manufacturers of specially-adapted products, writers of applications software, nurses and teachers putting ideas into practice and the children themselves.

In our annual, we look at the latest developments in special education. You can read about the many fascinating applications of microelectronics in this field, what the people involved think and what the future holds in store Most important of all, you can find if you can help — even in a small way.

**Learning to cope — computers in special education £1.50**

Please send me a copy of *Learning to cope – computers in special education*

# GAMESNEWS

## MOORE STARS ON YOUR T.V.

A computerised rival to celebrity stargazer, Patrick Moore, can guide you through the night sky and its starry wonders.

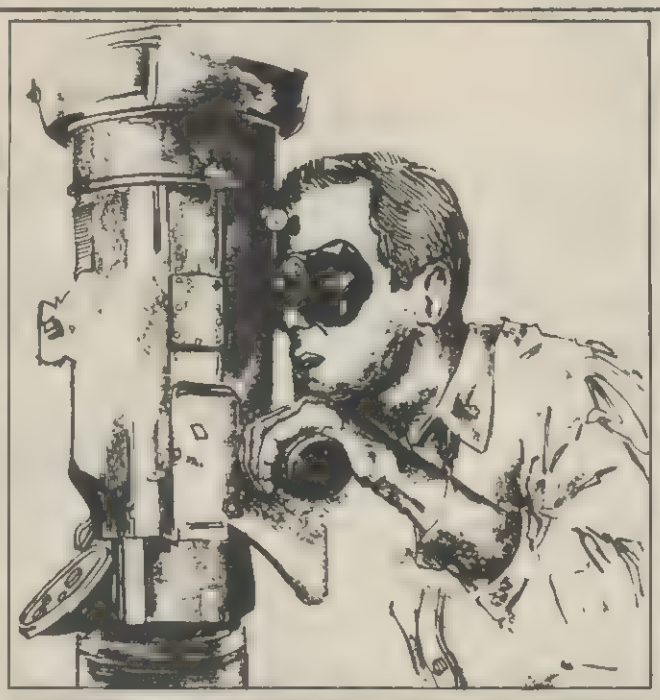
Constellation is the astronomy aid which will turn your television screen into the night sky — with the help of an Acorn Atom. The view you get on the screen is of the night sky as seen through the revealing lense of a telescope. Using this computerised guide it is possible to look at stars from any point in the northern hemisphere at any chosen time and date.

All the stars that appear on the screen can be shown by magnitude, constellation or number (supplied in a list with the cassette). Make use of the zoom facility to get a good close up of selected stars.

This program was written for a Nascom originally and has only just been converted for use on the Atom. Program Power of Leeds is behind this version which will cost astrology fanatics £7.

Another recent addition to Program Power's Atom list is Mazeball. The player's part in this game is to control a ball which bounces up and down the paths of a maze.

A variety of hazards crop up in your way which must be avoided by bouncing the ball out of their path. Mazeball retails for £4.95.



## REBEL AGAINST AN EMPIRE

The galaxy has been taken over by a force of ruthless, wicked aliens bent on suppressing the inhabitants.

A lone rebel leader with a spaceship is the only means of defence and the only hope of ridding the galaxy of the tyrannical invaders. The player takes control of the rebel and plans his strategy against the alien empire.

Project Nebula is the mission undertaken by the player to free the galaxy. In the Tandy TRS-80 colour computer game, there are four levels of skill, so the player can work his way through from inexperienced to advanced.

Special features of this new game include checking the fuel supply and refuelling and having to fly a disabled ship, damaged in an exchange of fire. Control is via a joystick.

From the Tandy Corporation Project Nebula costs £24.95, fairly expensive as games go but the new Tandy has colour graphics and the software is most up to date.

## PLUMBING THE 3-D DEPTHS

For sheer atmosphere it is hard to beat a good submarine warfare game and the new one coming out for the Atari home computer has the graphics capabilities to really bring it to life.

Called Submarine Commander, it incorporates 3-D graphics. Realism is brought out with all the dials and gauges found in a real submarine, including: air pressure, oxygen, speed and depth readings.

And that atmospheric bleeping sonar, tracks your own vessel's path with a shadow indicator as well as revealing the presence of other enemy submarines in the area

You can take the vessel into battle station mode and fire torpedoes at a chosen range and depth.

To add variety and realism to the submarine's simulation, the programmer who wrote the game for Atari has given the player three different views he can survey.

Firstly, there's the picture of the scene below and around the sub., so you can see hazardous objects and possibly creatures which might be lurking in your path. Then, there's the view of the submarine's position in relation to the land, and finally what is in sight when you look through that vital periscope.

This will be out at the end of November from Atari's U.K. distributors Ingersoll Electronics. The cost is £25 and a full review will follow in a future issue.

## GOLD RAID ON THE LABYRINTH

Take a giant step with two hands full of gold and it might take you right into the jaws of a greedy minotaur.

He paces the labyrinths of a deep cavern guarding five valuable bars of gold which lie wrapped up inside a treasure chest. As soon as he senses an extra presence in his lair, he is on the alert and uses his automatic homing device to track down the intruder.

The only thing that will stop him moving towards the intruder are walls blocking his path but he will home in using a random direction to surprise the intruder.

The adventurer who dares wander into the minotaur's territory is armed with a specially-developed minotaur detector which warns him when the creature is five squares away. The higher the tone given out by the detector the nearer the creature is, warning the intrepid explorer to take evasive action.

Like any human the explorer can only carry two bars at once so he has to keep making trips back and forth until all five are securely locked up in the wall safe.

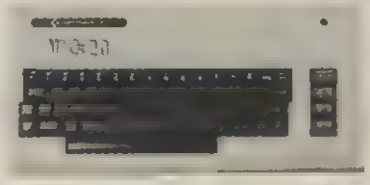
Minotaur runs on an Acorn Atom requires 5K with 6K graphics. It is the latest pack out from Acorn's software arm of Acornsoft.

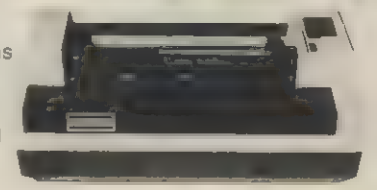
Two other games are on the cassette, a version of the popular arcade game Puckman called Snapper, and a sadistic but compulsive game, Babies. The player must catch babies who are leaping for their lives from the top of a burning building. If the trampoline misses three babies, it marks the end of the game. It costs £10 plus V.A.T.

# the vic centre

Adda Computers Ltd., a major supplier of computer systems to industry and business, have opened the Vic Centre in West London Here you can see, discuss and buy everything to do with the new VIC 20 personal computer—in person or by mail. Hardware, software, technical advice and information is available from an experienced staff of experts Even if you already own a VIC 20, get on our mailing list to know about new developments. Remember—everything has the backing of Adda's reputation, and there's a full 12-month warranty on all hardware. The Vic Centre is easy to reach—Just off the A40, close to North Acton tube station

## Not just a computer but a whole expandable system





**AT ONLY £189·95 inc.VAT. Special cassette deck £44·95 inc.VAT.**

The VIC 20 is a fully-fledged, easy-to-use computer. It's the core of a great expandable system, with full-size keyboard operation. First-time users can work it immediately with plug-in program cartridges, using your own colour TV to get up to 24 colours on screen, and three different sound tones. Or write your own programs in BASIC. The VIC 20 lets you build a system as needs and budget dictate. You can expand its memory to 32k Byte with Plug-in modules, and transfer data to external storage units. So the VIC 20 is more than just a personal computer—and its system will expand to put it even further ahead

**VIC 20 Dot Matrix Printer**
Tractor-feed, 80 character-per-line, 30 characters-per-second printer
**£229.95** incl VAT

**VIC-RS232 INTERFACE**
Fully implemented (true levels) RS232C-V24
**BI-DIRECTIONAL INTERFACE**
Allows Vic to work as Mainframe Terminal Drive a Qume Daisywheel or a Paper Tape Punch etc etc
FEATURE This unit contains master power supply which supports Vic's own supply when carrying Memory Expansions, Cassette Drives, Light Pens, Printers etc

**£56 35** incl VAT

**VIC-MEMORY 3K**
Small size—low cost memory expansion
Plugs into Vic and reproduces memory-port
Can be used with other expansions gives a total of 6k user static ramon Vic
FEATURE This board allows Vic to move Basic to begin at 1024 ($0400) as in Pet and enables the use of HIGH RESOLUTION COLOUR GRAPHICS **£40.25** incl VAT

**VIC-TOOL KIT** **£28.75** incl VAT
For those who know tool kit on Pet we now have same facilities for Vic.
Renumber, Auto, Append etc
This may be used with the stack VIC Rom Switch Board

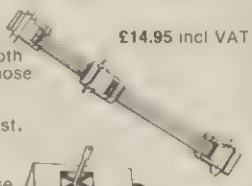
**VIC ROM SWITCH BOARD £40.25** incl VAT
An inexpensive unit which plugs direct on to Memory Expansion Port of the VIC and allows the insertion of up to 4 ROMS for games packs or toolkit aids, etc
FEATURE. Simple software switch exchanges each pair of ROMS into VIC's ROM space allowing 'clashing' ROMS to be used
FEATURE. Plug-in zero force sockets are available as optional extras to help eliminate pin damage to valuable ROMS

TERMS AND CONDITIONS: All goods sold subject to Adda terms and conditions of sale Full details available on request, but include: 7 day money back guarantee, Adda 12 month hardware warranty Please allow 21days for delivery Allow 7 days for personal cheques to be cleared. Quoted prices are inclusive of VAT

**VIC-LIGHT PEN**
This high quality light pen works in both normal and Hi-Res modes on the Vic allowing simple interaction with the Vic without keyboard entry
Easy to program and easy to use
e.g. Menu selection Non-keyboard entry Teaching Games.
FEATURE touch sensitive "Enter" contacts to eliminate accidental entry.

**£28.75** incl VAT

**VIC-Games Port Adaptor Cable** **£14.95** incl VAT
games port plug
A two into one adaptor for use with both joysticks and light pens. A must for those who require full control of games with graphics
FEATURE low-cost High quality. Robust.



**VIC JOYSTICK**
Single
Hand-Held joystick units for games use available in Pair or Single configuration.
N B (2 Singles will not work as a pair unless modified)

**£14.95** incl VAT

**Le Stick £30.75** incl VAT
The ultimate joystick. One handed multi-directional super sensitive stick with built in fire button

**VIC software** Each of these tapes **£14.95** incl VAT

**Codebreaker/Codemaker**
You play the VIC or the VIC plays you in this computerised version of Mastermind

**VIC Seawolf, VIC Trap and Bounce-out**
3 fun games, a submarine shoot out, a beat the VIC and an old favourite pub game Good games with different skill levels

**Monster Maze and Maths Hurdler**
A fun game with good colour and sound and a mental arithmetic learning game Highly rated by everyone we have shown it to Harder than you think

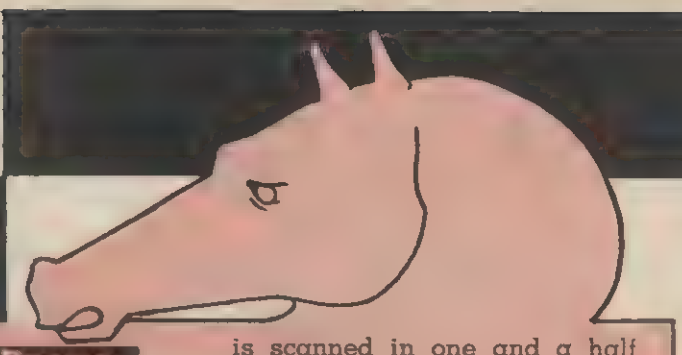
# CHESS

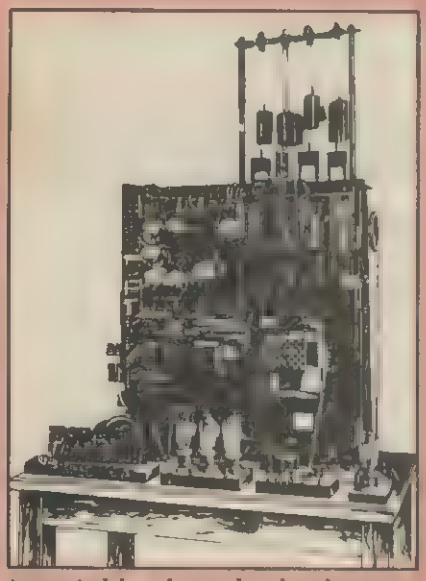


By Max Bramer

AFTER the hoax perpetrated in the mid 18th century by Von Kempelen's Chess-playing "automaton", the world had to wait until the end of the 19th Century for the genuine article.

The Spaniard, Leonardo Torres y Quevedo (1852-1936) was an early pioneer of dataprocessing and a prolific inventor. He built an electro-mechanical device to play the basic endgame of King and Rook against King.

The machine, which appeared in the 1890s, always played White (the stronger side) and



invariably forced checkmate, although frequently not in the smallest number of moves necessary.

Torres' principle motive for building the machine, was to disprove the argument that automation could never be used for tasks which required the "intervention of the mental faculties".

In 1975, Donald Michie, Professor of Machine Intelligence at the University of Edinburgh, published a reconstruction of Torres' algorithm in modern "decision table" form.

Michie states that in the worst case, it can take 62 moves for White to win (compared with a "theoretical" maximum of 16 needed from any starting position). White's play is painfully slow and tedious, as the reader will soon discover by choosing one or two starting positions and following through a "Torres strategy" for White in each one.

Producing an efficient algorithm remotely comparable to that of Torres in terms of compactness took almost 90 years further to achieve. The machine is now housed in the museum of the Polytechnic in Madrid.

Delegates at a conference on *Advances in Computer Chess* at Imperial College, London, in April were fascinated by a description by Ken Thompson (of Bell Laboratories) of his special-purpose chess machine named Belle.

Belle is an almost frightening example of the power of microchip technology. It can generate a candidate move for consideration in just over one two-millionth of a second and examines 160,000 positions per second. It uses a pre-stored opening "book" with 300,000 positions, compared with an estimated 200,000 positions in each volume of the *Encyclopedia of Chess Openings*. The entire book is scanned in one and a half seconds!

The speed with which this machine was developed is also incredible. The first "light" design was in February 1980, when the components (approximately 1,700 chips) were ordered. It played its first move in July, won a celebrated simultaneous game with Pfleger in Hamburg in August, won the third World Computer Chess Championship in Linz last autumn with a score of 4½/5 and has won several human tournaments since then.

Belle now has an official E.L.O. rating of 2140 and could well go much higher.

**To dispel any feelings of overconfidence about the "state-of-the-art" of computer chess in the 1980s, here are the first few moves of two games from last years' first world microcomputer championship in London.**

**Black on both occasions was the aptly-named program, Albatross:**
**1. P-Q4, P-K3; 2. N-KB3, P-Q4; 3. N-B3, B-K2; 4. B-B4,Q-Q3??**
**1. P-Q4, P-K3; 2. N-KB3, P-Q4; 3. N-B3, B-K2; 4. P-K4, PXP; 5. NXP, Q-Q4; 6. N-B3, N-QB3??**

**I shall return to the subject of computer blunders next month.**

Here is one of its recent games, an excellent win against a senior U.S. master, Mike Valvo.

*White* M. Valvo *Black* Belle
3.P-QN3, P-KN3; 4.B-N2, B-N2; 5.P-N3, O-O; 6.B-N2, N-B3; 7.O-O, P-N3; 8.P-K3, B-N2; 9.Q-K2, P-K3; 10. P-Q3, P-Q4; 11.QN-Q2, P-Q5; 12.P-K4, P-K4; 13.N-R4, B-KR3!; 14.P-KB4? PXP; 15.PXP, N-R4!; 16.Q-N4, BXP!; 17.RXB? N-K4; 18.Resigns

White loses the Rook and is then the exchange and a Pawn down in a hopeless position.

White's 13th move is dubious but Black's combination is surprising, and clearly foreseen on his 13th move (or 13 . . . B-KR3 is inexplicable). After 15 . . . N-R4, White cannot avoid losing material.

| The black king | | | | | |
|---|---|---|---|---|---|
| is in the same zone as the rook | is not in the same zone as the rook and the vertical distance between the black king and the rook is | | | | |
| | more than one square | one square, with the vertical distance between the two kings being | | | |
| | | more than two squares | two squares, with the number of squares representing their horizontal distance apart being | | |
| | | | odd | even | zero |
| The rook moves away horizontally (to the rook file of the other zone, 1 | The rook moves down one square 2 | The king moves down one square 3 | The rook moves one square horizontally 4 | The white king moves one square towards the black king 5 | The rook moves down one square 6 |

**Torres' algorithm, which divided the board into three zones of 3, 2 and 3 ranks.**

# Acorn Atom

# 747

**FLIGHT SIMULATION PROGRAM FOR THE 12K ATOM**

Written for Bug-byte by a 747 pilot. Accurate simulation of a 747's cockpit display (airspeed, altitude, rate of climb, attitude, flaps, etc., and graphic display of horizontal situation and attitude); allows you to guide your craft to the landing strip. On making your final approach the display changes to a high-resolution 3D representation of the runway coming up to meet you. A real test of skill. Finding the runway is quite a challenge — landing safely is even more difficult. If you succeed, you are awarded a skill rating and the chance to take off and try again.

REQUIRES FLOATING POINT ROM **PRICE ONLY £8.00**

Circle No. 108

# GO GO GO

**By Allan Scarff**

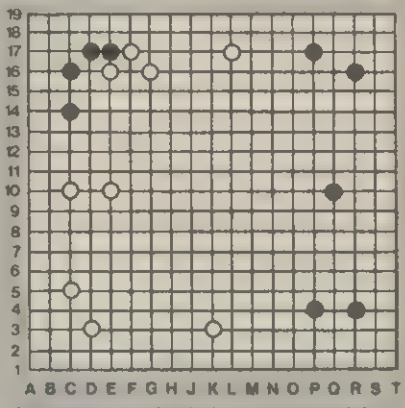
**GO is the most popular board game in the world. If you haven't heard of it, that's because most Go is played in China, Japan and Korea. But Go is coming west fast.**

**In the UK, Go has found popularity with computer professionals, but it is the advent of the personal computer which offers the greatest opportunity to develop computer Go. Perhaps there already exist hundreds of Go programs? (If so, please write and tell me about yours!)**

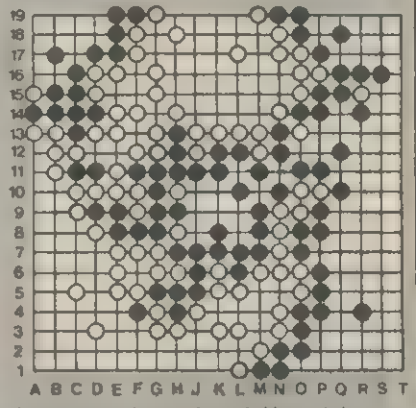
**Go is, in essence, a very simple game. The playing pieces, called "stones", are black for one player and white for his/her opponent. Play consists of the contestants placing, in turns, a single stone on the intersections of a 19 × 19 grid. Each player attempts to surround territory; first sketching it out, then fighting to hold it and capture his opponent's areas, until the boundaries are completed. The winner is the contestant with the most territory and captive stones combined.**

**Go originated in China over 4,000 years ago, perhaps as a primitive abacus, but more likely as a method of divination. The board can represent the universe, the black and white stones the two universal elements, negative and positive, or yin and yang. In Japan as well as China, Go became very popular amongst warriors. It proved ideal for devising military tactics. Indeed, in more recent times the Vietcong included Go in their military training for officers (some would say to devastating effect!)**

**Its simple rules allow Go to be played in a simple fashion almost like the children's game, "boxes". Part of its charm is that in these circumstances the outcome is by no means predictable. But the game can be played at many levels of skill. At the higher levels, Go is revealed as the most subtle and profound board game of them all (including that modern upstart, Chess!).**



The players have sketched out areas around the edges of the board.



At completion: the two players hold onto their areas but black gained more territory than white (opponent stones behind enemy lines are captive)

GO affords many levels of programming challenge, from the very simple to the ultimate challenge — an intelligent program. It is possible to develop your Go program one step at a time, each step giving a useful program.

The first step is to use your V.D.U. screen as a board. The simple elements of the grid and circles for stones are relatively easy to represent.

Secondly, build in game recording and playback. No Go player should be without such a program! It can do for Go what video recording did for sport. You can relive your triumphs and catastrophes. You can analyse in slow motion the critical points, perceive the sweep of events by fast replay, even obtain an entirely different perspective by reversing the playback.

And all at the push of a button!

Next you should build in the rules of Go. Two novice players can then play without fear of inadvertent illegal moves. Captured stones should disappear automatically and illegal moves should be firmly rejected (with appropriate sound effects!)

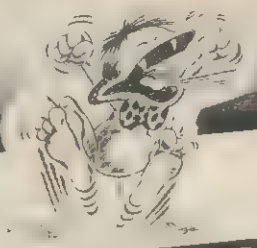
Now you can include an evaluation routine to count territory not only when play has finished (enabling the program to announce the winner) but also during the game. The difficult part is getting the program to decide sensibly where the individual areas are, before they are completely formed.

The above four steps bring your Go program to the brink of taking on an active role as a player. Avoiding the distractions of adding more facilities for archiving, displaying and evaluating the game of Go, the next step is to include a crude move generator. One method is to use a random number generating routine to provide candidate moves. If the move turns out to be legal and does not decrease the computer's score (as determined by the territory evaluation routine), the program should accept the move. If not, it should generate another. Your program will now play Go . . . very, very badly! However, this in itself is valuable for a beginner — we all like to beat somebody! It's also interesting to see by how much you can win.

Improving the play of your Go program provides a fascinating study into the concepts of both Go and programming. Unlike Chess, nobody has ever been able to write a Go program that plays really well. What takes the machine an hour to calculate in Chess, would take a millennia in Go. There are just too many possibilities. Advances in programming Go will inevitably rely on new ideas, not on massive computing power. The micro is as suited to this task as the largest machine. Thus micro Go provides the ultimate programming challenge.

● Allan Scarff's next article, which explains the rules of Go and the first steps to "Micro" Go, will appear in our March issue. Next month Alan Hiron looks at programming Bridge.

# Brainwave



## MIND ROUTINES

A man's wife normally drives to the station to meet her husband on the 5 p.m. train.

Her average speed in m.p.h., the time in minutes for her journey and the distance in miles from her home to the station are all whole numbers. (Her speed exceeds 15 m.p.h. but never 60 m.p.h.)

The train is early, however, it arrives at exactly the same time the wife is leaving home.

Since it has gone 5 o'clock the man starts walking at 3 m.p.h. towards home.

He meets his wife on the way and they eventually get home at an exact number of minutes to 6 o'clock.

The number of minutes the train was early is not an exact multiple of the number of minutes they were home early.

(1) How early was the train?

(2) And how far away did she live?

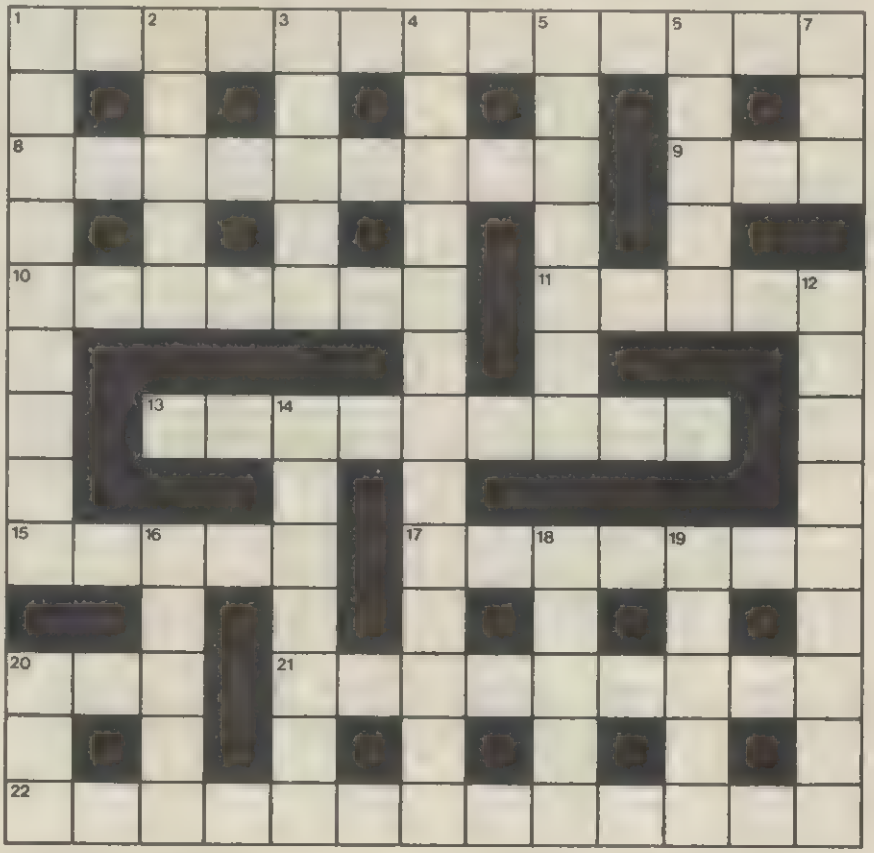
## WIN OUR CHAMPAGNE

Two bottles of champagne are up for grabs on this page every month. The first correct answers out of the hat for both the Mind Routines problem and the crossword on 15 December will have bottles of champagne rushed to them. Ian Pedder's Mind Routines problem will test both your ability to think through a puzzle and set it out as a program. These lend themselves to solving by program. If you are more literary minded try Nevera's Crossword and see how you get on.

See page 9 for the solutions to the first issue's puzzle and crossword.

● For details of *Computer & Video Games* competition rules see page 11.

## NEVERA CROSSWORD



**Across**

1. Do they keep 19's player's trousers up? (8, 5)
8. A micro often does when a sum is late. (9)
9. Basic function of the sun. (3)
10. Management Information System user of poor quality. (7)
11. Round number. (3, 2)
12. I'm put off the cuff around the PROM. (9)
15. 2 killed by Video. (5)
17. Allay on apple case statement by removing 150 characters. (7)
20. The number system Capone left last month. (3)
21. A set theoreticians level of pay. (5, 4)
22. Just the number for a bubble sort. (8, 5)

**Down**

1. Language maker. (9)
2. Basic star. (5)
3. Commands the syntax of a programming language. (5)
4. Mathematical Insertion into plate iron. (13)
5. End of the line from the micro. (3, 4)
6. Game in which to plot together. (5)
7. Evil Function. (3)
12. Step for a king in the hard stuff. (9)
14. Hardware result of 4. (7)
16. Non-alphanumeric character as above. (5)
18. Shut away the plotter won't draw with this. (3, 2)
19. A seaman — one who became a micro manufacturer. (5)
20. There's nothing loud when the machine's in this state. (3)

# Make the most of your Sinclair ZX Computer...

# Sinclair ZX software on cassette.

## £3.95 per cassette.

The unprecedented popularity of the ZX Series of Sinclair Personal Computers has generated a large volume of programs written by users.

Sinclair has undertaken to publish the most elegant of these on pre-recorded cassettes. Each program is carefully vetted for interest and quality, and then grouped with other programs to form a single-subject cassette.

Each cassette costs £3.95 (including VAT and p&p) and comes complete with full instructions.

Although primarily designed for the Sinclair ZX81, many of the cassettes are suitable for running on a Sinclair ZX80 – if fitted with a replacement 8K BASIC ROM.

Some of the more elaborate programs can be run only on a Sinclair ZX Personal Computer augmented by a 16K-byte add-on RAM pack.

This RAM pack and the replacement ROM are described below. And the description of each cassette makes it clear what hardware is required.

### 8K BASIC ROM

The 8K BASIC ROM used in the ZX81 is available to ZX80 owners as a drop-in replacement chip. With the exception of animated graphics, all the advanced features of the ZX81 are now available on a ZX80 – including the ability to run much of the Sinclair ZX Software.

The ROM chip comes with a new keyboard template, which can be overlaid on the existing keyboard in minutes, and a new operating manual.

### 16K-BYTE RAM pack

The 16K-byte RAM pack provides 16-times more memory in one complete module. Compatible with the ZX81 *and* the ZX80, it can be used for program storage or as a database.

The RAM pack simply plugs into the existing expansion port on the rear of a Sinclair ZX Personal Computer.

### Cassette 1 – Games

*For ZX81 (and ZX80 with 8K BASIC ROM)*

ORBIT – your space craft's mission is to pick up a very valuable cargo that's in orbit around a star.

SNIPER – you're surrounded by 40 of the enemy. How quickly can you spot and shoot them when they appear?

METEORS – your starship is cruising through space when you meet a meteor storm. How long can you dodge the deadly danger?

LIFE – J. H. Conway's 'Game of Life' has achieved tremendous popularity in the computing world. Study the life, death and evolution patterns of cells.

WOLFPACK – your naval destroyer is on a submarine hunt. The depth charges are armed, but must be fired with precision.

GOLF – what's your handicap? It's a tricky course but you control the strength of your shots.

### Cassette 2 – Junior Education: 7-11-year-olds

*For ZX81 with 16K RAM pack*

CRASH – simple addition – with the added attraction of a car crash if you get it wrong.

MULTIPLY – long multiplication with five levels of difficulty. If the answer's wrong – the solution is explained.

TRAIN – multiplication tests against the computer. The winner's train reaches the station first.

FRACTIONS – fractions explained at three levels of difficulty. A ten-question test completes the program.

ADDSUB – addition and subtraction with three levels of difficulty. Again, wrong answers are followed by an explanation.

DIVISION – with five levels of difficulty. Mistakes are explained graphically, and a running score is displayed.

SPELLING – up to 500 words over five levels of difficulty. You can even change the words yourself.

### Cassette 3 – Business and Household

*For ZX81 (and ZX80 with 8K BASIC ROM) with 16K RAM pack*

TELEPHONE – set up your own computerised telephone directory and address book. Changes, additions and deletions of up to 50 entries are easy.

NOTE PAD – a powerful, easy-to-run system for storing and retrieving everyday information. Use it as a diary, a catalogue, a reminder system, or a directory.

BANK ACCOUNT – a sophisticated financial recording system with comprehensive documentation. Use it at home to keep track of 'where the money goes,' and at work for expenses, departmental budgets, etc.

### Cassette 4 – Games

*For ZX81 (and ZX80 with 8K BASIC ROM) and 16K RAM pack*

LUNAR LANDING – bring the lunar module down from orbit to a soft landing. You control attitude and orbital direction – but watch the fuel gauge! The screen displays your flight status – digitally and graphically.

TWENTYONE – a dice version of Blackjack.

COMBAT – you're on a suicide space mission. You have only 12 missiles but the aliens have unlimited strength. Can you take 12 of them with you?

SUBSTRIKE – on patrol, your frigate detects a pack of 10 enemy subs. Can you depth-charge them before they torpedo you?

CODEBREAKER – the computer thinks of a 4-digit number which you have to guess in up to 10 tries. The logical approach is best!

MAYDAY – in answer to a distress call, you've narrowed down the search area to 343 cubic kilometers of deep space. Can you find the astronaut before his life-support system fails in 10 hours time?

### Cassette 5 – Junior Education: 9-11-year-olds

*For ZX81 (and ZX80 with 8K BASIC ROM)*

MATHS – tests arithmetic with three levels of difficulty, and gives your score out of 10.

BALANCE – tests understanding of levers/fulcrum theory with a series of graphic examples.

VOLUMES – 'yes' or 'no' answers from the computer to a series of cube volume calculations.

AVERAGES – what's the average height of your class? The average shoe size of your family? The average pocket money of your friends? The computer plots a bar chart, and distinguishes MEAN from MEDIAN.

BASES – convert from decimal (base 10) to other bases of your choice in the range 2 to 9.

TEMP – Volumes, temperatures – and their combinations.

### How to order

Simply use the order form below, and either enclose a cheque or give us the number of your Access, Barclaycard or Trustcard account. Please allow 28 days for delivery. 14-day money-back option.

Circle No. 109

# Sinclair ZX81 Personal Compu
# the heart of a system that grows with you.

1980 saw a genuine breakthrough – the Sinclair ZX80, world's first complete personal computer for under £100. Not surprisingly, over 50,000 were sold.

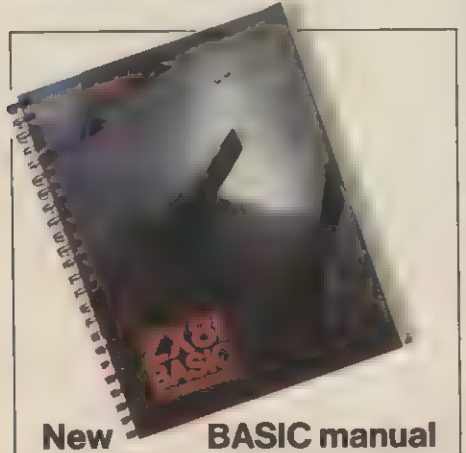
In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand – over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day.

**Lower price: higher capability**
With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working capability than the ZX80.

It uses the same micro-processor, but incorporates a new, more powerful 8K BASIC ROM – the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements – the facility to load and save named programs on cassette, for example, *and* to drive the new ZX Printer.



Every ZX81 comes with a comprehensive, specially-written manual – a complete course in BASIC programming, from first principles to complex programs.

## Kit: £49.95

**Higher specification, lower price – how's it done?**
Quite simply, by design. The ZX80 reduced the chips in a working computer from 40 or so, to 21. The ZX81 reduces the 21 to 4!

The secret lies in a totally new master chip. Designed by Sinclair and custom-built in Britain, this unique chip replaces 18 chips from the ZX80!

**New, improved specification**
- Z80A micro-processor – new faster version of the famous Z80 chip, widely recognised as the best ever made.
- Unique 'one-touch' key word entry: the ZX81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.
- Unique syntax-check and report codes identify programming errors immediately.
- Full range of mathematical and scientific functions accurate to eight decimal places.
- Graph-drawing and animated-display facilities.
- Multi-dimensional string and numerical arrays.
- Up to 26 FOR/NEXT loops.
- Randomise function – useful for games as well as serious applications.
- Cassette LOAD and SAVE with named programs.
- 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.
- Able to drive the new Sinclair printer.
- Advanced 4-chip design: micro-processor, ROM, RAM, plus master chip – unique, custom-built chip replacing 18 ZX80 chips.

## Built: £69.95

**Kit or built – it's up to you!**
You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus, of course the other discrete components) – a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor – 600 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder.

puter-

## Available now- the ZX Printer for only £49.95

Designed exclusively for use with the ZX81 (and ZX80 with 8K BASIC ROM), the printer offers full alpha-numerics *and* highly sophisticated graphics.

A special feature is COPY, which prints out exactly what is on the whole TV screen without the need for further intructions.

At last you can have a hard copy of your program listings – particularly useful when writing or editing programs.

And of course you can print out your results for permanent records or sending to a friend.

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your computer – using a stackable connector so you *can* plug in a RAM pack as well. A roll of paper (65 ft long x 4 in wide) is supplied, along with full instructions.

## 16K-byte RAM pack for massive add-on memory.

Designed as a complete module to fit your Sinclair ZX80 or ZX81, the RAM pack simply plugs into the existing expansion port at the rear of the computer to multiply your data/program storage by 16!

Use it for long and complex programs or as a personal database. Yet it costs as little as half the price of competitive additional memory.

With the RAM pack, you can also run some of the more sophisticated ZX Software – the Business & Household management systems for example.

**How to order your ZX81**

BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day.

BY FREEPOST – use the no-stamp-needed coupon below. You can pay by cheque, postal order, Access, Barclaycard or Trustcard.

EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option. We want you to be satisfied beyond doubt – and we have no doubt that you will be.

Circle No. 110

## SHOOT-OUT, CHESS AND DRAUGHTS

Perfect your marksmanship in a shoot out to the death in the desert sands of the wild west.

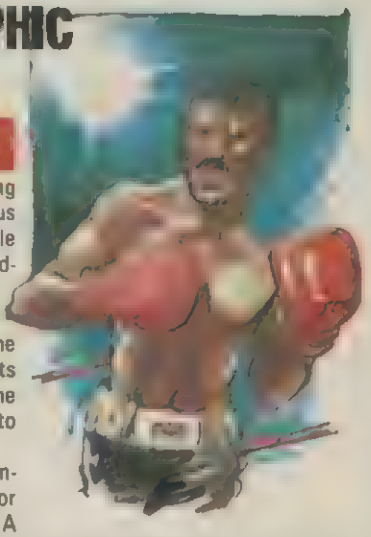
That's the theme of one of the new games for the Acetronic MPU1000 home video games centre. Either play against the computer or take on a friend or foe in this captivating game called Shoot Out.

The tension and excitement of those lawless days of gunfights are all there for £14.95. You take the part of one of the cowboys on the screen, who is in a gunfight and must save his skin by being quick off the draw.

Two other additions for the Acetronic range include chess and draughts which follow the format of traditional computerised games and sell for the same price as Shoot Out. Chess and draughts are available direct from Ace or through the firm's distributors in the UK.

## WHAT A GRAPHIC KNOCK-OUT

### BOXING



Landing a K.O. blow in the boxing ring is an exhilaration few of us will ever know but it is possible to relive some of the cut-and-thrust of the sport in the new Intellivision cartridge.

Boxing is now added to the long list of Intellivision sports cartridges which show off the machine's graphic qualities to best effect.

It's "seconds out" as you control one of the boxers fighting for survival in a tournament match. A clock on the platform stage in the righthand section of the screen ticks off the seconds of each round and the entire picture is dealt with in the usual perspective.

As with most of the Intellivision games arms and legs bend in the right places so the figures appear to be really moving and not as if they are suffering from a severe case of arthritis of the joints.

Points are scored for every blow each of the players strike and penalties given for below-the-belt punches. The winner is the player with the most points at the end of a bout or a win from a knock-out.

Boxing is available from the Intellivision Major League Sports Network range through UK distributors Ace (Advanced Consumer Electronics) of Wembley. Its retail price is marked at £18.95.

Space Armada is of the space invader version for the Intellivision. It has some graphically interesting aliens and costs £18.95. Otherwise the tactics are in the time-honoured tradition.

## NO TIME TO HANG AROUND

### DRAG RACING AND LASER BLAST

There's no time to hang around in the sport of Drag Racing and if you like your thrills short and sharp, you should enjoy the new television version.

When the game is mastered, a race can take as little as six to seven seconds — and from then on it's just a question of how many .01s of a second you can shave off your best time.

Mastering this cartridge is a real test of reactions and understanding. Two cars wait on a screen, revving away as the starter counts down from 10. As he reaches "one" it's both fingers on the accelerator button and a swift change into first gear, second, third and fourth, follow swiftly with perfect changes taking place that split second before the red revs line moves into blow-out mode.

It can make frustrating learning as itchy fingers push too early or too long in the search for a good time. The sound effects are convincing but the graphics are all too ordinary and capture none of the thrills and colour of the real thing.

The cartridge is produced for the Atari by US firm Activision and distributed over here by Computer Games for £16.95.

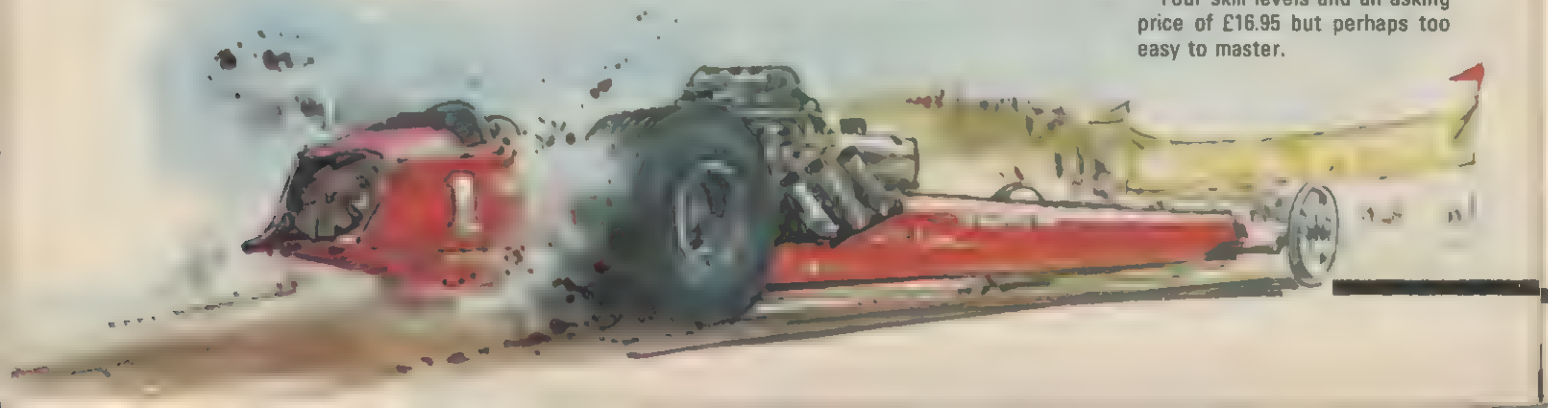
Also new out from Activision is Laser Blast, the game which reverses the usual alien descending from the heavens role.

Satisfyingly brilliant laser flashes illuminate the night sky as you guide your fleet of flying saucers over the planet's defences.

The defences come in threes. They roll along the ground beneath your ships and home in swiftly with their deadly fire.

Shots from your own saucer are just as lethal as you soar above the ground forces — unfortunately, at just the height to give them the best chance of hitting you. When all three laser stations have been destroyed, the next three roll on to the screen. You have just three reserves to call on but have the additional advantage of being able to pilot your wrecked ship on to the defenders. Further reinforcements are available with each score of 10,000 and after some initial low scores, a dedicated player can reach this score for the loss of each life — and so keep going ad-infinitum.

Four skill levels and an asking price of £16.95 but perhaps too easy to master.



# VIDEOSCREEN

## WHEN BARONS SQUABBLE

In feudal times the all-powerful barons ruled their fiefdoms from castle strongholds and any squabbles were resolved by seige using the most awesome weapons of the day — the catapulted firebomb.

This is the backdrop to the latest Atari T.V. video game centre cartridge called Warlord, which takes players back to those lawless days.

Four sons of King Frederick were banished because of their evil ways and from then on they were constantly at each others throats battling one another for dominance of a territory. The object of the game is to re-enact those battles and beat the other princes into submission.

The player takes the part of one of the four princes defending his castle and attacking his brothers'.

Using the paddle controller you manoeuvre the protective shields against the fire balls which bounce between the castles. They have to break down the walls of your castle before they can aim a shot at your warlord. A direct hit puts the castle out of the game.

It's the best of five games in which to conquer your rivals. The pack is written with three main variations, the number of players, the speed of the balls and the shields.

One to four players can play, or you can play doubles. The ball speed can be either fireball or lightning ball and the shield has a dual function. You can either use it to ricochet balls or you can use it to catch opponents balls and release them at high speed. This cartridge costs £23.95 from distributors, Ingersoll.

## TUNING UP ON YOUR PHILIPS KEYBOARD

For the musical minded there is a new game out to teach you to tune in and play by ear.

Called Musician, the pack incorporates an overlay keyboard which is put on top of original keyboard to look like piano keys. It is out now for the Philips G7000 T.V. games centre.

Even if you know nothing about playing or writing music this cartridge will present no problems. The notes that you strike on the piano keyboard are displayed on the screen on bass and treble staves with the note's name written underneath. Simultaneously the sound of the note is played when you press the key. So you soon recognise the note and its correct pitch.

You can program in your own melodies and edit them if you dislike the final outcome. There are also record and playback facilities for you to check what tune you have written.

Coming with the Videopac is a full instruction leaflet telling you exactly what notes you can use to write a tune. It also contains tunes which you can program in if your creative/streak is lacking. Three of those included are Sur le Pont d'Avignon, Muss I'Denn and Limehouse Blues.

The Musician retails for double the usual price of Videopacs at about £25.

## CAROLS FOR CHRISTMAS

Musical Memory will give carol lovers an extra bit of seasonal flavour this Christmas.

There are 36 different notes for the musically gifted to play with, to either invent your own tunes or recreate old favourites — already written into the game's memory is that well known ditty, When the Saints Go Marching In.

If the key of the melody doesn't sound quite right, it and the speed, can be altered. The composer can see the music as he writes it on the five bar staves, making alterations and editing the tune as he goes along.

Adding an extra dimension to the game are a couple of variations including a version of the popular musical memory game, Simon with both four and six colour options.

This new addition to the Database T.V. game centre's software range costs £14 and is obtainable directly from the manufacturers, Voltmace, or from the firm's distributors.

An improved version of space invaders has also been brought out. The original version, called Alien Invasion, was said by Database users to be too slow and too easy to master. The renamed game, Earth Invasion is much faster. The waves of aliens increase their speed across the screen more quickly. Apart from the extra speed the game contains the same features, £14.

## SHARPEN UP YOUR FLIPPER SKILLS

Pinball players can sharpen up their flipper skills at home before going out and impressing their local arcade users.

Database has just added this game to its list of cartridges available this Christmas. Pinball's rules are — faithful to most arcade games — the player striving to keep the ball in play for as long as possible to build up the highest score.

With eight different skill versions of Pinball on the cartridge it gives players of all capabilities a chance to have a go. In all variations you have five "balls" to play with but games can either be played with single or double flippers.

Four of the games are more difficult because they are faster and the difficulty increases when you pass the 200 points mark. Then the flippers get further and further apart leaving a larger gap for the ball to escape through.

No tilting and no cheating in this game! If you keep your finger constantly on the "fire" button so that the flippers are flying all the time, you will only decrease your score — quickly.

You can get hold of a Pinball cartridge directly from Hertfordshire-based Voltmace for £14.

## THE OLYMPIA — POST OFFICE APPROVED TELEPHONE ANSWERING MACHINE WITH REMOTE CALL-IN BLEEPER

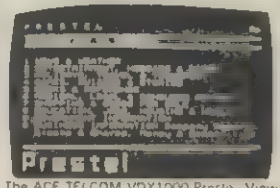
This telephone answering machine is manufactured by Olympia Business Machines one of the largest Office Equipment manufacturers in the U.K. It is fully POST OFFICE APPROVED and will answer and record messages for 24 hours a day. With your remote call in bleeper you can these messages by telephone wherever you are in the world. The remote call in bleeper activates Answer Record Unit which will at your command repeat messages, keep or erase them and is activated from anywhere in the world or on your return to your home or office. The machine can also be used for message referral if you have an urgent appointment but are expecting an important call simply record the phone number and location where you can be reached. With optional extra bleepers (£13 each) this facility can be extended to colleagues and members of the family. Using a C90 standard cassette you can record as many as 45 messages. The announcement can be up to 16 seconds long and the incoming message up to 30 seconds long.

The machine is easy to install and comes with full instructions. It is easily wired to a junction box with the spade connectors provided or alternatively a jack plug can be provided to plug into a telephone. Most important of course it is fully POST OFFICE APPROVED.

The price of £135 (inc VAT) includes the machine an extra light remote call in Bleeper the microphone message tape A C mains adaptor. The unit is 9¾" x6 x2" and is fully guaranteed for 12 months. The telephone can be placed directly on the unit no additional desk space is required.

£135

## PRESTEL VIEWDATA



The ACE TELCOM VDX1000 Prestel View data adaptor simply plugs into the aerial socket of your television and enables you to receive the Prestel Viewdata service in colour or black & white.

Features

- for quick
- for
- colour encoder and data line incorporate for picture interference maximum
- convenient TV Prestel switch
- connected to standard telephone lines

Fully Post Office approved

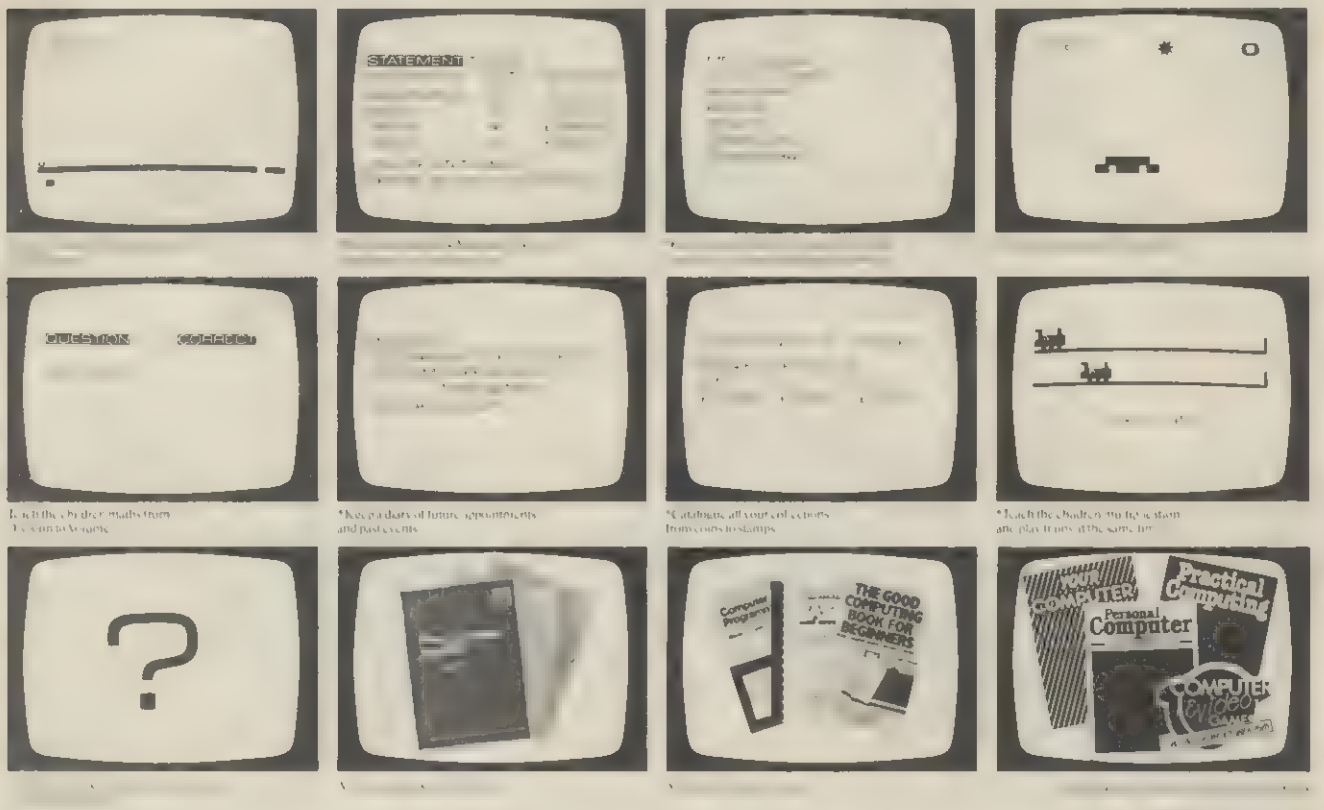
# What would I do with a computer?



# The first personal computer that only adds up to £69.95

You'll be surprised how much you can do with a personal computer and even more surprised at how little it costs.

We made it our business to find not only the best-value-for-money computer on the market, but also the best books to enable you to progress from a beginner to an advanced user. And W.H. Smith is the only retail chain where you can buy the incredible ZX81.

The Sinclair ZX81 is a masterpiece of design. Which is why it can carry out programs you'd normally expect from more expensive computers.

Although the ZX81 is fast and powerful, it's also simple to use. Within hours you can learn to run programs and within a week you could be writing your own complex programs. All you need is your own TV (any model that receives BBC2) and a cassette player when using pre-programmed cassettes. And W.H. Smith have a range available from £3.95 each.

So take your first steps in computing at W.H. Smith and make your life easier to run.

# Adventure

**A swift glance down most software catalogues will reveal a veritable hoard of Adventure games.**

**They compete with Space Invader and Asteroid type games for the top-of-the-micro-pops. Which you prefer depends on whether you like to test your reactions and control, or are the mystery-loving puzzle-solver type (these are by no means mutually exclusive).**

**If you are new to Adventure and wondering which to try first, or if you are just wondering which to buy next, I will be helping to guide you through the Adventure jungle each issue. A brief rundown of what to expect from each Adventure, will help you select tapes and discs to suit your taste a little less randomly.**

SCOTT Adams is the name behind a whole library of Adventures and his games have introduced many enthusiasts to micro adventuring. My own introduction was his Adventureland on a friend's machine. It is set in a swampy forest near a sunny meadow and progresses underground to a maze of pits.

Various things lying about the place seem rather innocuous, but as the game develops a feeling grows that most objects have a purpose, and that some very devious thinking will be needed to find uses for, among other things, an empty wine bladder and patches of oily slime! The large dragon, peacefully sleeping in the meadow, begs a good hard kick to wake him up — is he really as impervious to attack as he seems? And the "No Swimming" sign by the lake is positively urging you to take a dip — but with what consequences? The object of the game is to collect and store 13 treasures. To say more would be to give away too much.

So I'll merely say "Bunyon" and vibrate on to another Scott Adams' game — Pirate Adventure. A strong theme runs through this game which is littered with bottles of rum, treasure chests, anchors and a parrot, which is not only excessively greedy but very loquacious.

The story begins in the player's London flat, from where, after some chilling discoveries, it moves to Pirate Island. There it soon becomes apparent that you are being urged to do something without being told quite what.

Pirate is not as deep as Adventureland and the machine's memory is not so fully packed. But this is more than offset by a delightful sense of humour running through the game, climaxed by a cruel and dramatic hoax.

Both these games are available on the 16K TRS-80 and Video Genie; the 16K Exidy Sorcerer; 24K Apple 2 and Apple 2 Plus.

The Adventure series by Scott Adams, currently comprises 10 games. All games are written in machine code and have a "save game" feature enabling the current state of the game to be recorded and reloaded later.

Each month I shall be bringing you tips on how to write an Adventure program in Basic. In order to do this you will require a machine with at least 8K RAM and capable of holding many string variables, arrays (single dimension will do). It will also need string manipulation statements like: MID$, LEFT$, RIGHT$, LEN, plus the ability to concatenate.

Having devised your plot and drawn a map the next step is to number the locations from zero, and draw up a table. For simplicity I have shown a five location map in Figure 1 and the corresponding table in Figure 2. All exits in the example are compass bearings, hence the exit column entry for location 0 shows "ES"—E(ast S(outh) leading to destinations in the corresponding positions of the destination column entry, of locations 1 and 2 respectively. If more than 10 locations were to be used, double figures would be needed in the destination column.

Type the contents of the table, omitting the number column, row by row into data statements. Part of your program will now look like this:

```
DIM L$(4), E$(4), D$(4)
For I = 0 TO 4: READ
L$(I), E$(I), D$(I): NEXT
DATA COTTAGE, ES, 12, LANE,
   WS, 03, FOREST . . .
```

and your logical network is formed!

Putting aside sophisticated word decoding routines for the moment, we can test this network out with the following simple routine:

```
150 (clear screen): LN = 1: REM
   CURRENT LOCATION IS 1
160 PRINT "I AM IN A "; L$(LN)
170 INPUT "WHERE TO NOW";
   R$ (clear screen): REM ANS-
   WER N, S, E or W
180 R$ = LEFT$(R$, 1)
190 FOR I = 1 TO LEN(E$(LN) )
200 IF MID$ (E$ = VAL (MID$
   (D$(LN),I, 1) ): GOTO 160
210 NEXT
220 PRINT "I CAN'T GO THERE" :
   GOTO 160
```

To place objects in these locations is now quite easy. Make an object table as in Figure 3 using array P to hold the current location of each object. Read this in from data statements as with the locations. Now add these lines to those above, and Hey Presto!

```
165 OS$ = "I CAN SEE ": FOR I = 0
   to 3
166 IF P(I) = LN THEN OS$ =
   OS$ + O$(I)
167 NEXT: PRINT OS$
```

We can't manipulate the objects yet — that will come after we've had a look at word decoding next month.

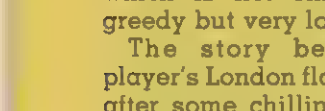

Fig. 1: Simplified network of locations showing initial positions of objects in brackets. Note: objects and locations independently numbered.

| No. | Location (Array L$ (4)) | Exits E$ (4) | Destination D$ (4) |
|---|---|---|---|
| 0 | Cottage | ES | 12 |
| 1 | Lane | WS | 03 |
| 2 | Forest | NE | 03 |
| 3 | Meadow | NWS | 124 |
| 4 | Lake | N | 3 |

Fig. 2: Location table derived from map in Fig. 1. The number column is merely the subscript used to access the information on a given line. Note all variables are character (string)

| No. | Object Array D$ (3) | Place P(3) |
|---|---|---|
| 0 | Knife | 0 |
| 1 | Fish | 4 |
| 2 | Cow | 3 |
| 3 | Axe | 2 |

Fig. 3: Object table derived from Fig. 1. Again the number column is the array subscript. Note that since array P will only hold the number of the current location of an object it may be defined as integer numeric

BY KEITH CAMPBELL

# TIPS

When the blown up asteroid sent out three arrow-head missiles on that first revenge mission, many players decided that Asteroids de Luxe was too hot for them.

A pity, because good use of the faster firing and moving advantages of the second generation Asteroids game, could still ensure a long play. And the new features make for a more entertaining play, than that offered by its popular predecessor. Here we tell the uninitiated what to expect from Asteroids de Luxe and offer a few hints on survival.

The first difference from the original game is that there are more meteors on the first screen, seven instead of four. But you will soon find that the faster firing button — it is possible to fire almost continuously — makes for more dramatic destruction.

This fire-power makes it easy to stand your ground when meteors are heading straight for you, as you should reduce them to smithereens before they become a real danger.

There is also the question of the shields. These are an improvement on the hyperspace panic button of the original, because there is no random luck element involved. However, timing is all important. New players tend to press the shields too early and waste this far from inexhaustible means of defence.

# ASTEROIDS DE LUXE

The U.F.O.s are a very different proposition in de Luxe. The small one is usually on patrol early and is far more deadly, hitting stationary targets with ease and also picking you off if you move in a straight line. So weave!

No point in leaving that last rock and waiting in a corner to build up a high score in this version either. The small U.F.O. responds by blowing up that last rock with its first shot and your ship normally follows soon after.

When the "geometric" asteroids begin appearing it is best to leave them until you have room to manoeuvre. when these are hit, three homing missiles are loosed upon you and fire and run tactics are the best way to reduce the threat of these splitting horrors.

As in the earlier Asteroid version, the best players learn how to use the thrust and keep on the move.

# STREET TALK

A brief rundown of machine slang: phrases and comments which players use while blowing up asteroids.

- Reggae rattle — a phrase to describe the constantly on the move player.
- Orgy of destruction — keeping up a constant stream of fire in an attempt to wear down the meteors.
- A bouncer — a player who makes good use of his shields.
- Bad boulder — a meteorite which will unleash missiles when blown up.

As far as we can tell there are no noticeable programming bugs in Asteroids de Luxe.

- Next issue we look at the popular but tactically difficult arcade game of Defender.

# ROYAL SNATCH AND GRAB

It's back in time, for once, in the King and Balloon aerial defence game.

Instead of the usual space invaders and laser bases, this game features balloons which descend from the heavens and crossbows.

The balloons are the villains of the piece, attacking in squadrons of 42 which will stretch your more primitive resources to their limits.

You play the part of a faithful marksman employed to defend the royalty of the castle from the aerial kidnappers.

Should the invaders snatch your monarch, he proves quite vocal, crying for aid from his retainer and a well aimed shot which downs the capturing balloon will enable him to parachute to safety murmuring his thanks.

When a squadron of balloons is downed by the crossbow a faster-moving one appears to attempt the next snatch and grab raid.

And should that royal figure disappear over the horizon, dangling captive from his basket, it's a case of: "The king is dead! Long live the king", as another is sent out to tempt the balloons back.

Up to three kings can be lost before the game is over.

A fun variation on the usual theme which is not too demanding graphically but still challenging.

# GOLF: NOT JUST FOR THE CLUBS

Japan goes in for crazes with such gusto that our flirtation with Rubik's Cube seems half-hearted by comparison.

So Pro Golf, which combined the crazes of golf and video games (two of Japan's biggest) was bound to be a hit over in the Orient.

But our own arcade industry is pessimistic about this graphically superb game finding a following over here. The game is certainly a far cry from the usual space-fodder fare to be found in pubs and arcades but it could worm its way into western hearts.

A nine hole golf course is to be played. Choose your club, address the ball and hit, before the golfer takes his fifth automatic swing, or you will lose your ball.

A limited number of balls are allowed per hole and if that is passed a golfer will also be lost. Trees, ponds, bunkers and out-of-bounds areas add to the difficulty. Each hole has its own par score and holes in one are possible.

A game which deserves to see a wider audience than just the "19th holes" of the golf clubs.

# KING KONG GOES CRAZY IN A CABINET

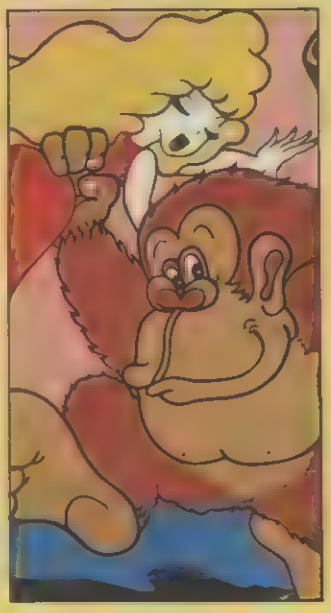
The box-office success, King Kong, now looks likely to become a success in a box — or at least an arcade cabinet — in the game Donkey Kong.

Kong has captured an electronic starlet and is holding her hostage at the top of the screen. He hurls down barrels at the rather unheroic rescue figure as he rushes up a series of tilting levels. The rescuer must leap over the oncoming barrels and so make his way to Kong's hideout. A hammer with which to knock the barrels clear of the level, can be reached by a well-timed leap skywards.

Once at the top, Kong realising he is beaten, picks up our heroine and carts her off to a new screen. here the rescuer must leap between passing lifts to attain the giant chimp's hideout.

On achieving this, the screen changes again to a conveyor belt affair and so the chase continues, with Kong hurling obstacles in the path of our plucky hero until the girl is finally saved . . . then it all starts again only with more obstacles.

Can Jumpman save the wretched heroine? Find out down your local arcade.



# AN AMPHIBIOUS ARCADIAN

The arcade games industry seems to have discovered a new hero figure to tempt us onto its machines.

It is questionable whether hard-bitten arcade and pub veterans, who are used to seeing themselves as laser bases or rocket ships, will be able to identify with this new character — a frog — but he seems to be cropping up in several games now.

Frogger is one of the popular new generation of arcade games which are getting away from space themes.

It does give an idea of how tough a life frogs may lead. Our intrepid amphibian is first set the problem of crossing a busy highway without getting run over.

Manoeuvring the creature by a joystick, either vertically or horizontally, it must avoid a steady stream of vehicles to reach the river bank. Here the aim is to cross without falling in, via a series of logs and the treacherous diving turtles, who are not averse to giving a hurrying frog an early bath.

Other terrors lurking here include deadly snakes, otters and crocodiles.

Points are scored for each safe jump (10), arriving safely home (50) and beating the timer (10 points per beat saved). Bonuses can be accrued by escorting home a lady frog (200), gobbling an insect (200) and safely getting all five frogs home (1,000).

# ALIENS ABOVE THE SKYLINE

Piloting your craft above a New York-like skyline gives you first taste of the Space Odyssey challenge — but the action does not stop there.

Space Odyssey is reminiscent of the Defender game but with a much less daunting array of buttons to become familiar with.

Just two buttons and a lever here. The buttons are simply "Fire" and "Bomb" and the lever gives you all the manoeuvrability you will need on the long voyage ahead of you.

Missiles are launched from the ground to prompt you forwards and a fleet of alien spacecraft speeds towards you. Firing to pick off those you can, while flying skifully to avoid the rest of the enemy craft and the tall buildings, you pick your way through the waves of attackers.

A regular feature of the early waves is the laser-firing Mothership Galactica, a large craft which appears initially to be indestructable but a little perseverance will prove otherwise. Later the action switches to a mountainous moonscape.

So the game progresses until you are speeding between large black holes which will draw you into their voids should you fly too close and leave you spinning and vulnerable to enemy fire. Then it is back to the opening sequence again.

The game is easy to learn, the action is always changing and the graphics and backdrops are among the best you will see. If you liked the idea of Defender but found it too difficult to master, Alca Electronics is distributing the game for you.

# GALAXIANS MARK II

The second generation of Galaxians is on its way to our arcade skies.

This new breed, which beares the Midway logo, do not sit passively in the skies waiting to be shot at but swarm in from the sides of the screen to form their convoy and then dive groundwards to put your laser station out of action.

Apart from this peculiar behaviour, the new creatures resemble and attack in the same fashion as the already popular Galaxians. And the action will be just as frantic as before.

One other important change is the name, this new breed answer to the name of Galgas.

Chomp runs on a Sharp MZ-80K
By Kent Walker and Terry Wrench

# CHOM

Arsenic and Old Lace's elderly poisoners probably played Chomp while waiting for their victims to tuck into their last supper.

The supper prepared on the Sharp screen in this game is going to be somebody's last too. The screen is set out like a large piece of cake but the piece in the top right hand corner could have been made by Lucrezia Borgia.

The fact that it is labelled "Poisoned" is a bit of a giveaway.

But the cake has to be finished so someone is going to end up eating the piece which will give them more than heartburn! The players take it in turns to Chomp on a piece of cake and try to manoeuvre their opponents so as to force them to eat from that poisoned section.

This game makes good use of the Sharp's musical facility and includes a fitting end to the game when that fatal Chomping has taken place.

Not for the queasy!

BREAKOUT RUNS ON AN ACORN ATOM IN 3·5K BY TIM JACKSON

# BREAKO

As a study in concentration and instinctive reations, it's hard to beat Breakout.

This is the second generation of "bat and ball" arcade games and the only one to still keep its place in the pub circuit.

The aim of the game is to demolish a brick wall by bounding a moving ball against it by use of a bat.

As the ball hits each brick it vanishes from the screen and the ball rebounds to be hit again. But should it slip past your bat then you lose a life.

The experienced Breakout player aims his ball continuously at a single spot in the wall to weaken it and let the ball through to wreak havoc on the other side. This gives him a respite while the ball bounces destructively behind the wall seeking a path back into play.

It makes for compulsive playing as the speeding ball defeats your attempts to return it. I don't know if it is popular in H.M. Prisons but Breakout is a simple but effective game which will keep the player on his toes.

APPLE

**GOAL IS AN APPLESOFT PROGRAM REQUIRING AT LEAST 16K.**

**BY FRED PENCE**

# GOAL

GOAL
GOAL

At the far end of the board, the Goal is beckoning as you and the computer plan your respective routes to victory.

The computer is out to make things difficult for you but achieving life's goals should never be easy.

Moving a single counter alternately you must aim to outwit your opponent and be first to move into that elusive Goal area and win the game.

You can choose who takes the first move in this game of strategy and thinking ahead. If you wish the computer to go first, enter nought, or key-in a number between one and six if you are taking the first move.

Once the counter is set in motion, it can only be moved left, right or down but it cannot be returned to a box it has already entered.

Good use is made of the Apple graphics in a well thought out game with plenty of scope for tactical maneouvring.

# MAPLIN for ATARI

AUTHORISED DEALER

ATARI®

# The World-beating ATARI PERSONAL COMPUTERS

3 consoles available

**Atari 400 with 16K RAM (AF36P) £345**

**Atari 400 with 32K RAM (AF37S) £395**

**Atari 800 with 16K RAM (AF02C) £645**
(expandable to 48K)

**All consoles when connected to a standard UK colour (or black and white) TV set can generate the most amazing graphics you've ever seen.**

*Atari 400 Console*

*Atari 800 Console*

***Look at what you get:***

* Background colour, plotting colour, text colour and border colour settable to any one of 16 colours with 8 levels of illuminance!
* Video display has upper and lower case characters with true descenders, double and quad size text and inverse video.
* 57-Key keyboard (touch type on Atari 400) and four function keys.
* Full screen editing and four-way cursor control.
* 29 keystroke graphics and plottable points up to 320 x 192 (160 x 96 only with 8K RAM)
* 40 character by 24 line display.
* Extended graphics control and high speed action using a DMA chip with its own character set.
* Player missile graphics
* Four programmable sound generators can be played individually or together and each has 1785 possible sounds playable at any one of eight volume settings, for game sounds or music.
* Full software control of pitch, timbre and duration of notes in 4-octave range.
* Four joystick or paddle ports, sounds output to TV.
* BASIC cartridge and 10K ROM operating system and full documentation

**MORE HARDWARE**

| | |
|---|---|
| Atari 410 Cassette Recorder (AF28F) | £50 |
| Atari 810 Disk Drive (AF06G) | £345 |
| Atari 822 40-column Thermal Printer (AF04E) | £265 |
| Atari 850 Interface (AF29G) | £135 |
| Joystick Controllers (AC37S) | £13.95 |
| Paddle Controllers (AC29G) | £13.95 |
| 16K RAM Memory Module (AF08J) | £65 |

**MUCH MORE FOR ATARI COMING SOON**

**SOFTWARE**

Lots and lots of amazing software for Atari available NOW

★ Word Processor ★ VISI CALC ★ ADVENTURE GAMES ★ Arcade Games ★ Trek Games ★ ASSEMBLER & DISASSEMBLER ★ FORTH ★ Teaching ★ 3D GRAPHICS ★ Character Set Generator

SEND S A E NOW FOR OUR LEAFLET (XH52G)

**LE STICK**

For Atari Computer or Video Game Replaces standard joystick, but much easier to use Internal motion detectors sense hand movements Large pushbutton on top of Stick Squeeze Stick to freeze motion A MUST for SPACE INVADERS STAR RAIDERS & ASTEROIDS ONLY £24.95 (AC45Y)

**SPECIAL PACKAGE OFFER**

Disk based system for £725 with Le Stick
The Atari 400 Console
Special 32K RAM Module
Atari 810 Disk Drive
Disk Operating System
Documentation
Interconnecting Leads
Everything in "Look at what you get" list

Can any other computer on the market offer all this at anything like this price?

**VERSAWRITER**

12½ x 8in drawing board Drawing on board is reproduced on TV via Atari with 32K RAM and Disk Drive Closed areas may be filled in with one of 3 colours Text may be added in any one of 4 fonts Paint brush mode select size of brush and paint away Air brush mode shade in your drawing colour and density is up to you Plus many more features S a e for price and further details

*Demonstrations at our shops NOW*
*See Atari at 284 London Road, Westcliff on Sea, Essex Tel (0702) 554000 and at 159 161 King St . Hammersmith W6. Tel 01 748 0926*

# ALL THE FRUSTRATION OF THE PUTTING GREEN

# MINI GO

BY MITCH VOTH AND RICH BOUCHARD

No municipal park, or seafront worthy of the rock bearing its name, should be without a putting green.

Those nine to 18 patches of well manicured turf which can divide friends and turn happy families into bitter rivals.

Remember that straggling white bush on the eighth, which belied its battered appearance and refused to surrender its white prize until the fifth stroke.

Or how about the fifth hole, whose cup protruded a solid half inch above the surrounding circle of dried and dented earth.

If someone were to write a thesis proving that that famous stiff upper lip was tempered on the putting greens of England . . . I wouldn't be at all surprised!

If you thought you had left those ninth green dandelion beheading tantrums behind you, this program will bring them back all over again. In fact the only putting frustration not to be experienced on this computerised version, is the wait for the previous group to move on.

Mini Golf is an excellent representation of a nine-hole miniature putting green, which will accommodate up to 10 players.

You control the angle of your putter by pressing the keys marked "+" and "*", which have small arrows marked on their upper left-hand corners.

The following strings should be typed using the Atari logo key to produce reverse video:
Line 10: "ATARI 9 HOLE", and "MINIATURE GOLF"
Line 40: "SCORE:"
Line 2000: "FINAL SCORE:"
Line 2040: "GOOD BYE."

The messages such as: "HOLE 1" and "PAR 2" should be typed using reverse video for all nine holes.

## THE LATEST AND, INDEED, THE GREATEST

### OF THE KANSAS ARCADE SERIES

# ARCADE SCRAMBLE

Don't waste your time playing the simple starts to the Big Five games — get straight into the heavy action with this brand-new multi-action, home grown 'Arcade' game.

Yes, it's the famous one of the Arcades, and the first time it's ever been achieved on a computer.

Not that easy though, for without warning suddenly there's a squadron of enemy fighters heading straight at you hell bent on your destruction. Then comes the ack-ack flung at you from the ground batteries to add to your difficulties, and there's the cluster of blimps to make things even more difficult.

But the real nasties are the rockets, which the enemy blast at you, without warning, from the ground installations.

Even if you manage to out-shoot, out-fight, out-manoeuvre that little lot, you still have the mountains to negotiate which is a problem with the fighters streaming through the only available space.

But with this really unbelievable game, you have no less than six different controls at your fingertips, being able to move your bomber forward, backward, up and down, whilst at the same time both firing your guns at the enemy and bombing the installations.

The installations include rocket launch pads, ack-ack batteries, forts, munition dumps and fuel dumps. You do your damnedest to destroy these as they unfold below, so building up your score.

There is so much happening it really is unbelievable with sound adding to the realism of this ultra-fast moving game.

**£9.50**

Programs are for the Tandy TRS 80 and Video Genie. All prices are VAT paid and postage free. Same day return first class post service. All software fully guaranteed and in stock as we are the actual publishers, not the retailers. Free catalogue upon request

# ZX80/81 HARDWARE/SOFTWARE

| | | | |
|---|---|---|---|
| 2K RAM PACK | £15.95 | ZX KEYBOARD | £27.95 |
| 4K RAM PACK | £22.95 | 16K SOFTWARE | |
| 16K KIT | £32.95 | CASSETTES | from £3.95 |

DEFLEX LIFE & 3D/3D £5 95 on one cassette

## RAM 80/81

**2K & 4K RAM**
Static Ram memory expansion for the 80/81. They both work with onboard Ram i.e. 4K plus onboard = 5K. This is the cheapest small memory expansion available anywhere.

**16K RAM**
Massive add-on memory for 80/81.

**16K KIT-A-KIT VERSION**
of a 16K Ram. Full instructions included. All memory expansions plug into the user port at the rear of the computer.

## 16K SOFTWARE

**As seen at the ZX Microfair.**
DEFLEX This totally new and very addictive game, which was highly acclaimed at the Microfair, uses fast moving graphics to provide a challenge requiring not only quick reaction, but also clever thinking. One and two player versions on same cassette. £3.95
3D/3D LABYRINTH You have all seen 3D Labyrinth games, but this goes one stage beyond; you must manoeuvre within a cubic maze and contend with corridors which may go left/right/up/down. Full size 3D graphical representation. £3.95
CENTIPEDE This is the first implementation of the popular arcade game on any micro anywhere. Never mind your invaders etc this is positively shining, the speed at which this runs makes ZX invaders look like a game of simple snap. £4.95

Please add £1.00 p/p for all hardware.
Software p/p free.
Specify ZX80/81 on order.

ALL OUR PRODUCTS ARE COVERED BY A MONEY BACK GUARANTEE

## KEY

A full size keyboard for the 80/81. The keyboard has all the 80/81 functions on the keys, and will greatly increase your programming speed. It is fitted with push type keys as in larger computers. The keyboard has been specially designed for the Sinclair computer and is supplied ready-built. It also has facilities for 4 extra buttons which could be used for on/off switch, reset, etc.

# POT

BY IVOR STONES

RUNS IN 3.5K ON A VIC-20

Not just anybody can get served in the Computer & Video Games City Saloon.

Newcomers are challenged to prove that they are good enough to drink with the other games players. The only way to prove what a games player's gotta prove, is by demonstrating your nerve and reactions in a few rounds of Pot Shot.

The bar tender will fill your glass and slide it along the bar top to you. It will go over the edge and fall to the floor. You must fire at just the right moment to hit the glass as it falls.

When you score six hits in one round, the game becomes harder and you have to hit just the handle for all subsequent rounds.

Don't worry about the bar bill, as many drinks as you want will be provided by your landlord, Vic!

Pot Shot is one of those deceptively simple but compulsive games. The graphics show just what can be obtained using the VIC-20's built-in character set.

Aspiring games writers would do well to note how well Pot Shot puts 10 of the golden game rules into practice:

1) It is visually novel.

2) As a reaction game it is hard but not so hard that maximum scores cannot be obtained.

3) As the player improves the game automatically gets harder.

4) The rules are easy to understand and are printed in an interesting way.

5) The game does not require constant resetting by the player-so no interruptions.

6) If no keys are pressed the "attract mode" shows game operation.

7) Appropriate sound effects add to the overall impact.

8) Complicated character strings have been put in as data statements and odd symbols have been kept to a minimum to aid entry by readers.

9) Key program sections indicated by REMarks.

10) The game makes the most of the computer's facilities and memory.

# An education in computers starts with you!

There is another side to microcomputing, just as interesting as games; especially if you are a responsible parent or a teacher with responsibility for teaching computing or using computers as teaching aids. Computers in Education is an important and expanding field the implications and potential is only just beginning to be realised If you have children, or are a teacher you have a responsibility to keep yourself informed of developments in this area. Educational Computing is written for you

Every issue is packed with useful and up to date information covering product news, conference news, opinions, advice application stories, case studies and a forum for you to discuss your concerns and interests

Each month we select a specific applications area In the past we have looked at such subjects as Mathematics, Home Economics, Business Studies and Engineering. In the coming months we will be looking at Social Sciences, English, Computer Science and History

We show the many interesting ways people are using computers as teaching aids. And give practical advice and guidance

Educational Computing also publishes comprehensive surveys that are packed with the kind of information you need to know. In the past we have looked at systems costing less than £600, Educational software, courses and training

If you are a teacher, the nature of your job and the responsibilities that go with it demand that you keep yourself informed of current affairs — and little is going to affect you, your colleagues and your students in this respect as much as computers

I enclose a cheque for £6.50 (U.K.); Europe £12; non-Europe £14. Ten issues a year Cheques should be made payable to Educational Computing

NOW POST PLEASE TO. *Educational Computing*, 8 Herbal Hill, London EC1 5JB

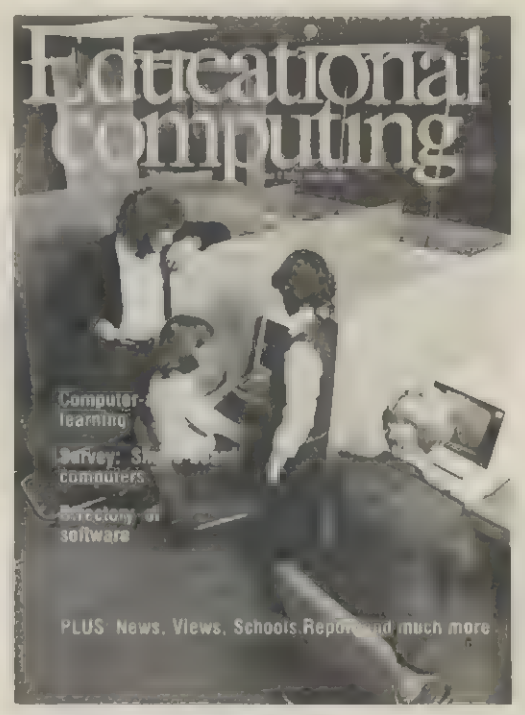
If you are a responsible parent you will want to know what your children are being taught in schools about the new technology. Many parents are diligent members of their local PTA. From January we shall carry a regular feature looking at the many ways PTAs have helped schools raise money for computers, peripherals and software.

The best way of keeping yourself directly informed is to subscribe to Educational Computing.

**Stop Press**

Special notice Special notice Special notice
From the January issue onwards Educational Computing will publish the official newsletter of MEP (Micro electronics in Education Project) all the latest details of their activities will be available So make sure you take out your subscription now

Simply fill out the form.



**Educational Computing**
the magazine looking to the future

# 'ROUND THE HORN RUNS ON THE TRS-80 LEVEL II 16K. BY GEORGE BLANK

The Horn, where our world's two mightiest oceans rage against one-another, long ago wrote its own stormy passages into seafaring lore.

Its unpredictable racing currents, heaving swell and treacherous rocks and reefs, have littered the bleak coastline at the foot of South America with many wrecks.

But in the mid 19th Century the rich pickings to be made by North American clippers made captains risk their vessels and sailors, their lives, once again in the race to be fastest 'Round the Horn.

George Blank has recreated the golden age of the clippers and their most hazardous route in this computerised test of seamanship — a race between three ships from New York to California.

The discovery of gold at Sutter's Mill in 1849 triggered a hurried migration to California that lasted for several years. While few prospectors struck it rich, many shippers did by shipping men and supplies to California.

The highest freight and passenger rates went to the fastest ships, and three of the fastest were the Surprise, the Flying Cloud and the Challenge.

The Surprise was owned by A. A. Low and Brother, and her captain was Phillip Dumaresq. This clipper, displacing 1261 tons, sailed in December of 1849 on a record breaking run to San Francisco of 96 days, 15 hours.

The high demand for fast shipping, not only in the California trade but in the trans-Atlantic trade to Liverpool and the China tea and spice trade as well, led to the golden age of the clipper ship. Two of the greatest were launched within weeks of each other in 1851, and raced to California amidst great publicity. They were the Flying Cloud and the Challenge.

The Flying Cloud, owned by Grinnel, Minturn and Company, was captained by Josiah Cressy. This ship of 1782 tons left on June 2, 1851 and set a new record for the California trade of 89 days and 21 hours. This record stood for several years, partly due to stormy weather that moved the ship to record breaking speeds of over 300 miles a day several times. (The ship did suffer damage to her masts and rigging.)

The Challenge sailed a few weeks later and ran into very calm weather, leading to a disappointing but still impressive time of 108 days. Captained by Bob "Bully" Waterman, the Challenge was the largest ship of her day at 2006 tons and was owned by N. L. & G. Griswold.

This computer program tampers with history a little to allow the three ships to sail from New York on the same day on a race to San Francisco. You will captain one of the ships and attempt to find favourable winds and currents that will allow you to get to San Francisco first. It is by no means certain you will arrive in San Francisco. The passage around Cape Horn is dangerous, and many vessels were wrecked there. If you try to sail through the doldrums at an angle and have bad luck, you could spend months right there.

The computer will display a map of North and South America, with New England indicated by the letter N and San Francisco by the letter S. Your position will be indicated by an exclamation mark, and that of the other vessels by the first letter of their name, assuming that they are not in the same square.

To win, all you have to do is sail your ship into the square containing the S in the fewest days. As soon as

## NOTICE TO MARINERS

**1) Observe special caution in Long Island Sound, Eastern U.S. coast at 40 degrees north latitude. Onshore current is treacherous, especially when combined with southerly winds.**

**2) The Cape Horn Passage is extremely dangerous. For safe passage, remain south of 55 degrees, 30 minutes until longitude 72 degrees west and south of 46 degrees latitude until longitude 84 degrees west. Dangerous polar ice is virtually certain south of 64 degrees south latitude.**

**3) The Caribbean Sea contains many unmarked reefs and is especially hazardous without local knowledge.**

**4) Vessels are advised to maintain good distance from the northeast coast of South America. Light winds and flat calms, combined with unfavourable currents, make long delays likely.**

**5) Vessels bound for California are advised to set course well west of the southern coast of Mexico. Light winds make delays likely.**

**6) Beware of all capes. Reefs often project out from them and make sudden shipwreck likely. (Computer only checks for land due north, east, south, and west. If you approach a cape from the northeast, for example, you will run aground before any land is displayed.)**

## OCEAN CURRENTS

| NAME | NORTH-SOUTH | WEST-EAST |
|---|---|---|
| Japan current | 48N-32N | 132W |
| Japan current | 32N-19.2N | 129W-114W |

| N Equ. current | West | 1.2 |
| Guinea current | East | 1.3 |
| S Equ. current | West | 2.1 |
| Humbolt current | North | 1.8 |
| Brazil current | South | 1.5 |
| Benguela current | North | 2 |
| West wind drift | West | 2.2 |

## CLIMATIC REGIONS

| NAME | SOUTHERN LIMIT | TYPICAL WINDS |
|---|---|---|
| Horse Latitudes | 32N | Strong and variable |
| Northeast Trades | 8N | Moderate from Northeast |
| Doldrums | 3S | Calm and variables |
| Southeast Trades | 28S | Moderate from Southeast |
| Roaring Forties | 64S | Strong and Westerly |

you enter any point in that square, the computer will print an arrival notice.

You will begin each turn by indicating the course you wish to sail. While the computer asks for a number, it will also respond to "N", "E", "S", and "W" for North, East South, and West.

Once you have entered a course, the computer will display your ship, the ocean, any land in sight from the bow, and your fore topmast staysail. The size and position of your sail will indicate the tack you are on. The wind comes across the side of your ship opposite the sail. The three sizes of sail indicate that you are close hauled, (sailing into the wind) on a reach, (wind coming from the side) or running, (wind at your back). The larger the sail, the faster you are going.

Ships cannot sail directly into the wind, and yours is no exception. In fact, it will not sail closer than 45° to the direction from which the wind is coming. The computer will automatically change your course if the wind shifts against you, and change it back when the wind changes back. Should you wish to make a course correction, you may press "Z" for a 22.5° turn to starboard (right for you landlubbers) or "/" for a turn to port. You will find it especially helpful to keep one finger on the "Z" and one on the "/" when you are making the passage around Cape Horn.

In the centre of the screen, directly above the waves, the computer will display any land that is in sight. Don't count on seeing land before you run aground! Sometimes you will see it in time and sometimes not. It is safer (but sometimes slower) to stay away from the coast completely.

There are some navigational aids provided by the computer. You have a compass in the centre of the ship, and a nameplate under it. When the computer accepts a course change, it will display "PORT" or "STARB'D" where the nameplate is.

At the bottom left is information on the direction the wind is coming from and the windspeed. The bottom right displays the ship's calendar and your last navigation position. Expert players will want to depend on this latitude and longitude display extensively, for the map and land displays give only a rough indication. As a help to players, I have enclosed a table of ocean currents, a table of climatic regions, and some notices to mariners, all of which relate to the latitude and longitude.

Landlubbers may assume that a ship will sail in the direction she is pointed, but "it ain't necessarily so".

Two other factors affect your course: leeway and current. Leeway is the result of the wind blowing you off course in the direction it is blowing. Current carries you in the direction the water is flowing.

Weather is also a factor, but there is a trick to it: the computer only checks the region at the beginning of each turn. So, you can wait just north or south of the Doldrums for a good wind, and possibly get completely across without getting stuck. If you think this is cheating enter this line in your program:

1110 GOSUB 7000:GOSUB 7600

The region will then be checked on each half-day, but the game may take longer.

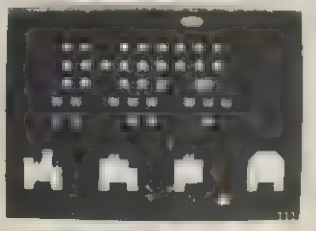
# NEW! For Atom Owners

# THE BIG ONES

**Acorn are right on target with a whole range of games**

**GET THE BEST – FORGET THE REST**

All Acornsoft games are designed and produced by the manufacturers of the Atom. Trust the manufacturer to get the very best out of his product. Realistic sound effects, great graphics and colour too!



**SPACE INVADERS**

This has proved to be the most popular video game ever. And now we've brought it right up to date. Different types of invaders, flying saucers, shelters, laser guns and full sound effects. Program 5K, graphics 6K. Also in Games Pack 5: Wumpus + Reversi

**GAMES PACK 1**

**Asteroids** Shoot them before they crash into you. Lists ten best scores. Program 4K, graphics 6K.

**Sub Hunt** Command a destroyer tracking a submarine, find its position and destroy it. Program 1K, graphics ½K, needs floating point.

**Breakout** Score points knocking bricks from wall. Ball has two changes of angle and speed. Program 3K, graphics 1.2K COLOUR

**GAMES PACK 2**

**Dogfight** Two player game each player controls a plane and tries to shoot down his opponent without crashing. Program 4K, graphics 6K.

**Mastermind** Guess the computer's code before the computer guesses yours, program 3K, graphics ½K.

**Zombie** Land on Zombie island, try to lure all the zombies into the swamp. In desperation jump into hyper space! Program 3K, graphics ½K. COLOUR

**GAMES PACK 3**

**Rat Trap** Move your rats without colliding with the trails left. Entangle your opponent before he entangles you! High speed rat action replay. Program 4K graphics 6K.

**Lunar Lander** Land a spacecraft on a lunar crater, altitude velocity fuel and drift. Program 1K, graphics ½K.

**Black Box** Deduce the position of four invisible objects in the Black Box by firing rays at them. Program 4K, graphics ½K.

**GAMES PACK 4**

**Star Trek** Classic computer game, rid the universe of Klingons. Short and long-range scans, galactic map, phasers, photon torpedoes, shields, etc. Program 5K, graphics 2K.

**Four Row** Take turns in placing marbles on the board, the first to get a line of four wins. Program 5K, graphics 6K. COLOUR

**Space Attack** Repel the invasions of earth and avoid being hit by the gunner ships. Becomes progressively harder with each invasion. Program 3K, graphics 6K.

**GAMES PACK 6**

**Dodgems** Steer your car and avoid the computer controlled car programmed to collide. Survive and the game gets faster. Program 4K, graphics 6K.

**Simon** Test your ability to remember a progressively longer sequence of lights and tones. Adjustable skill level. Program 2K, graphics 3K. COLOUR

**Amoeba** Try and create the shapes devised by the computer. Program 3K, graphics 3K.

**GAMES PACK 7**

**Green Things** An alien life form has invaded your spacecraft, discover a way of destroying it with the weapons available on the ship. Program 5K, graphics 2K. COLOUR

**Ballistics** Take turns in firing shells at the other player, taking into account the wind and shape of the hill. Program 3K, graphics 6K, needs floating point.

**Snake** Grow yourself a snake by guiding it towards digits which it eats. Program 2K, graphics ½K

**ORDER TODAY!**

Just send a cheque or money order only £11.50 per pack including VAT and post and packing. State which packs you want. Or ring 0223 316039 or 01-930 1614 quoting your Access or Barclaycard number. Allow 14 days for delivery.

Or if you think you can wait for more details just write to **Acornsoft Limited, 4a Market Hill, Cambridge.**

## 1K ZX81 MINI SPACE INTRUDERS £5.95

Yes! Our machine language programmers have scored another first! Now you can play this super game on your 1K Sinclair ZX81. All the fun of the arcade game in the comfort of your own home

### HINTS & TIPS for the ZX81 £4.25

*by Andrew Hewson*

- 80 pages explaining clearly how to squeeze a computing quart out of a Sinclair pint pot.
- Saving Space — vital reading for all ZX81 owners
- Understanding the Display File — using the display file as memory, clearing a part of the display, using tokens in PRINT statements
- Converting ZX80 programs — explaining simply but comprehensively how to convert the hundreds of published ZX80 programs
- Chaining Programs — revealing techniques for passing data between programs, calling subroutines from cassette and establishing data files
- Machine Code Programs — all you want to know about Z80 machine language. Explaining how to write, load, edit and save machine code and how to debug your routines

Routines and programs are scattered liberally throughout the text and the final chapter consists of twelve useful, interesting and entertaining programs such as LINE RENUMBER, BOUNCER, SHOOT, STATISTICS etc

Cassettes for 16K ZX81

SPACE INTRUDERS — fight the marauding alien as you battle to save the Earth. All the dynamic parts of this program are written in machine code for super fast fun ..... £6.50

PROGRAMMERS TOOL KIT — line renumber including GOSUBs and GOTOs. Hexadecimal Loader/Printer, Find, Edit and Replace BASIC program strings £8.50

Cassettes for 1K ZX81

STATISTICS — Mean, standard deviation, regression, trend analysis, chi squared test, graph plot ..... £3.75

PLANET LANDER + space docking, clock, stopwatch ..... £3.75

780 Op Codes — this handy ready reckoner lists all 600 plus, Z80 machine codes in decimal and hexadecimal with their mnemonics. Each code is succintly explained and cross referenced. Complete with protective transparent wallet ..... £2.00

**BLANK C12 CASSETTES 5 for £2.75, 25 for £13.25**

## ZX81 ZX80

26 Spiers Close, Knowle, Solihull, West Midlands, B93 9ES England

**1K Space Invaders**

A superb version of the famous arcade game in fast interactive graphs. A 4 x 2 array of aliens descend moving right & left and they can detect your Laser Base so keep it on the move. Previous and current game On screen scoring. Destructable protective shields and keyboard control of the Laser Base & Laser Bolt firing using ◇ & ◇ and the 'Rubout' key.

**1K Breakout**

An interactive graphs 9 ball game, as Invaders written in m/c for good graphs. Try your skill and patience at knocking all bricks from the wall. Use ◇ & ◇ to control the paddle

**1K Music**

From a range of 8 notes you can use your ZX as a toy piano. Your selected notes are written to cassette – continous prompt for new selection of notes – play back your cassette and just listen to it sing. Example tunes

*Please specify 4k ROM or 8k ROM m/c when ordering.*

**Introductory Offer for 1K ZX machines**

**3 cassettes & program listings for ONLY £6-95 !!**

*Lots more software for all ZX machines from 1K 16K. Send S.A.E. for catalogue*

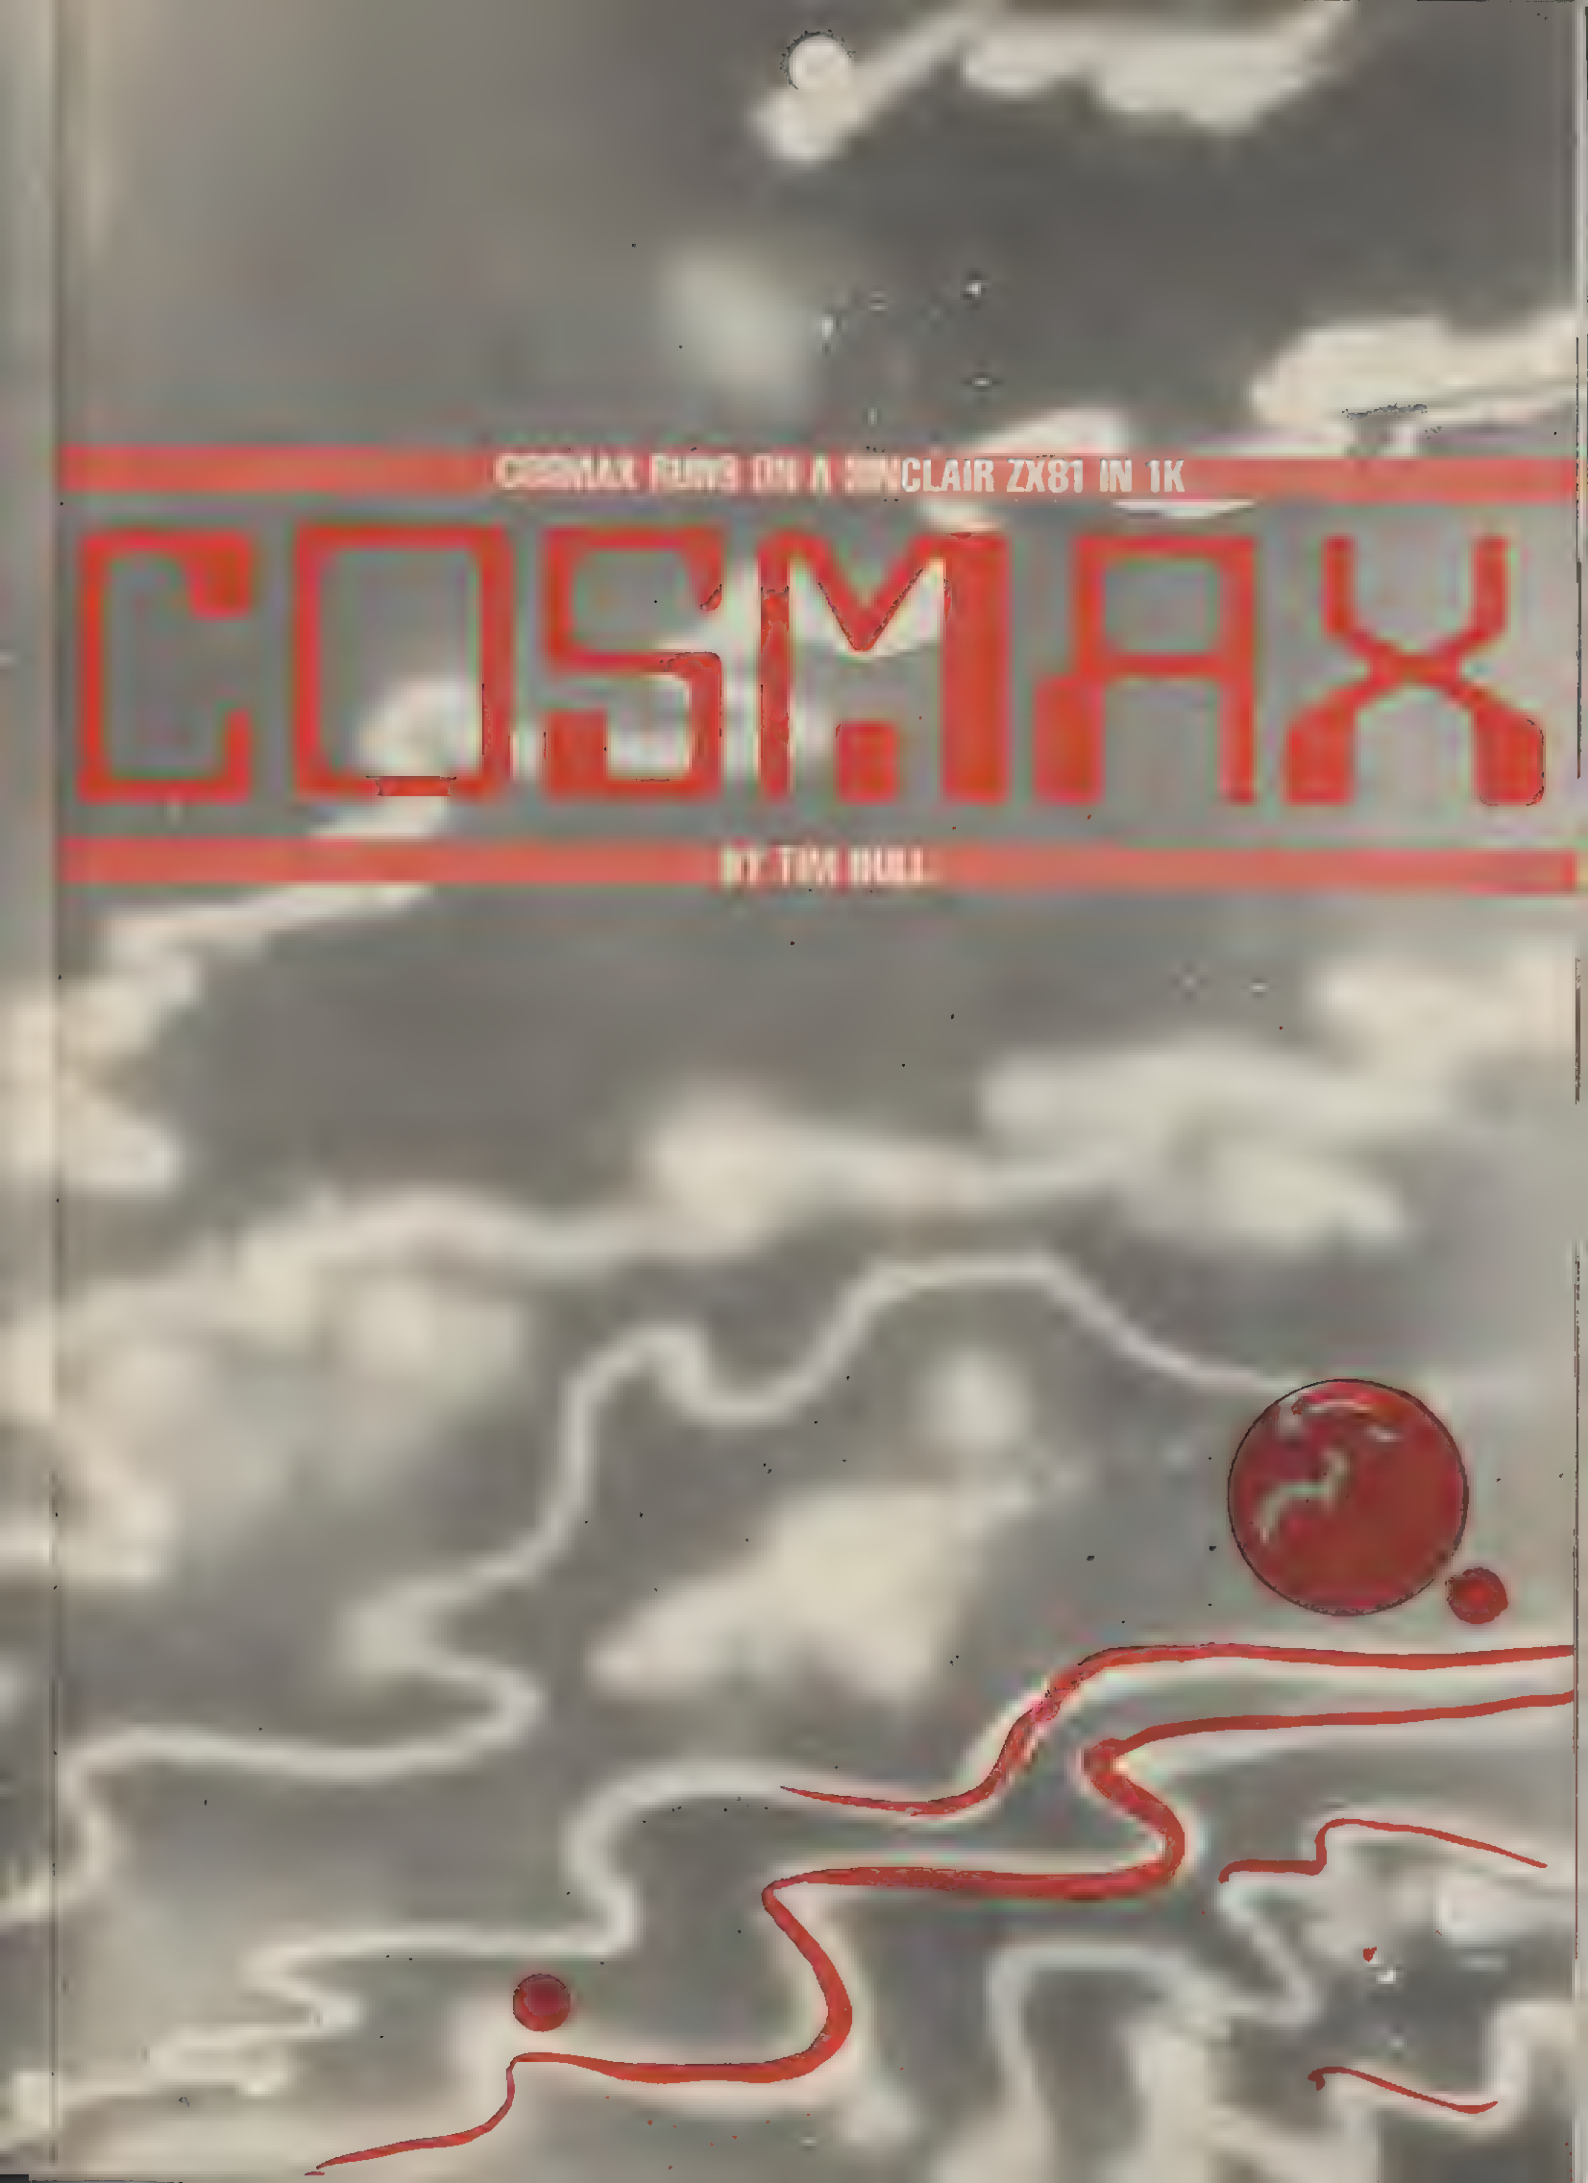
COSMAX RUNS ON A SINCLAIR ZX81 IN 1K

# COSMAX

BY TIM HALL



PET

THIS CUBE SOLVING PROGRAM RUNS IN 16K ON A 40 COLUMN PET

BY PETER AND MATTHEW RICHARDS

# SOLVE THE CUBE!

Cubism is more popular today than Picasso would ever have thought possible.

But if watching 10-year-olds solve Mr. Rubik's little box of tricks on the T.V. screen in ever decreasing times, is getting you down, then go one better and tell people you got your Pet to solve it.

This program enables anyone to solve the cube by giving them a precise list of rotations to carry out. Rather than calling for information at various stages during the solution, the program issues a complete solution from the initial data. The computer holds the state of the entire cube as it manipulates it internally until it reaches the final solution. The would-be solver has only to enter the original pattern of colours on each face of the cube.

The solution is printed on the screen and the solver can manipulate the cube directly from this information. If required he can also have the list or rotations output to a standard printer by simply replying "yes" to the question "WILL YOU WANT THE SOLUTION TO BE OUTPUT TO A PRINTER?".

The program holds the state of the cube, after every move is made, in "percent" (integer) variables, namely E% and C%. This saves memory, since one element of a subscripted "percent" variable takes up only 2 bytes, but this is sufficient as only integers are involved.

The program itself takes up about 8K of RAM, but the variables bring the total of memory needed to about 11K. It was designed for Pets with Basic 2 or 3 but will also work on a Basic 4 machine with 40 columns.

The part of the program before line 1000 prints the instructions and sets up the subscripted variables. The part from 1000 to 4900 works out, in stages, what rotations are necessary to solve the cube.

As each stage is completed the instructions are put into a string, M$, and the program jumps to a subroutine at 5000 which prints out these instructions and rearranges the cube in the memory in preparation for the next stage. It then returns to the main part of the program and continues this procedure until it "sees" that the cube is finally complete and prints FINIS.

The program is written with the rotation instructions based on the suffixes "—1" and "2", but when it comes to printing out the instructions a notation based on lower case letters is used, as this is a more convenient notation for the solver to follow. The solution usually runs to about 100 rotations and a specimen printout is shown.

**Available from Good Computer Stores and Technical Bookshops**

## SARGON II *(Spracklens)*

The first great computer chess program! "We are impressed with the program's speed, its opening book, and its much improved end game . . . Save your money and buy SARGON II . . ." *'80 Software Critique*
Seven levels of play, and levels 0-3 play in tournament time. It has a randomized opening book for all seven levels of play through three moves. When setting up the board, the user can scan up and down, left and right. A special hint mode included at all levels of play but 0 will suggest a good, but not necessarily the best, next move you can make

| | | |
|---|---|---|
| 400034042 | APPLE II | £23.30 |
| 400034093 | APPLE II Disk | £27.20 |

|---|---|---|
| 400070049 | APPLE II Tape | £23 30 |
| 40007009X | APPLE II Disk | £27 20 |

## STARCLASH *(Walton)*

The mission in STARCLASH is to achieve victory by destroying the opposing empire, it is easy to learn, yet constantly challenging and fun
STARCLASH is unlike most other space games, in that it does not involve firing ray guns at passing ships, dropping atom bombs, etc It is truly a strategic battle game played in outer space. Speed is not a factor here A player may take as much time as he or she wishes to make a move, much like computer chess. In addition, the computer plays several different strategies, so that you never play the same game twice

| | | |
|---|---|---|
| 400059037 | TRS 80 Level II | £13.20 |

## MIND THRUST *(Sackson and Wazaney)*

The first of its kind — an exciting game that lets you match wits with the computer! The object is to complete an unbroken chain across the board before your opponent, the computer. There's a special feature; you may switch sides whenever you wish and gain control over your opponent's pieces, but this means that the computer has control over your chain, as well. Every game is different.

| | | |
|---|---|---|
| 400074036 | TRS 80 II Tape | £12.50 |

# Kit Korner

## TROUBLE SHOOTING ZX81

THIS year Sinclair has flooded the home computer market with the ZX81, giving almost everyone the chance to break into this fascinating field. Despite the low cost of a ready-built ZX81, the saving offered on the kit has tempted many with no constructional experience whatsoever, to chance their luck.

Unfortunately a simple fault or problem can be very off-putting for the beginner, so I am going to give you a few points to look out for before and after construction. Many of these have come up on the ZX81 but most apply to all kits.

To begin with, the ZX81 has been designed to fit into as small a case as possible. Consequently the board layout is a little more muddled than some I have come across and requires careful checking.

If you bought a kit before June of this year the first thing to look out for is an incorrect component listing. An errata was supposed to have been included but many kits went out without one. The circuit diagram if you can follow it shows that R3 and R6 must be swapped over, i.e. R3 — not used and R6 — 2K2. Also R15 should read 220K but this is not crucial and works well with the 1K0 resistor suggested on the components list.

If there is a circuit diagram as well as a component list with any kit, check one against the other and if there is a discrepancy find out which is correct before proceeding. It will save you time and trouble in the long run.

As I mentioned before, always take care when soldering in components, especially transistors, to prevent overheating. Two transistors are supplied with the ZX81, TR1 and TR2. Both are ZTX313's, which are very small physically, and proved a real problem to even the skilled kit builders. The effects of overheated transistors are distorted characters or no picture at all. For those who think they may have damaged their's the direct equivalent to the ZTX313 is the 2N2369.

Take care this time to mount the transistors at least a quarter-of-an-inch above the board and solder lightly. Also make sure that you have put the transistor in the right way round as the pin layout may be different.

Another problem I found, even with ready-built versions, was the keyboard connector. Initially the connectors are very stiff but after a few insertions it becomes easier, although you must still take care not to crease the keyboard tails. If the ZX81 will not accept inputs from the keyboard check this point first, even if yours is ready-built. It may have been shaken loose in transport.

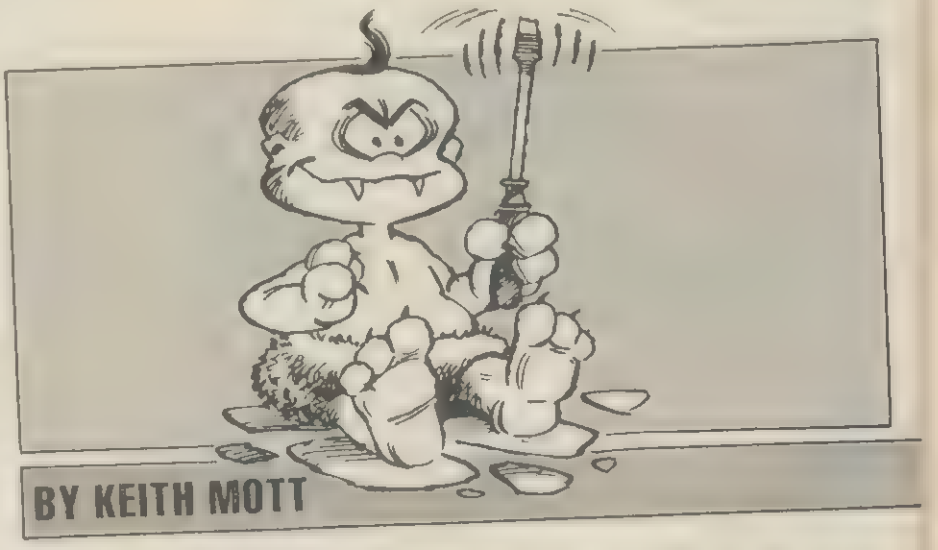
One trick I had to learn was to cut the tails, having fractured one of the tracks through creasing, and carefully scrape away the insulation on the right side to make contact again. This is a last resort as a creased tail is not a serious problem unless you intend to take the ZX81 apart often. However, send the ZX81 back for a replacement if the fault is in the keyboard itself.

When specifying the kit version you are given the option of buying the power supply which is recommended. If, however, you decide to use your own, be warned that if it gives more than 12 volts, which is permitted by the regulator but not by Sinclair, the regulator will overheat and may even cut out after a time. This will not harm the circuit for as soon as the regulator has cooled down it will return to operation, but it is annoying if you have just entered in a long program.

To cure this I cut out a larger heat sink from a piece of 12 gauge aluminium sheeting, which sits all the way across the front of the board, as I sometimes use a power supply of 14.5 volts, i.e. a spare car battery. Of course you must never run a computer off a battery in a running car!

There is one precaution you should take to prevent "blowing up" chips. This can occur when a static charge accumulates on one or more of the pins of the chip. To prevent this, touch something earthed, like a water tap or some large item of electrical equipment, such as a washing machine or cooker, before going to work. Also touch the chips as little as possible. Dirty pins are as difficult as open circuits to trace.

Fortunately the ZX81 comes with a circuit and layout diagram as well as a corrected component list. The board, even in its muddled design, has a helpful layout printed on it, as so many do these days, with the component number nearby. Build it correctly and carefully as instructed, as you will be very lucky to find the faults afterwards!



BY KEITH MOTT

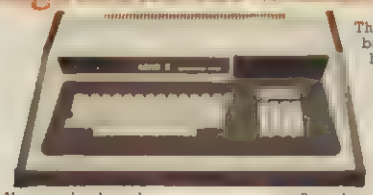
# ingenious!

that's the only word to really describe the superb Genie microcomputer system, the home computer which is compatible with the TRS 80, and ideal for all micro - enthusiasts, especially the committed hobbyist
Genie has now been upgraded to Genie I, incorporating all of the original excellent features but with the addition of

- Extended BASIC, including RENUMBER and SCREEN PRINT
- Full upper and lower case, flashing cursor and auto-repeat on all keys
- An internal SOUND UNIT to add a new dimension to your own programs
- A MACHINE LANGUAGE MONITOR, with Display, modify, enter and execute (with break points) facilities

Genie I has all of this, plus the built-in cassette deck 16K RAM 12k ROM with BASIC interpreter, full-size keyboard , an extremely wide range of new and up-dated peripherals, and literally 1000's of pre-recorded programmes available
Yet, almost unbelievably, the price of Genie I is even lower than that of the original Genie

## Ingenious for business



The Genie II is a major breakthrough for small business computers
Harnessing all the advantages of Genie I, including low price, Genie II adapts perfectly to commercial functions with the following features

- Numeric keyboard
- Four usable definable function keys
- Extension to BASIC
- Basic business commands
- Fully expandable with the same peripherals

## New!...12" Monitor

Now, a choice of 2 monitors giving a clear easy to read image The updated EG101 has a new green phospher tube

## New!...Expander

An updated Expansion Box (EG 3014) is a major feature of the new Genie I system, and unleashes all its possibilities, allowing for up to 4 disk drives with optional double density. It connects to a printer, or RS232 interface or S100 cards. There is 16k RAM fitted and it has a new low price!

## New!...Printer

The EG 602 printer can be connected to the Genie either through the expander or directly into the computer using the Parallel Printer Interface. It is a compact unit, with an 80 column, 5 x 7 matrix print-out, operating quietly and efficiently at 30 characters per second

## Disk Drive

As well as the obvious advantage of mass storage, the addition of the disk system to the Genie means much faster access to other languages and full random access file handling. Up to 4 of these 40 track drives can be used on a system

**SPECIAL TECHNICAL GENIE HOT – LINE ON 0629 4995**

for all your technical advice and service back-up on any aspect of the Genie system direct from the experts!

For full details and demonstration of Genie I, Genie II or advice on any aspect of the system, either call in to your local dealer, or write directly to the sole importers at the address below

# CHRISTMAS

## COUNTDOWN TO PANIC

If you panic in stress situations, the bomb defusing game, Le Boom, will either kill or cure you.

Discover whether you are clear-headed and steely-nerved enough to compete with the army's bomb disposal unit. It is your job to defuse a rocket shaped bomb from electronic clues before the thing goes off.

A choice of four different skill levels, generate the game's electronic sounds, which form the clues to preventing the big bang. You must also choose the length of fuse wire — the longer the wire, the more time you have to find the correct sequence to stop the bomb from exploding.

Le Boom is built to last and it's durable plastic moulding will withstand most violent bangs. If you fail to defuse the thing don't worry, it won't blow you to kingdom-come — but you do get a series of explosion noises imitating the real thing.

Your sense of panic is prompted by the electronic din getting louder as the bang comes closer. The toy is a welcome addition to the range of electronic toys brought out by Oxfordshire based toy manufacturers Action Games and Toys.

In addition it falls into the low end of the electronic games market with the cheap price tag of £14.49 and runs on four MN1300 batteries (not supplied). A good Christmas bargain from most large stores with toy departments.

## MUSICAL MEMORY TWINS

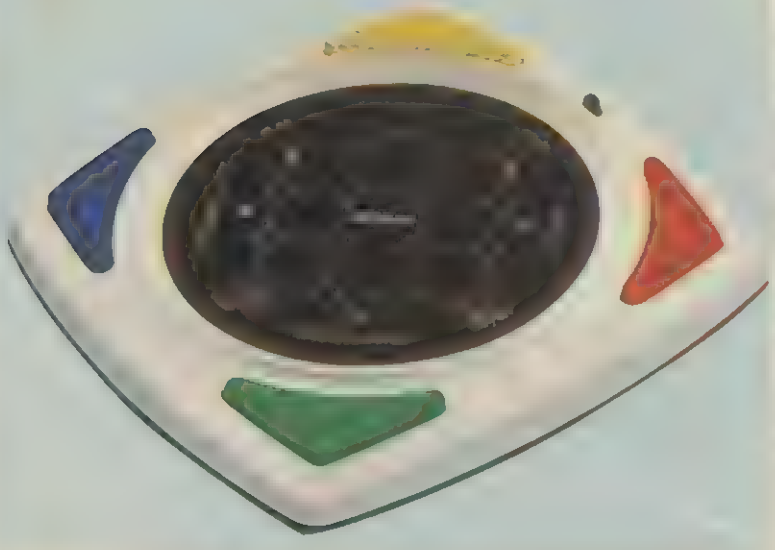
The design teams of Waddingtons and Adam Imports must have got together to produce their respective versions of the musical memory money-spinner, Simon.

Each is made of the same white and blue plastic casing with four coloured, triangular shaped buttons in the corner of the mould. There's also a circular screen on the top of the game with a grid of nine squares marked on it and circles in the squares corners containing red lights.

The only differences in the physical appearance of the game are the name and each firm's own logo. The Adam Import version is called Adam Super 11 (pictured) from the company's Grandstand range of electronic toys while the Waddingtons' one goes by the name Wizard.

Both games are for one to four players, with a minimum age of six, on Wizard, and seven on Adam Super 11! Both run off six HP11 batteries (not supplied).

The biggest difference between the two and the most important, is the price. Wizard clocks in at £24.50 but Adam Super 11 comes into its own at a price of £18.95. In some stores it will cost up to £20.95, depending on the manager's discretion.



## DESTRUCTION FROM THE DEEP

People who prefer shooting down enemy craft under the sea, rather the deepest voids of space, will like a 3-D hand-held game, Torpedo Shoot.

Its neatly shaped body is based on an arcade games machine with a screen at the top. The aim is to destroy the fleet of battleships which sail across the path of a torpedo under your control. Using the two arrow buttons you can manoeuvre the submarine into one of four positions from which to fire at the ships.

This is no ordinary hand-held game though, the screen with its L.C.D. display of red lights is also three dimensional adding depth and reality to the entire game.

Everytime you wipe out a battleship another one comes breezing onto the screen until your time is up. When you manage a direct hit the little machine provides you with accompanying explosion sounds to add to the realism and the target sinks.

Torpedo Shoot is aimed at the over eights and runs off one nine volt battery (not included in the package). It costs £9.83 from Leicestershire-based distributors AA Hales.

## GRAND PRIX ON A "SPACESHIP"

If racing cars are more up your street than space vehicles then try one of the electronic versions around.

In this replica of the arcade game you have got two options to go for. Either the player can try a circuit race completing a certain number of laps, or he can race against the clock.

The car is controlled by two small joysticks which alters the car's speed by accelerating and braking, as well as steering the car.

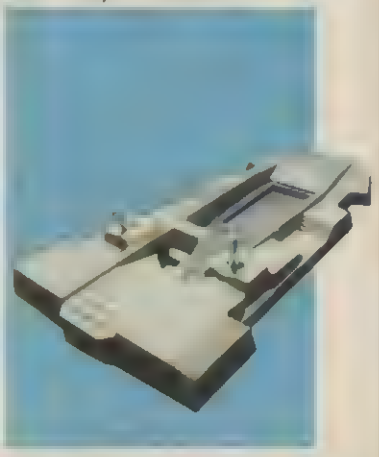
Other cars on the race track are controlled by the microprocessor. The track itself is displayed on an L.C.D. screen divided into three lanes. But the actual body of the game looks more like a space ship than anything remotely to do with formula one racing.

When you opt for the circuit race the computerised game works out the time taken to complete a fixed distance of 800 kilometres. When you're racing against the clock the idea is to cover as many kilometres as possible in 140 seconds.

Points are scored for timings, the number of crashes with other cars, and the whole game comes complete with sound effects of car engines and thunderous crash noises.

A record of your achievements and lap times, number of crashes are kept by the microprocessor at the heart of the game.

It costs £27.95 and is available from Computer Games.



## A BIG MATCH AT YOUR FINGERTIPS

Two electronic football games came onto the scene this season, updating the popular pub game of mechanically operated table football.

The first, called Match of the Day, has been given the seal of approval by England football captain Kevin Keegan. The oblong shaped game has a pitch marked out on an L.C.D. screen with the correct lines, goal areas, nets and corners. For one or two players, the game can be played at two levels, aptly named amateur or professional.

Beat the opposition team by controlling your players with four directional buttons and when you judge the right moment press the "shoot" button to whack the ball into the net.

Sound effects include the referee's whistle blowing whenever there's a foul, a penalty or a goal scored. The only sounds the game doesn't recreate are the shouting and singing of the football hordes. Time is kept for each half — just like the real game. Match of the Day retails for £19.95.

Another offshoot of Adam Imports' Match of the Day is the slightly more sophisticated game Grandstand Soccer. Not as attractive to look at but made of similar long-lasting plastic to Match of the Day, the game is along the same lines. For one or two players, two levels and two coloured teams, red and green, as well as diving goalies. The illuminated figures look more realistic than the Match of the Day counterparts and have a flourescent display.

Another feature is that the ball is separate from the players. In Match of the Day, the player in possession of the ball is more brightly lit than the others.

Both games are battery powered (not included with the game) or can be run off the mains. Grandstand is priced at £27.95.

## JET FIGHTER

All your tactical abilities are needed in the "search and destroy" game with a jetfighter pilot theme.

Intercept is played on an electronic board with pieces to move into position and buttons for firing on the enemy.

You are provided with an interceptor plane and S.A.M. (Sea to Air Missiles) sites and tracking indicators which are placed on the plastic grid surface.

Players can either choose to be the attacker or defence commander. Find out where your enemy is concealed by using the clues of coloured lights indicating enemy rockets and missiles launched to destroy your own forces.

Track down an enemy craft using the fire button to wipe it out and hear the rewarding sound of a direct hit and a riot of flashing lights.

From the Action Games and Toys stable this game is reminiscent of Battleships and retails at £14.49 from the firm's distributors.

Also in the Action Games and Toys catalogue is the memory and dexterity game of Computer Perfection.

The players have to match up the symbols shown on the dome shaped display, by remembering the sequence of the symbols first played by the computer's brain. This latest version of the game is an advancement on the non-electronic baby brother Perfection where you race against the clock to fit the correct shaped pieces into their home slots. Not only is it fun to play and a test of your memory but you also get a good light and sound show.

It runs off two 9 volt batteries (not supplied) and costs £17.39.

## MAKING TRAKS

A good toy for children who have heard about microprocessors, is Big Trak, a programmable model lorry.

It came into the UK shops last year amid a splash of publicity because of its programmable capacity. You can enter in up to 16 different commands simply by pressing calculator type keys. The truck will go forwards, backwards, turn at any angle and complete a whole circle.

Another special feature is that it can fire single or rapid shots from its laser cannon. It looks a bit like a moon buggy with big tank tracks on the wheels and is made of heavy duty plastic so it will withstand any unsuspected crashes into furniture if the programmer miscalculates his instructions.

Big Trak can be made to negotiate courses that you set by estimating distances for the toy to cover by multiplying the lengths of Big Trak — it measures 14". It's a test of skill and accuracy on the programmer's part to get Big Trak safely round a course.

A transporter is also available at extra cost to tack onto the end of Big Trak. Not only is Big Trak fun to play with it is also believed to be educationally good for children in learning how to program and amend the program after seeing the result, without the child realising what he is doing.

Made by Milton Bradley, Big Trak costs between £27 and £35 but make sure your furniture is as robust as the toy before you buy one.

## WESTERN LORE IN YOUR HANDS

Find yourself being drawn back to the lawless days of the wild west this Christmas with Gunfighter.

The game relives the legend of the shoot-out between Jesse James and Cole Younger, on a liquid crystal display screen, in the hand-held format.

Two figures fight it out in the apt setting of sandy western scrubland.

Obstacles appear on the screen to add to the difficulty — like tumbleweed wafting between the two gunmen. If any of these are hit points are deducted from the score.

The toy is made of robust plastic so it should survive if it is hurled to the floor through frustration at not winning.

The game is one of the more expensive hand-held type at £27.95 and is distributed over here by Computer Games. It runs on two HP11 batteries (not supplied)

# BY DAVID ANNAL

DOES your computer squeak when you want it to roar? Several of the "second generation" microcomputers have sound circuits built in but their output power is small and the loudspeaker often minute, one example being the Apple.

Such a loudspeaker is not capable of anything but a small squeak and will certainly not do justice to a music program or speech output.

Other computers, such as the Pet, are not equipped with any on-board amplifier or speaker at all-although the circuit to generate sounds is there and pin-outs are provided (80 column Pets do have a small "bleep").

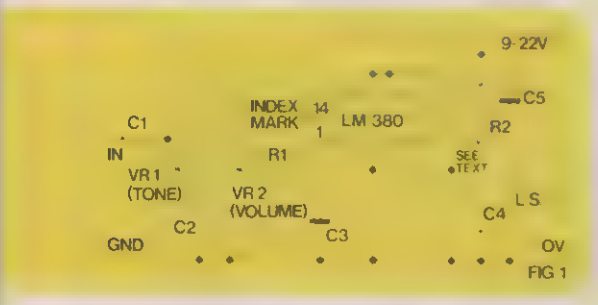


FIG 1

In the case of these quieter type of computers, a sound box is necessary and it can be used to advantage in the second generation type to increase volume and fidelity. It is always possible to connect the computer to your hi-fi auxiliary inputs and thereby obtain amplified sound.

However, it is inconvenient to trapse around to the club or your friend's house with the music-centre in tow! For these reasons I am giving details of a small, cheap, but quite powerful, general purpose amplifier which is easy to construct and which should prove very useful in many ways.

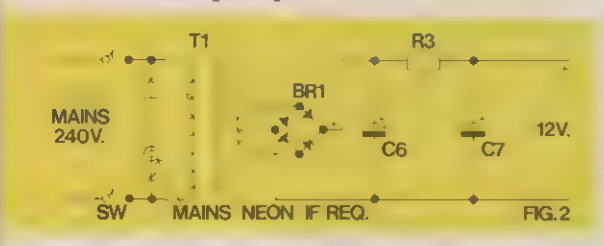

FIG.2

The circuit is shown in diagram 1. It centres around a small 14 pin integrated circuit chip, the LM380. For those of you not familiar with the DIL package, we show the chip as it actually looks when viewed from above.

This chip houses all the amplifier circuit except for the few additional components shown. C1 is an isolating capacitor. C2 and VR1 form a top-cut tone control and may be omitted if desired. VR2 is the volume control. R2 and C4 supress any tendency for the circuit to oscillate at high, inaudible frequencies and thus lose power. They are not essential and the circuit should work without them. If the amplifier is supplied by a power pack running anything else, then decouple it with a 100 $\mu$F electrolytic capacitor from pin 14 to ground.

The circuit will work on voltages from 9V to 22V and, depending on this, will give 2-5 watts output. The speaker should be of reasonable size e.g. an eliptical of 6×3". It can be 4-8 ohms impedance (even a large PA type can be tried — you'll be surprised!).

For portability and ease of operation, power can be provided by a battery of PP9 type. Alternatively, a small separate mains power pack could be constructed. This needs to be rated 100mA and a circuit for one is shown in figure 2. If the sound box is to be permanently housed inside the computer case, there may be some power available to run it from the computer power pack — see your manual but take care!

Construction is straightforward. Use 0.1" Veroboard or, if soldering is not a strong point, make it up first on a small breadboard. Make sure the electrolytic caps are the right way round. Use a 14 pin socket for the integrated circuit. The latter is quite sturdy and will stand short circuits. It also incorporates a temperature overload and will cut out if it sets too hot. For this reason, if more power is needed a heatsink can be clipped to the integrated circuit.

If a box is purchased big enough for the loadspeaker, all the rest, including the power supply, should fit inside. If using a battery, it is a good idea to incorporate a L.E.D. indicator to show when the amp is on. The current used when nothing is being output is quite low but does slowly run the battery down.

The indicator should be a flashing type e.g. using a LM3909 so as not to use up all the battery power itself by staying on all the time!

Connecting to the computer should not be difficult. In the case of a 40 column Pet for example simply join the input wire to pin M of user port and the ground to pin N. The circuit will also give increased output from your audio cassette player and can be used to monitor the cassette functions on the computer — consult your manual.

All the components are standard and should be easily obtainable from component shops or by post. The total cost of the whole sound box including speaker and mains power pack should be no more than £8, excluding case.

**Component list**

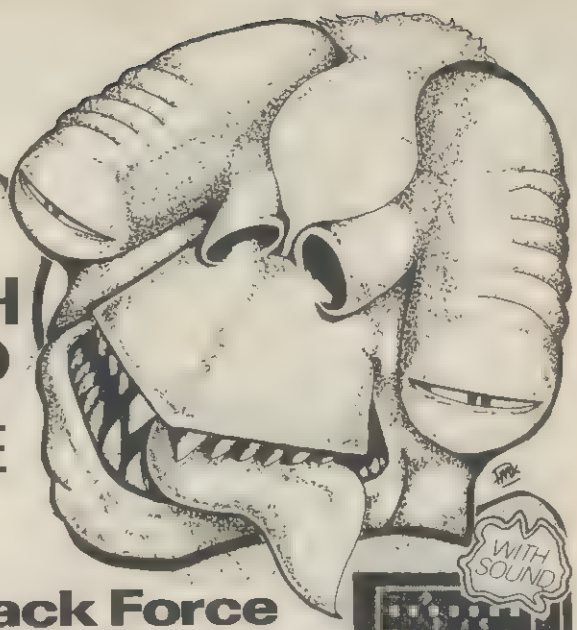
C1 0.15$\mu$F 100V Polyester.
C2 0.047$\mu$f any type.
C3 1$\mu$F min. electrolytic.
C4 0.1$\mu$f any type.
C5 470$\mu$F 25V electrolytic.
C6 1000$\mu$F 25V electrolytic.
C7 2000$\mu$F 25V electrolytic.
VR1 10K Lin. potentiometer.
VR2 250K log. potentiometer.

**Also required — small piece. 1" veroboard, 14 pin DIL holder & suitable case.**

R1 680K $\frac{1}{8}$ watt.
R2 2.7ohms $\frac{1}{8}$ watt.
R3 47ohms 1 watt.
BR1 50V 1A min. bridge rectifier.
T1 12V 100mA mains transformer.
IC1 LM380.
SW 2-pole mains on/off.
LS 8ohm loudspeaker.
Mains neon if required.

# The Essential Software Company

# THIS IS NOT A PRACTICE DRILL! EARTH IS BEING INVADED ON YOUR TRS80 & VIDEO GENIE



## Galaxy Invasion

The newest and most exciting invaders type game yet! Cruel and crafty aliens attack Earth. You are the sole defender. As you fire your laser at the aliens they swoop down and bomb you. Exciting use of graphics! Must be seen.

**TRS 80 Level I & II 16K Tape**
**Video Genie 16K Tape**

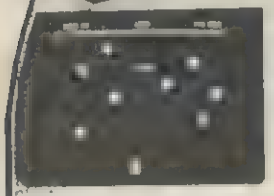
## Attack Force

Dodge the alien Ramships and fire missiles to destroy them before they get you The alien Flagship uses his deadly laser bolt to transform a Ramship into another Flagship or into your ship's double. Look out! Destroy your double and you could destroy yourself.

**TRS 80 Level I & II 16K Tape**
**Video Genie EG3003 16K Tape**

## SuperNOVA

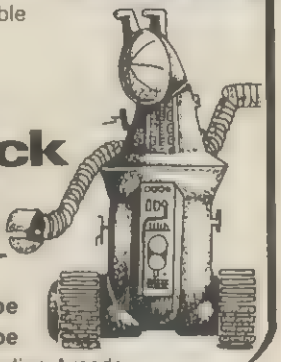
ORDER NOW



Now the amazing ASTEROIDS arcade game for your TRS 80! Your ship is floating in the middle of an asteroid belt! Your only escape is to destroy them and the crafty alien spacecraft! Blast them with your laser, thrust, rotate or hit hyperspace to survive!

**TRS 80 Levels I & II 16K Tape**
**Video Genie 16K Tape**

## Robot Attack



THE GAME THAT TALKS

**TRS 80 Levels I & II 16 K Tape**
**Video Genie 16 K Tape**

The Newest and Most Astounding Arcade Game that TALKS has just Reached Planet Earth You can't help yourself You have to stop them at all cost. Don't let up. Written especially for high quality graphics you'll simply be dazed and excited by the action

## Cosmic Fighter

Your fighter appears below a convoy of Aliens! If you destroy them another set appears who seem to be slightly cleverer than before! Soon your space station nears but before you can dock the station comes under attack! Survival is up to you! The excitement is just beginning!!

**TRS 80 Levels I & II 16K Tape**
**Video Genie 16K Tape**

## Gobble MAN

Watch out behind you! As you hurry through the maze collecting your energy modules you score points. But don't let the Gobblemen catch you. If you are crafty, sneek up behind them and neutralise them to gain extra points. Just keep a watch. When they attack you they come in fast. Just don't lose your nerve.

**TRS 80 Levels I & II 16 K Tape**
**Video Genie 16 K Tape**

## 3D Adventures

for TRS 80 LEVEL II 16K

3-D means that as you wander through the mazes and buildings, full screen graphic display constantly shows your position in a perspective format as though you were actually there! This "rat's eye" view adds an entirely new dimension to adventure.

English language commands can be entered at any time to manipulate your environment. The command sets are extensive and sophisticated. Dozens of objects are scattered throughout the mazes and buildings. You can pick them up, burn them, throw them, etc. You may need the sword to fight off an ugly little man. Or a steel rod to hold apart crushing walls. Deathmaze 5000 and Labyrinth allow the traditional one and two word commands. Asylum incorporates our Advanced Language Interpreter (ALI), which allows full sentence input.

Deathmaze and Labyrinth consist of over 550 locations! Asylum tops 1200 locations!

# PROGRAMMING

By TED BALL

## WHEN YOU NEED TO SPEED THINGS UP

It is the computer's calculating speed which has made it such a boon to mankind but a good game can often be ruined because a calculation is carried out too slowly.

In microcomputer games, speed is particularly important in moving graphics, where slow processing will give a jerky effect. In strategy games where the computer must calculate to decide its move, a long wait will result in all-too-human boredom.

One important way of speeding up programs is to use tables which allow the computer to look up already calculated values instead of repeating the calculation every time the result is needed.

In its simplest form a "look-up table" is just an array in which each element is the required value corresponding to its index. For example, if we have a program which uses the square roots of the numbers from 1 to 10 we could use an array R dimensioned to 10 with R(I) equal to the square root of I. Whenever a square root is needed it can be obtained as N=R(I), which is much faster than the calculation N=SQR(I).

As an example of a more complicated look-up table, consider the problem of evaluating hands in five-card draw poker. (You do not need to know the game in order to follow the example, and the method can be applied to other games in which runs and pairs are important.) To avoid making the example too complicated I will ignore flushes and the fact that an ace may be high or low in a straight.

The simplified problem then consists of deciding whether a hand contains high cards only, a pair, two pairs, three of a kind, a full house (three of a kind and a pair), four of a kind, or a straight (five consecutive cards).

It would be possible to write separate routines for testing each possible case but this is likely to be very slow. It is not immediately obvious how we can use a table to solve this problem; the key is to arrange the cards in ascending order and look at the differences between the cards.

A difference of zero means two cards of the same value, a difference of one means two consecutive cards, while a difference greater than one means that the two cards cannot contribute to pairs or a straight.

To make this clearer, let us look at a few hands:

2, 3, 3, 5, 6 differences 1, 0, 2, 1
2, 3, 3, 3, 6 differences 1, 0, 0, 3
2, 2, K, K, K differences 0, 11, 0, 0
4, 5, 6, 7, 8 differences 1, 1, 1, 1

In the first hand we have a pair — a single difference of zero; in the second hand we have three of a kind — two consecutive differences of zero; in the third hand we have a full house — a single non-zero difference; in the fourth hand we have a straight, and four differences of one. The pattern of zeros, ones and numbers greater than one — can be seen to be related to the type of hand.

We can obtain a single number from the four differences by replacing all differences greater than one by two (as the actual value of the difference is irrelevant to this type of hand) and regarding the differences as

the digits of a ternary (a base 3 rather than decimal) number. Thus, the four hands above give:
ternary 1021 = decimal 34
ternary 1002 = decimal 29
ternary 0200 = decimal 18
ternary 1111 = decimal 40

If the five cards in the hand, in ascending order, are in the array C, the following simple routine will calculate the index for the hand:

```
100 LET I = 0
110 FOR N = 2 TO 5
120 LET D = C(I) - C(I-1)
130 IF D>2 THEN LET D = 2
140 LET I = 3*I + D
150 NEXT N
```

The value of I calculated by this routine can be used to access an array of dimension 80 containing code numbers corresponding to the type of hand, and these code numbers can then be used to select routines which further refine the valuation of the hand according to the values of the cards.

## PRINTING WITHOUT BEING DAMNED

The PRINT statement, like almost everything in Basic, is subject to numerous dialect variations. Some of the variations can be seen if we consider how we might arrange to print at different places on the screen without changing anything except where we are actually printing.

The current print position is marked on the screen by a cursor, and the cursor location is stored in memory where the Basic interpreter can find it. It is possible to change the print position by POKE-ing the different values into the cursor location, but most Basics provide other methods.

The most direct method is found on the Sinclair ZX81, with PRINT AT, and on the TRS-80, with PRINT @. These allow the print position to be set immediately to any part on the screen. The POSITION statement on the Atari machines works in a similar fashion, while on the Apple II the TAB and VTAB functions set the horizontal and vertical position separately. The Pet has keys for cursor up, down, left and right, and these commands can be incorporated into PRINT lists.

It is usually necessary, when using cursor control functions, to keep track of the cursor position. Some Basics provide a function POS which returns the current cursor position, but even without the POS function it is quite simple to use variables to record the cursor position.

All these methods of shifting the print position can be simulated by POKE-ing to a memory-mapped screen. If the screen has M rows and N columns, and the memory location corresponding to the top left-hand corner has address S, then the address for row R and column C is easily seen to be S + N*(R-1) + C-1. To print a string X$ starting at R,C we can use the following routine:

```
1000 LET Z = S + N*(R-1) + C-1
1010 FOR W = 1 TO LEN(X$)
1020 POKE Z+W-1, ASC(MID$(X$, W,1))
1030 NEXT W
1040 RETURN
```

The equivalent to PRINT AT X,Y, "MESSAGE"; is

```
100 LET R = X
110 LET C = Y
120 LET M$ = "MESSAGE"
130 GOSUB 1000
```

The routine can easily be modified to print vertically instead of horizontally (this is not provided in most Basics).

```
1000 LET Z = S + N*(R-1) + C-1
1010 FOR W = 1 TO LEN(X$)
1020 POKE Z + (W - 1)*N, ASC(MID$(X$,W,1))
1030 NEXT W
1040 RETURN
```

The above routines do not alter the simulated print position, so that:

```
200 LET M$ = "SECOND MESSAGE"
210 GOSUB 1000
```

would overwrite the first message. To cause a second message to be printed after the first we can add the following lines to the first routine

```
1022 LET C = C+1
1024 IF C>N+1 THEN GOTO 1030
1026 LET C = 1
1028 LET R = R+1
```

With this modification we can simulate cursor up, down, left, right as follows:

Cursor up: LET R = R-1
Cursor down: LET R = R+1
Cursor left: IF C>1 THEN C=C-1 ELSE C=N; R=R-1
Cursor right: IF C<N THEN C=C+1 ELSE C=1: R=R+1

The above routines test for the left and right edges of the screen and adjust the row and column values accordingly; although no tests have been given to ensure that the print position stays on the screen. However, the latter tests are very important and should be included during the development of a program; it is sometimes possible to eliminate such tests in the final version, provided you are sure that nothing can make the print position move outside the screen.

# Graphics

BY GARY MARSHALL

WHEN we can place a shape on a memory-mapped screen by making it up with graphics characters, the next step is to make the shape move round the screen. It is fascinating to make it move in a way that can be controlled by you, the user.

In the better games programs that have been written for the popular microcomputers, a fairly standard arrangement for movement under user control has evolved. It usually involves the use of the numeric keypad, although if a particular micro doesn't possess one, any square block of nine keys can be used.

**Figure 1: Control keys and directions**

The movement control plan is illustrated in Figure 1. The number 5 is central, and is taken to indicate that no movement is required. Since the number 6 is situated to the right of 5, this key is used to indicate that movement to the right is required, and so on with the other keys.

Using the routine given last month to plot a space invader we can write a program to move the invader around the screen. The program should scan the keyboard to see if a control key has been pressed, and if so it should move the invader appropriately.

Thus, if the invader is situated with reference to a screen position, P, and the 6 is pressed, the invader should be moved one place to the right. This can be done by increasing the reference position by one and plotting the invader again.

Movement to the left can be achieved by subtracting one from the reference position. The changes which have to be made to the reference position for all directions of movement are illustrated in Figure 2 for the Pet, which has 40 character positions in a row.

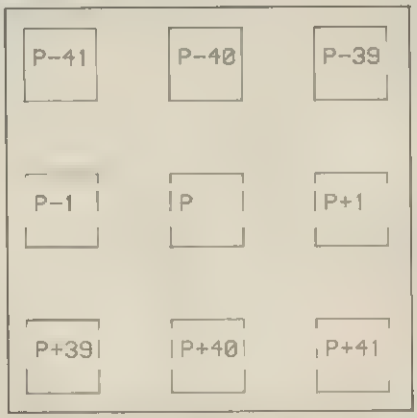

**Figure 2: Screen Locations and directions**

One refinement is needed, because if an invader, or any other shape, is moved like this, it leaves parts of itself behind so that its movement is characterised by a 'bleeding' which marks its course. To avoid this, the shape can include a surround consisting of spaces, so that the part left behind is a space and no trail is left.

A Basic program, written for the Pet, to draw an invader and move it round the screen as directed, is shown below.

The program lines have the following functions: line 10 clears the screen and line 20 sets the reference position for the initial plot of the invader.

Lines 30 to 50 plot the invader with reference to P and lines 60 to 110 put the border of spaces around it. Line 120 scans the keyboard until a key is pressed, while lines 130 and 140 reject all depressed keys except control keys. Control only passes to line 150 if a control key is pressed, and lines 150 to 230 move the reference position in response to the depressed key before returning to re-plot the invader in the new position.

Notice that the invader can be driven off the top or bottom of the screen, which is not to be recommended. In fact, a good refinement to the program would prevent it.

Removing lines 60 to 110 converts the program to a rather pretty pattern drawer. The movement scheme gives some insight into how the pieces in many games can be moved.

# BEWARE THE BOMBING SPACE BIRDS

## ASTROBIRDS AND 3-D ASTEROIDS

The Astrobirds have you in their sights and it is really only a matter of time before you slip beneath their falling bombs.

It is an extremely addictive space attack game in the mode of the Galaxian arcade game. This version is produced by Program Power for the Acorn Atom and has excellent graphics and sound effects.

The tape loaded first time and upon being run produced a good set of instructions and details of point scoring. After pressing the return key the game commences.

The total invasion fleet of 19 Astrobirds shift back and forth across the screen dropping bombs.

The Astrobirds carry out swooping attacks, one by one, on your laser base, which can be hit three times before the game is over. All this is accompanied by the most extraordinary selection of sound effects making full use of the Atom's built-in loud speaker.

When you have successfully cleared the screen the next fleet appears.

As the game goes on the Astrobirds move faster and drop more bombs until you can't cope.

Astrobirds is a most enjoyable game that will give hours of entertainment and just the right amount of frustration. Very good value at £8.95 plus V.A.T., it requires 11 K memory (including 6 K graphics).

Another Program Power tape for the Atom is 3-D Asteroids.

3-D Asteroids is a one-player game in which you manoeuvre your craft through an Asteroid storm without colliding with the meteors.

The controls used are "/", "[", "<", ">" which provide up, down, left and right movement respectively. These keys are a bad choice being bunched together and awkward to use.

Once 3-D Asteroids is running, instructions are displayed briefly, followed by details of the length of the approaching storm (usually 20-40 seconds), a short count-down and you're on your own.

The T.V. screen becomes the "front window" of your space-craft, and all you have to do is frantically press the correct keys to "skilfully" avoid the approach-ing asteroids.

The asteroids themselves give a reasonable 3-D effect and are flicker-free, resembling partially eclipsed planets which seem to give a rotating effect. However, trying to avoid these objects alone is not enough to make an interesting game and Program Power have turned a very good idea into a disappointment.

The price is £6.95 plus V.A.T. and it requires 5K memory (including 2K graphics).

# CAN LIFE EXIST IN JUST 1K?

## SINCLAIR'S GAMES PACK No 1

When there's only 1K of memory to play with, the programmer is faced with a real challenge.

Sinclair have come up with six games for its ZX81 and, although the games are necessarily simple in concept, Games Pack No. 1 represents good value at £3.95.

The software package consists of a C12 tape with three games on each side, along with program loading instructions and a short but descriptive summary of the actual playing instructions.

I particularly enjoyed the Orbit and Meteors games which involve, in the first case docking your spacecraft with cargo — rather tricky; and avoiding meteorites for as long as you can in the second game.

Sniper and Wolfpack are both games for those of us with blood-lust! Sniper involves making 40 sequential pot shots at a ran-domly appearing figure, the final score informing you how many times you managed to kill him.

Wolfpack is not a wolf shoot-ing game but, in fact, dropping depth charges on to a submarine, this is again hard to master.

The final two games were not so entertaining. Golf asks you to enter a number between 35 and 75 to determine the strength of your drive and see if you can drop the ball in the hole. By the way, don't expect too sophisti-cated graphics, this is just a line with a hole at one end. Life is another version of the cell generating game.

By entering a two letter code you build up a pattern of "cells" and according to several simple rules you can then automatically generate new cells to build up random patterns.

There were loading difficulties, but only on side two, and after loading the tape with the 16K RAM pack the problem was overcome.

# RESCUE MISSION

## GORGON

A remote planet's inhabitants are being terrorised by bird-like kidnappers who lift them from the surface and carry them away.

In Gorgon, you are the surface dwellers' best chance of survival, fighting off the waves of aliens in an Apple version of the arcade game, Defender.

Navigating his way above hazardous terrain the pilot can check his course on the radar.

The race that has taken over the planet is devious and brutal sending out bands of fighters to ward off any intruders. They steal the people from the surface of the planet by clutching them in the vice-like grip of their claws.

Using a joystick plugged into the Apple, you control a fighter plane. To fire, press the button on the side of the paddle and turn the wheel to the left or right to manoeuvre the aircraft altering the altitude to avoid the mountainous landscape.

The radar at the top of the screen shows what's coming towards you — both in the way of landscape and enemy aircraft. So by following that guide you can keep just ahead of the action before it appears on the screen.

If one of the surface dwellers wandering across the planet is kidnapped the plane's pilot can still swoop into action to save him. By moving the aircraft into position so that the plane is just touching the man in mid-air it automatically releases him from the creature's clutches.

The next step is to land him back on the surface of the planet so that he can run to safety. Your plane gets just three lives. The score is worked out according to the number of attacking ships and Gorgons you destroy, ranging from 20, 40 and 60 points. And if you fail to rescue a man from a Gorgon, or let him fall off your plane through dangerous flying you get 50 points deducted from your score.

Gorgon is a U.S. import and is available through Apple software dealers including SBD Software of Richmond for £18.95

# X MARKS THE POT

## SNOOKER

A new skill must be acquired by the players of Atari's snooker game.

Instead of mastering the cue, this game calls for a steady eye in positioning a white cross behind the ball you wish to hit. Wherever the cross is set, marks the spot where your ball should end up.

It takes a while to perfect your shot, so have a practice before you tackle the professional game. There is an untimed game to get the hang of it. You can soon judge and apply the power of your shot depending on where the balls are positioned on the table.

If only a slight touch with the cue is needed, then hit the fire button on the joystick when the column on the left hand side of the screen and table is at the bottom. That is the marker indicating the power behind the shot.

After the ball has been hit the white cross disappears momentarily from the screen. When all the balls have settled into their new positions the cross will reappear on the snooker table ready for your next shot.

Measure your shot and try to work out exactly where all the balls will go. The power indicator constantly moves so you don't have long to wait for it to reach the level you want.

Atari's software men come up to scratch in this game with the usual good graphics and colours but it takes a while for a player to grasp that he cannot actually line up his cue with the ball he wants to hit. It costs £19.95 and is available from North London based distributors, Ingersoll.

# NOT FOR THE PARANOID HIKER

## HITCH-HIKERS' GUIDE TO THE GALAXY

Time to grab your towel and set out to discover the galaxy. Harrow-based Supersoft's adventure game, based on Douglas Adam's **Hitch-hikers' Guide to the Galaxy** is a well thought-out attempt to reproduce the imaginative radio/T.V. series.

Extremely well written and programmed by Bob Chappell, the game favours those who watched the T.V. programme or read the two books available from Pan: **Hitch-hiker's Guide** and **Restaurant at the End of the Universe** — at least they will know what a Vogan is and how to use a Babel fish.

The object of the game is to take and then place a certain number of objects in certain places to gain points.

On your way to this elusive score you are bound to get lost in the "Total Disorientation Vortex Maze" or get lost in space. When this happens to you don't despair too much, there is a way out!

If you try and pick-up more objects than you can carry, then "Eddie", your shipboard computer, prompts you, you'll just have to drop something, but which one! Each object has its own key word for picking it up, or dropping it, e.g. if you wanted to pick up, "a big fat book of Vogan poetry" you could type "take book".

The usual command words apply to this game like: take, get, look, read. As in most other adventure games, using the "save" command enables you to save your exact position, with every object you've worked so hard to get or where you've dropped it, on tape.

Supersoft has received so many calls for help about Hitch-hikers that they now send a "hints" list out with the program — they even had a request from South Africa! I think I'll start a lost Hitch-hikers' club.

It costs £17 in cassette form and runs on a 32K Pet. Good Hitch-hiking!

# ComServe

## COMPUTER SHOP *PRESENTS*

*THE ELEGANT, EXPANDABLE*

# COMSERVE VIDEO GENIE HOBBYIST PACKAGE

This is a package of all the items we feel a beginner will need when he first starts to use his Genie.

The offer comprises a Video Genie EG3003 with 12K BASIC, 15770 bytes of user programmable memory, upper and lower case and graphics display, built in tape recorder and QWERTY keyboard, with sound kit and joystick sockets installed and two joysticks.

There is a user manual and a BASIC manual, and a programming for beginners book.

There are three cassettes with demonstration programs and games and useful routines including a STARTREK type game, SURROUND, CHECKOUT, HANGMAN, WORDFIND, FRUIT, MAGIC CARPET, a name and address list program and a pre-school letter recognition game. Four other games tapes will be included.

There are three blank computer quality cassettes for your own use.

There is also a head cleaning tape with a demagnetising action for the tape recorder.

There are four coloured folders for the manuals or for screen overlays.

The television is not included.

There is a one year's guarantee on parts and labour.

This package is available on ten day delivery, send your cheque for £395 with your order.

This machine is fully expandable NOW, a printer and/or Aculab may be connected to the console, or an expansion interface may be connected, which includes disk and printer drivers and spare S100 slots. The S100 bus in the expansion interface can take a huge selection of boards to cover most hardware needs, and this includes the ability to run other processors, including 16 bit ones. There is a massive selection of good quality software for all small computer applications including word processing, accounts, stock control, engineering applications, and educational use. It can run many other languages apart from BASIC, compilers and assemblers too.

Epson and Seiko printers stocked, from £230 inclusive.

Graphic games at £11.20 each inc. GALAXY, METEOR MISSION, NOVA (asteroids), ATTACK FORCE, COSMIC FIGHTER, INVADERS, SHOWDOWN, BASKETBALL, PINBALL, DEATH MAZE, LABYRINTH. Adventures at £13.85 each, ADVENTURELAND, PIRATE, GHOST TOWN, VOODOO CASTLE, THE COUNT (Dracula), SAVAGE ISLAND, SPACE ODESSY. Many, many others available NOW.

# REVIEWS

## NOW THERE'S NO EXCUSE FOR POPPING DOWN TO THE LOCAL

About the only thing the new Atari darts game doesn't have is that familiar T.V. commentator's soaring screech announcing the high score 'Wun-hundred-an-eightyyy!!'.

The graphics on this game, which runs on the Atari 400 and 800 personal computers, beats most others into a cocked hat. The picture on the screen shows the interior of a pub and it looks convincingly like the local with wooden beams lining the walls and ceilings.

A figure stands on the left hand side of the picture representing the darts player. His jumper changes colour according to whoever's turn it is.

When the game is in play the darts board itself is clearly marked out at the bottom right hand corner of the screen with the dart throwing hand hovering nearby.

An ear catching feature of the game are the sound effects. If you throw a dart which hits the wire on the board you hear the realistic chink of metal against metal and then a soft thud as it touches down on the carpet.

And if you miss the board completely but get the wall instead the sound effects are once again spot on, crashing into the wall and dropping to the ground with a clatter.

Kick off play by selecting the type of game you want from 301 to 901 and choosing a skill level to suit you between 0 and 9. Level 6 is about average and a good one to start on. Once you have typed in the player's initials the board appears in close-up on the screen, press start and you're off.

Then you play just like any 'normal' darts game. The computer keeps tabs on the score and flashes it up on the screen after each player has had his go.

But it's not as easy as it looks at first. The hand holding the dart hovers and you have to judge carefully when to fire.

So you have to make sure the finger tip is pointing at the numbered section of the board you want to hit and fire at that exact moment. Like any game involving skill it makes you want to improve your performance and continually beat your opponent. The game is for either one or two players.

At the beginning and end of the game a tune starts to play . . . and play . . . and play (and good graphics too) . . . pleasant to listen to at first but, after a while, it becomes tedious. The programmer concerned must have put a lot of effort into it but perhaps he could have spent his time better.

Apart from that, a standards setter.

Darts is available from Britain's Atari distributors, Ingersol for £29.95.

## THE SUBTERRANEAN TERROR

For those of you with the good fortune never to have come across a Wumpus, let me inform you that this species of cave dwelling amphibian is absolutely deadly.

The Wumpus inhabiting Texas Instruments' new T.I. 99/4 computer package is pretty typical of the species in this respect.

When you are hunting down his lair you must use all due caution. Should you blunder in on him at home, he will wolf you down without giving you a chance to fire. In fact your only chance of killing a Wumpus is to fire before you see him. Loose an arrow into his cave and you'll live to fight another day — but choose carefully because the Wumpus does not give those who miss a second chance.

A hopeless task it might sound in a massive complex of caves and twisting passages but luckily the Wumpus leaves clues to his whereabouts. In fact every cavern within two of his lair bears the taint of the creature.

But there are other hazards in this complex of caverns. Slime pits for example. These revolting green traps can do for you just as surely as the Wumpus, who — by the way — will wallow quite contentedly in the middle of one of these.

Among the other fauna present is a kind of bat with an extremely good memory. Once you have wandered, however innocently through his roost he will have committed your disturbing of his peace to memory and he will begin to grieve over it.

He works himself up into such a tizzy that next time you enter his cavern he will grab you and deposit you elsewhere.

Experienced Wumpus hunters — very few and far between — will search out the creatures in especially tortuous tunnels. They may attempt to do it very fast or they may even go in blindfold! Foolish people!

Wumpus brings the art of logical deduction to life, with just a pinch of luck as well. The graphics and sound effects are good and the cartridge costs £19.35 from T.I.

## REBEL AGAINST FARSIDE'S PRINCE

### TAWALA'S LAST REDOUBT

Benthi is the ruthless rebel leaderene with just 100 men and 15 rifles to her name and a planet to conquer, in Tawala's Last Redoubt.

This strategy game is the latest in the Galactic Saga series set on the planet of Farside which is ruled over by the selfish Prince Tawala.

The game takes its name from Tawala's fortress which Benthi stormed to win a famous victory. Your task is to recreate her tactics and planning which brought this victory about.

At the start your forces are hopelessly outnumbered and badly equipped. But using your intelligence officer's reports wisely and sending messengers to Farside's other chiefs and spies to watch for Tawala's approach, you build up and stay out of Tawala's reach until you are ready to take on his Last Redoubt.

Benthi's only advantage is the intelligence reports of Chief Paoli's team. This right-hand man knows Farside's layout like the back of his hand. He has dossiers on each of the other four chiefs, Anson, Beonj, Covoi and Dumas — knowing which villages or camps they control, their strengths and weaknesses

Will the ruthless Chief Dumas take your offer of money and send you 100 men or will he return your messenger's head on a plate? While awaiting developments send spies to discover Tawala's movements — is he marching on your camp? He probably is and using Paoli's map you had better order "Break-Camp" and move on.

When you feel Benthi's forces are ready it is time to attack Redoubt and you must move your army to Tawala's stronghold. "Attack Redoubt" flashes on the screen and you move your army in. Then all you can do is sit back and await the outcome, hoping your forces are well equipped and numerous enough to defeat Tawala.

It runs on an Apple in 48K, costs £15.95 and is available from Pete & Pam Computers of Lancashire.

## UNDER AND OVER THE WALL

### ESCAPE FROM COLDITZ

The most notorious of World War II prisons Colditz was famed for the tough time POWs had in escaping and the few successful attempts recorded.

In Escape from Colditz you're given just as hard a time as those allied soldiers went through to get out of the notorious prison castle.

Helping you out at the start of the escape attempt are your fellow prisoners of war who have amassed a selection of goodies to aid you.

On the list are things like a trenchcoat, a grappling iron, a map of the district, money, chocolate, tobacco and a gun. Remember that some Germans are particularly susceptible to bribes and for the price of some sought-after chocolate they may turn a blind eye to your escape.

Guard dogs, locked doors and searchlights add to your problems.

The Sharp MZ-80K, which the game runs on, understands only a few word commands. You can instruct it to move you from one place to another or to take actions when necessary. As in all the usual adventure games you must give commands using words like get, take, search, and directional instructions like north, south, up and down.

It's fun to play but like most adventure games you end up banging your head against a wall with frustration when you keep going round in fruitless circles. London based Sharpsoft supply Escape from Colditz on cassette from £8.95 on a 48K Sharp.

## WHAT A LOAD...!

### SHIP OF THE LINE

Two games from Croydon based Premier Publications, who have the audacity in the light of this cassette, to style themselves "Britain's biggest hobby software specialists".

If the rest of the software is as badly presented as this cassette then they should think again!

Ship of the line proved impossible to load, and this was not surprising when the program is interspersed with people talking!

Alpha-square, which was a very unreliable loaded, is a simple letter puzzle where the 24 letters A to X are arranged in a 5×5 grid, with one empty space. The object — just like those plastic puzzles — is to get the letters into alphabetical order moving individual, a whole row of letters.

The instructions come on a scrappy piece of paper, but were quite clear. The graphics are good with no flashing screen a letter move, and the cassette sells for £3.95.

It was a pity about Ship of the line which costs £5.95 as it seemed to be quite a well thought out warship game, with varying wind direction to complicate the tactics.

It runs on a Sinclair ZX81 with a 16K RAM pack.

Also available for the Sinclair's new memory pack are two games from JRS Software of Worthing, which use the graphics facilities near their best.

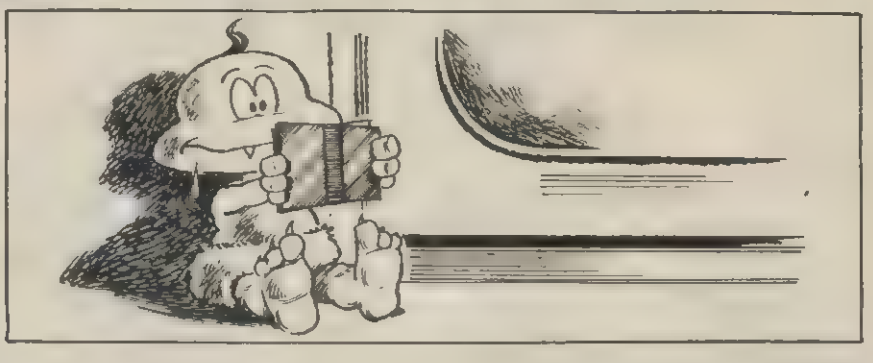
Slalom, £4.95, is a race against time. You have to negotiate 14 posts, making sure that none are missed, or that none are hit. The concept of the game, and its implementations, are good. However, with a little thought it could have been much better. The posts are all in a straight line and equidistant. A simple key sequence of: cursor down, cursor down, cursor right, cursor right and so on gets you to the finish safely.

Black Holes, £6.40, is quite a fiendish game. A pattern of reverse field zeros approaches constantly. Within this pattern is a pathway to be navigated using the cursor left or right keys.

In both these games the documentation is not too hot.

# DOWN TO BASIC

BY MOIRA NORRIE



## DIVIDING RULES

By experiment you may have already discovered the order in which a computer will perform arithmetic operations when faced with a choice.

In a simple program like:

```
10 PRINT 3+2*5
20 END
```

the answer would be 13 because, when faced with a choice between multiplication and addition, it will always do the multiplication first.

Similarly, by trying other examples, you would find that it always gives preference to the multiplication and division operators over the addition and subtraction operators.

So 3-4/2+6 gives the answer 7 and 4*2-3 gives the answer 5.

What would the answer be in the following case? 12/6*2. Here the computer has a choice between multiplication and division. If the division is done first, then the answer will be 4; if the multiplication is done first, the answer will be 1. Multiplication and division are said to be of "equal precedence", meaning that there is no hard and fast rule as to which one will be done first. In this situation, the rule that is adopted is that the computer works from left to right — so that in this case it would do the division first; not because it has any natural priority over the multiplication, but because it occurs first as we read the expression from left to right. Addition and subtraction are also of "equal precedence".

As yet, I have not mentioned the exponentiation operation (i.e. working out powers of numbers). Exponentiation has priority over any of the other operations.

3**2+5.

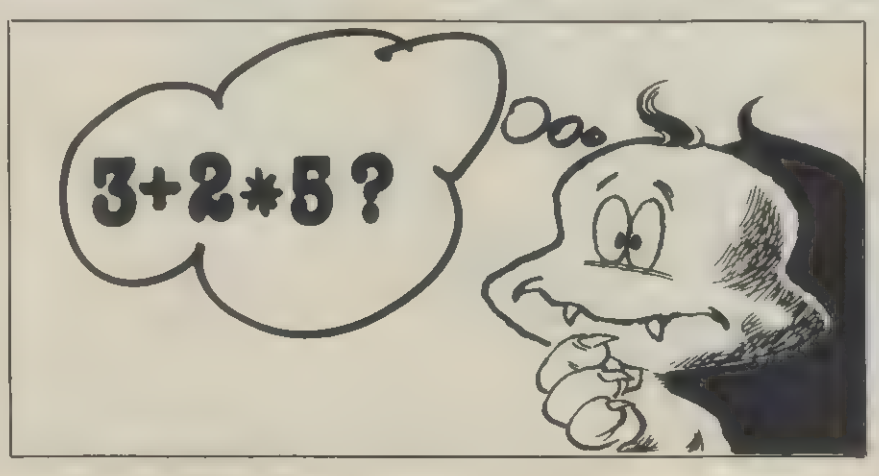
This expression would therefore give the answer 14. (Remember — exponentiation is represented by either "**" or "^".)

At this stage, these rules of precedence may seem very complex, but the important thing at the moment is that you learn to be careful when writing expressions for calculations. Don't worry — if in doubt, try it out and see what happens!

If at any time you wish to override such rules of precedence (or if you are not sure of the rules of precedence), you can use brackets. For example:

(3+2)*5

will cause the computer to perform the addition first and the final answer will be 25.



## CALCULATING PLUS

You are now in the position that you should be able to write programs to perform any straightforward calculation. You may be asking yourself: "Why use a computer rather than a simple calculator?" One of the features of using a computer is that you can write a program which will perform the specified calculation for any set of values and not just one particular set of values as you have done until now.

To illustrate this, I will return to the simplest of examples — a program to add two numbers. This time, I will write a program that will add any two numbers — these numbers will be provided when the program is RUN.

```
10 INPUT A,B
20 PRINT A+B
30 END
```

This program uses "variables" A and B to describe the calculation to be performed on the numbers.

If you RUN this program, the computer will wait for you to type the values of A and B when It encounters the "INPUT" instruction. It will print the prompt "?" so that you will know that it is waiting for "input". You then type in the required values, separated by commas if there is more than one, then press the "Return" key. Therefore, for the above program you should have something that looks like:

"? 3,2" printed by the computer.

In this example, I used the names A and B to represent the two values. As these are only "dummies" to allow us to des-

cribe the operations the computer has to perform, it is not significant that I used these particular names. Some versions of basic restrict you to names consisting of a single letter or a single letter followed by one of the digits 0,1,2,3,...9. The following are examples of names that could be used: A, X, Y2, T9.

Other versions can cope with longer names for variables. This means that you can have more meaningful names such as "PROFIT" or "VALUE 66". Note that I have always written my programs in uppercase letters.

Again, many systems are more flexible and permit lowercase and uppercase letters. I shall always use the more restricted forms as my programs should then work, as they are given, on the majority of systems.

## REPEAT FIVE TIMES

Another powerful feature of computers is that it is easy to repeat calculations. It is no more difficult to write a program to repeat a calculation a thousand times than it is to write one to repeat it five times.

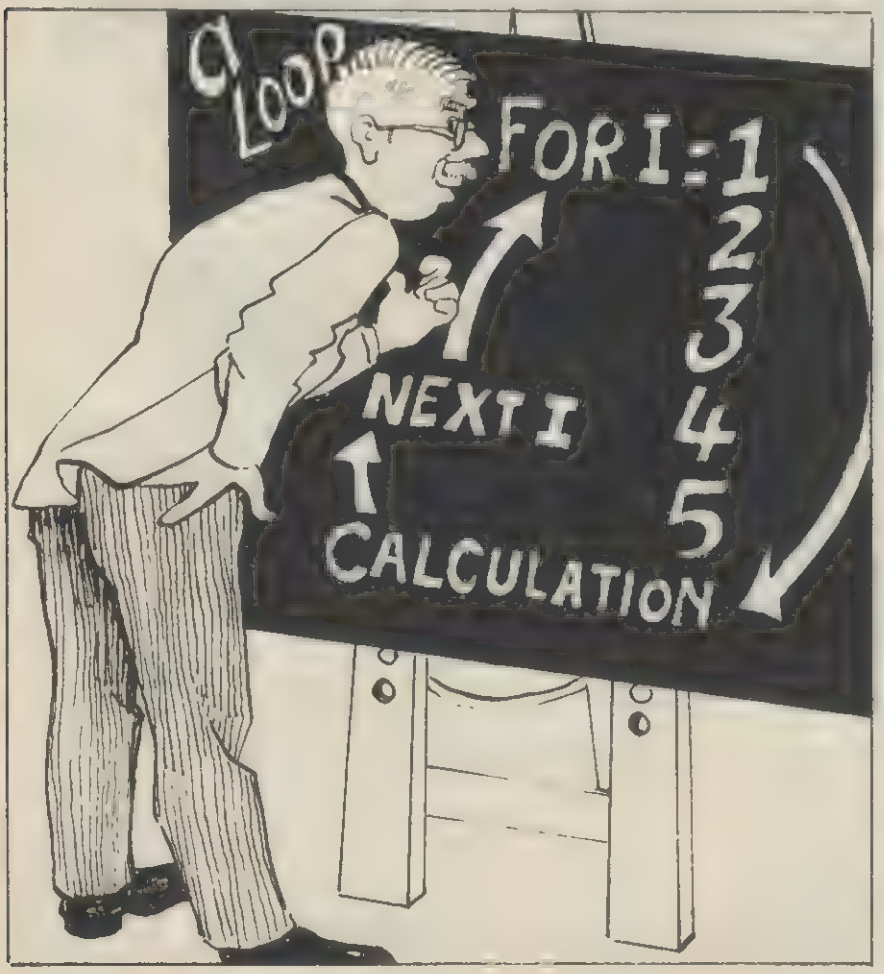
The programs I have looked at so far have been of the form
INPUT data
PRINT answer to calculation on data

Now let's look at examples where these instructions are repeated a given number of times. For example, I might have a program of the form:
Repeat five times
INPUT data
PRINT answer to calculation on data
end of repeat

I have used a "loop". In this example, I "loop" five times — meaning that I loop back and repeat the instructions five times. To illustrate how you can write a program to do this, I'll write a program to add, not one pair of numbers, but five pairs of numbers

```
10 FOR I=1 TO 5
20 INPUT A,B
30 PRINT A+B
40 NEXT I
50 END
```

Two new instructions have been introduced — the FOR statement and the NEXT statement. These will be discussed in more detail next month. For now, it suffices to say that they bracket the instructions to be repeated, and that the variable called "I" acts as a count of the number of times round the loop.



## MESSAGES IN QUOTES

The PRINT instructions used so far have been used to print the answer to a calculation. PRINT instructions can also be used to print messages. To do this you simply enclose the message that you want printed in quotes. A simple program to illustrate this is:

```
10 PRINT "THIS IS A TEST"
20 END
```

I will leave you with the following example program. It includes loops and the use of the PRINT instruction to print messages. Try running this program and then see if you can work out what each instruction does. I will go through it in detail next month.

```
10 FOR I=1 TO 2
20 FOR J=1 TO 4
30 PRINT "XXXX     XXXX     "
40 NEXT J
50 FOR K=1 TO 4
60 PRINT "     XXXX     XXXX"
70 NEXT K
80 NEXT I
90 END
```

## NEXT ISSUE

Most computer games involve graphic symbols — these are the building blocks used for drawing pictures on the screen. Many of the versions of Basic developed for microprocessor systems include special instructions for graphics. The more specialised instructions will be dealt with later in the series. Next month, I will describe how you can achieve simple graphical displays using the PRINT instruction.

NEXT ISSUE

# "My finger slipped, I hit the button, and nuked Washington by mistake."

Whether your kind of fun is saving the World in a war game, sharpening your chess strategy or piloting a 747, computer games reach new levels of exhilaration in terms of excitement, intellect and dexterity.

And, to help you get the most fun out of your computer, there's a brand new monthly magazine: Computer & Video Games.

It brings the best entertainment out of all types of computer, from personal Sinclairs, Ataris, Tandys, VICs, Apples and PET's right up to mainframe IBMs.

Every issue's packed with pages of games listings for you to program. And you don't have to be a computer expert.

Each month there's reviews of new computer and video games, regular pages on chess, bridge and mainframe games. Brush up or learn programming with our regular workshop, and discover the fun of creating graphics and adding sound to the games you invent yourself. There's also regular brain teasers (some with prizes) plus the secrets of beating arcade video machines.

Computer & Video Games is packed with new levels of stimulation for people who get fun out of computers.

The second great issue is out today at all good newsagents.

And on the front cover you'll find the programmers most useful little tool. A template to run up and down listings to prevent you skipping lines.

Saves a lot of de-bugging time! Using the template, you can enter what is probably the silliest competition on which you've ever bent your brain.

I would like to take out an annual subscription. I enclose a cheque/P.O. for £10, (£20 overseas) for twelve issues. Computer & Video Games, Bretton Court, Bretton, Peterborough PE3 8DZ.

# At last. A watch that's fun.

Imagine. It's a cold damp winter's day. You return to your car to realise that you've left the lights on all day. You kick the car and stomp off to phone for help. An hour later you return to await the arrival of the mechanic. Back in your car without lights or radio, you think that sometimes life is anything but fun!

You reach into your pocket and take out a watch about the size of a tiny calculator. You press the time button and see you should have been home about an hour ago. You press the game button and start to play. The game's [illegible] and features a number of electronically controlled 'Kings of the Jungle'. You have to stop them escaping from their cage by moving two lion tamers into their path. Suddenly life is fun again, the mechanic arrives and after he has a few games you're on your way.

There's more good news. There are five such games in the Game and Watch series from CGL – Headache, Parachute, Octopus, Lion & Manhole. Sometimes life can be fun.

**Game and Watch**

You can buy Game and Watch products at larger branches of Boots, Rumbelows, Selfridges and Hamleys.

# SOFTWARE GLOSSARY

## A beginner's guide to plain jargon

**ALGORITHM** A process or set of rules to carry out a task or solve a mathematical problem.

**ARRAY** A series of items (data or information) arranged to form a meaningful pattern.

**ARRAY SUBSCRIPT** An indexing notation e.g. X(1), X(2) where 1 and 2 are subscripts, used in an array.

**BITS** BInary digiTS. The 0s and 1s that make up the binary code computers understand.

**BUG** A slang term given to a mistake in a computer program which prevents it working. It can refer to a mechanical, electrical or electronic defect in a computer.

**BYTE** A term to measure a number of bits (binary digits), usually eight bits to a byte.

**CHIP** A tiny piece of silicon which holds all the components that make up a microprocessor.

**CHARACTER STRING** A sequence of characters in a row.

**CONCATENATE** To unite in a series, link together or chain.

**CURSOR** A small square-shaped mark which indicates where a character will appear on the screen. It can be moved around the screen using certain keys on the keyboard.

**DECODE** To interpret and determine meaning, and to translate a code into more understandable form.

**ELECTROLYTIC CAPACITOR** A component which allows the passage of AC current but not DC current.

**ELLIPTICAL** Of or relating to an ellipse or ellipsis.

**ELLIPSIS/ELLIPSE** Omission from sentence of words needed to complete construction or sense.

**ERRATA (Erratum)** Errors in printing or writing, usually in lists.

**EXPONENTIATION** A mathematical operation used to calculate powers of numbers.

**FOR . . . NEXT** A Basic statement which is an instruction used for repetition of a sequence of program statements (see loop).

**GOSUB** A Basic command instructing the computer to go to a subroutine in a computer program.

**GOTO** A Basic command which tells the computer to jump to another line in a computer program.

**GRAPHICS CHARACTERS** The name given to pictorial representation of data such as plotted graphs, engineering drawings and computer games.

**HARDWARE** A general term given to all pieces of electronic and mechanical devices which make up a computer system, i.e. the actual machines.

**INPUT** Information which is fed into the computer.

**INTEGER** A number which does not contain a decimal point, i.e. a whole number.

**K** Abbreviation for Kilobyte.

**KILOBYTE** A measurement of memory capacity. 1024 bytes of memory. So 8K is equivalent to 8192 bytes.

**L.E.D. (Light Emitting Diode)** Provides a simple display and consists of an electron tube which lights up when electricity is passed through it. Used as an alternative to liquid crystal displays in calculators and watches.

**LET** A Basic statement which defines a variable. E.g. LET A=0.

# SOFTWARE GLOSSARY

A beginner's guide to plain language

**LOGICAL NETWORK** A series of interconnected points linked by communications facilities.

**LOOP** A Basic function referring to the repeated execution of a series of instructions for a fixed number of times.

**MEMORY** A measurement of how much information a computer can cope with.

**MEMORY MAPPED SCREEN** Data called up on the V.D.U. screen to help when processing scattered program fragments in the computer's memory.

**MESSAGE** A sequence of letters or symbols which has some sort of meaning.

**NEXT** (See FOR . . . NEXT).

**OSCILLATE** To undergo high-frequency alternations as across a spark gap or in a valve transmitter circuit.

**POKE** An instruction used in most versions of Basic allowing you to store integers in a specific place in memory.

**PRINT** A Basic command which tells the computer to perform a calculation in a program.

**PROCESSING** Handling and manipulating computer data.

**RAM (Random Access Memory)** This is a number that can only be repeated by chance. As it is like throwing a dice these numbers are useful in games.

**ROM (Read Only Memory)** A memory chip which can only be read from and not written into.

**ROUTINE** A set of coded computer instructions used for a particular function in a program.

**SCAN** To examine stored information for a specific purpose as for content or for arrangement.

**SOFTWARE** The programs fed into a computer, which make them perform what we want them to do.

**STRING** A connected sequence of characters, words or other elements usually symbolised with the $ (dollar) sign.

**SUBROUTINE** A computer program routine that is translated separately, generally used in several computer programs or several times in one program.

**TERNARY** Relates to the number system of the base three.

**USER PORT** The entry channel which a data set is attached to.

**VALUE** The numerical quantity of a data element, and is the number assigned to a variable.

**VARIABLE** A symbol whose numeric value can be changed at all times. It is used when writing programs.

## A GUIDE TO THE LOW-COST COMPUTERS /AI

**ACORN ATOM** Cambridge based Acorn Computers manufactures the Atom machine which has a memory capacity of 2K, but it can be upgraded to 12K.

It must be plugged into a television and is available in either kit form or ready built. As a kit it costs £120 for the 2K computer and £150 for the finished product. For a more powerful system, 12K, the price stands at £220 (in kit) and £250 completed.

Acorn also makes the Systems 1, 2, and 3 which cost between £69 and £750. These are available direct from Acorn or through the firm's distributors

**APPLE** The Apple has a solid software base for both business and entertainment applications. The machine comes with a memory capacity, ranging from 8 to 48K. You can buy joysticks and paddles to plug in for use with computer games. Colour graphics can be used with a colour television.

The 48K machine costs £695 and is obtainable from Apple U.K., formerly Microsense, which is based in Hemel Hempstead, Hertfordshire

**ATARI 400/800** Most of the software for the Atari microcomputers are games or educational, with business applications only recently being introduced

The basic 400 with 16K RAM costs £340 direct from Atari's UK distributors, London-based Ingersoll Electronics. The 32K version sells for £395. Peripherals for the machines, like disc drive units and cassette recorders can also be obtained from Ingersoll for £325 and £45 respectively. The 800 is expandable to 48K and the 16K machine sells for £645.

**BBC COMPUTER** The computer adopted by the BBC to sell in conjunction with its forthcoming series is based on the Acorn Proton. The BBC has developed its own Basic to be used on the machine. Minimum memory is 16K RAM, maximum being 32K. Present plans for the machine are dual purpose, both business and games. Optional extras include joysticks, paddles, disc drives and a cassette for tape loading.

Price is put at £235 for the 16K computer and £335 for the 32K version

**DAI** This is a personal computer made by Data Applications for both business use and home entertainment The U.K. system (it is made in Belgium) has 48K RAM as well as full colour and sound commands. Data Applications is based in Cirencester, Gloucestershire. The 48K system now costs £595

**NASCOM** There are two Nascoms available at the moment, both can be used for business and games. The Nascom 2 is the more powerful of the two with 8K RAM and with a Basic interpreter.

It can be bought in kit form or off the shelf complete. The kit is £125 for 1K RAM and £140 for the finished 1K product. £225 will secure an 8K kit.

**NEWBRAIN** This is a hand-held computer unit which is at the low end of the price bracket. For 2K RAM you pay £159 upwards and it is expandable to 20K of memory. Hobbyists often opt for this machine because of its low cost and it is used for general business and for playing games. An expansion unit is available which supports floppy disc drives, a printer and a visual display unit. It is available from the Grundy Group.

**OHIO SCIENTIFIC** Ohio Scientific (OHI) makes the Superboard which is aimed at the hobbyist market. Its memory capacity starts at 4K RAM and is expandable to 32K if you buy the add-on board.

Other machines in this family include the Challenger 1, 2, 3, and 4. These are essentially cased versions of Superboard. The Challenger 4 is the cheapest of these at £450 and is similar to the Challenger 1 but has colour and sound options.

**PET** Made by Commodore Business Machines, the Pet ranges from 8K RAM to 32K RAM. They are used mostly by small businesses for general applications but have a hefty hobbyist following. It is available from Commodore of Slough or their many UK dealers at a starting price of £460. Compatible peripherals are available for the Pet, including disc drives, cassettes for loading tapes and printers.

**SHARP MZ-80K** One of the more expensive personal computers on the market it is used for both business and home entertainment. Memory capacity for the machine starts at 16K with a top limit of 48K and disc drives or cassette as required. The price is £460 for the 48K unit with add-on units costing extra.

**SHARP PC-1211** The smallest computer in the Sharp range. Sharp classifies it as a pocket computer and it is programmable in Basic It also has a cassette interface for loading and costs upwards of £85 from Sharp itself in Manchester or from its appointed dealers.

# CORE

## S AVAILABLE IN THE U.K.

**SINCLAIR** There are two types of Sinclair microcomputer available for under £100. Sinclair really brought the microcomputer into the home: The machines are ideal for learning the rudiments of computing but are limiting graphically. The ZX80 has 1K of memory and is no longer in production. The ZX81 sells for £49.95 for 1K in kit form. The 16K RAM packs cost £49.95.

**SORCERER** The Exidy Sorcerer is a home computer with a sizeable games following but it is one of the more expensive of the microcomputers, costing upwards of £749. Memory amount ranges from 48K to 55K and there is a plug-in ROM pack for extra capacity. Disc drives and visual display unit are an additiopal cost. Sorcerer's can be obtained from a Cornish firm, Liveport of St Ives.

**TANDY TRS-80** Tandy's TRS-80 Model 1 is a machine which is often used for games and is well-supplied with software for both entertainment and business applications. Its memory capacity goes from 4K to 16K but there is an expansion unit available upgrading it to 48K if you want the extra memory. The Model 1 is the cheapest of the Tandy range.

The Model 1 costs £459 but comes complete with a monitor to use as a VDU and a cassette. The Model III is an integral unit made up of a keyboard, 12 inch screen and two slots for 5¼" discs and has a printer interface. It costs from £499.

**TANGERINE** Tangerine Computer Systems produces the Microtan 65, a microcomputer for games and personal use like household accounts. It comes in kit form and is expandable from an initial 1K memory up to 48K of RAM. The Microtan 65 costs £79.35 for the 1K kit, or £90.85 assembled. Tangerine is based in Ely, Cambridgeshire.

**TI-99/4** This computer has recently been re-launched by Texas Instruments. It consists of a separate keyboard with graphics facilities in full colour and now plugs into a UK television. Software available for it from Texas Instruments is mostly business and educational but the firm has recently introduced a bundle of games to run on the computer. It has 16K RAM and uses tapes, discs or plug in games cartridges. You can buy one of these from T.I. itself or through some of the high street retailers like Rumbelows for £299.

**VIC-20** The VIC is the much publicised baby of the range of microcomputers from Commodore of Slough. At £185 it is one of the cheapest. Deliveries to dealers have just started. The VIC has full colour graphics on a colour T.V. and there are joysticks available. Although Commodore are plugging the business use of the machine it is also tipped to be a hot games computer because of its colour graphics and low cost.

**VIDEO GENIE** The Genie is made by E.A.C.A. and is a popular games machine. It is compatible with the Tandy TRS-80 Model 1. With 16K to 48K RAM there are disc drives available. The basic unit costs from £369 and is available from Lowe Electronics of Matlock in Derbyshire.

**U.K.101** This machine comes in either kit form or ready built with memory capacity of 4K to 40K (with an expansion board). It contains television and cassette interfaces so you don't need a V.D.U. The U.K.101 is a popular computer for playing games and there is a lot of software around for it. The kit costs £149 for 4K, ready built, it sells for £199.

# CHOOSE ATOM POWER

## At work or play – everything you need in a personal computer

**The Atom is a machine to be used. Every day, day after day. It's a full function machine – check the specification against others. It's rugged, easy to operate built to last and features a full-size typewriter keyboard.**

**Just look at some of the features!**

- More hardware support than any other microcomputer
- Superfast BASIC – can be updated to BBC BASIC if required
- High resolution and comprehensive graphics ideal for games programmers and players*
- Integral printer connection*
- Software available for games, education, maths, graphs, business, word processing, etc
- Other languages: Pascal, FORTH, LISP
- I/O port for control of external devices
- Built-in loudspeaker
- Cassette interface
- Full service/repair facility
- Users club

* Expanded version only

**Optional Extras**

- Network facility with Econet
- Disk
- PAL UHF colour encoder
- Add-on cards include 32K memory, analogue to digital, viewdata VDU, disk controller, daisywheel printer, plus many, many more!
- Power supply

**FREE MANUAL**

The Atom's highly acclaimed manual comes free with every Atom and leaves nothing out. In just a while you'll be completely at ease with your new machine! Within hours you'll be writing your own programs

**YOU AND YOUR CHILDREN**

More and more schools are buying Atoms. More and more children will learn on an Atom. You can give them that extra familiarity with an Atom in the home

ACORN COMPUTER

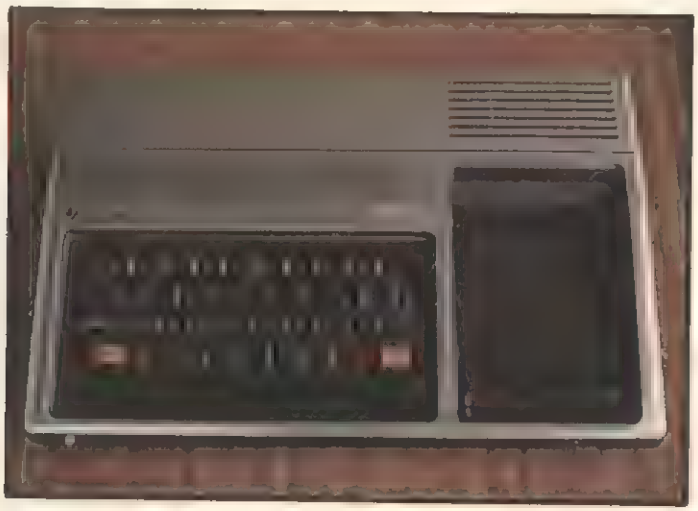
# TEXAS INSTRUMENTS TI-99/4



TEXAS INSTRUMENTS TI-99/4 *(illustrated)*
Can be used within minutes of being unpacked. Anyone can use it without any previous computer or programming experience. With 16K RAM as standard an extra 30K ROM can be added with TI's Solid State Software Command Modules Special features include 16 colour graphics capability, built-in music synthesizer, equation calculator Check out the exciting range of Educational, Home Management and Entertainment programs.
£299.95

TI SOLID STATE SPEECH SYNTHESIZER
This optinal Speech Synthesizer enables the TI-99/4 to literally speak — to provide verbal prompts and special messages to the user. It actually reproduces the human voice electronically. 370 words are built in and plug in modules will add hundreds more. This Synthesizer requires the Solid State Speech Editor Command Module.
£99.00

TI DISK MEMORY DRIVE
The Texas Instruments Disk Memory Drive is a mini-floppy disk mass storage system with a 1 to 3 disk memory drive capability. Use of the TI Disk Memory Drive requires the TI-99/4 Disk Drive Controller, which can control up to three drives. The TI-99/4 Home Computer mass memory system is capable of storing 90,000 bytes of information on each floppy disk.
Disk Controller £199.00
Disk Drive £399.00

TI RAM EXPANSION
32K extra Ram which expands the total to 48K
£299.00

TI THERMAL PRINTER
Permits printing of data in a 32 column, 9×7 dot matrix character format at a speed of 30 characters per second. It is controlled from TI BASIC for printing results and can list programs from the computer memory. Spacing between lines can be varied under program control and special characters using the 5×7 matric format may be defined in user programs. In addition to standard letter and numbers, the printer has 32 pre-defined graphic symbols for printing charts and graphs.
£269.00

TI THERMAL PAPER
Pack of two rolls.
£5.50

TI RS-232 ACCESSORIES INTERFACE
This interface enables you to connect a wide range of serially formatted accessory devices, including those from other manufacturers. It is not required for peripherals manufactured by Texas Instruments (except the Telephone Modem).
£149.00

TI WIRED REMOTE CONTROLS
These 2 optional remote controllers are used to position or move objects on the screen. Each unit includes eight position stick and side mounted action button
£29.95

TI CASSETTE CABLE
Allows connection to standard domestic cassette recorders for program and data storage.
£9.95

# PROGRAMS

DON'T FORGET ALL PRICES INCLUDE P & P AND VAT

# ATARI 800

ATARI 800 PERSONAL COMPUTER SYSTEM *(illustrated)*
The Atari 800 is a top of the line personal computer system. It's expandable memory, advanced peripheral components, comprehensive software library and modular design assure that it will never become obsolete.
Whether it's for Business, Household Management, Education or Entertainment, the Atari 800 can be tailored to specific needs and has been designed to change as those needs change. This "timeless" computer system can be used by people with no previous experience, although it doesn't compromise capability for the sophisticated user.

*FEATURES & TECHNICAL SPECIFICATIONS:-*
Colour: 16 Colours, each with 8 intensities.
Sound: Four independent sound synthesizers for musical tones and game sounds. Four octaves. Variable volume. Internal Speaker.
Memory: 16K Bytes of RAM expandable to 48K. 10K Bytes of ROM Operating System.
Keyboard: 57 full stroke alphanumeric keys plus 4 function keys.

£645.00

# ATARI 400

ATARI 400 PERSONAL COMPUTER SYSTEM *(illustrated)*
It doesn't take a computer background to learn how to use the Atari 400. This "general purpose" personal computer can be used for:

* Business & Household Management
* Education Applications
* Entertainment

It's affordable and it's easy to use. The Atari 400 will bring creative and exciting uses ranging from music, art, education and

extraordinary entertainment for the entire family.

*FEATURES & TECHNICAL SPECIFICATIONS:—*
Colour: 16 Colours, each with 8 intensities.
Sound: Four independent sound synthesizers for musical tones or games sounds. Four octaves. Variable volume. Internal speaker, (in addition to audio through TV).
Memory: 16K Bytes of RAM expandable to 48K. 10K Bytes of ROM Operating System.
Keyboard: 57 key monopanel alphanumeric keyboard plus 4 function keys.

£345.00

ATARI INTERFACE MODULE *(illustrated)*
This interface module has four EIA RS232C compatible ports, an 8 bit parallel output interfaced port for connection to the Atari Personal Computer Systems. This allows almost limitless expansion to the Atari Computer System. The serial ports allow connection to almost any computer peripheral that is RS232C compatible.

£135.00

ATARI 810 DISK DRIVE *(illustrated)*
This Disk Drive can be used with many Atari Personal Computer System peripherals. A minimum 16K of Ram is required to operate this drive unit. The Atari Personal Computer System will control up to four 810 Disk Drives giving your system over 368,000 Bytes, or over 92K Bytes per Disk Drive.

£345.00

ATARI 410 PROGRAM RECORDER *(illustrated)*
This program recorder provides users of Atari Personal Computers with a method of storing programs and data in computer readable form. In addition to a digital track, and audio track can be recorded on the cassettes. This capability allows the user to both run programs and listen to voice or music through the television speaker.

£50.00

ATARI 825 80 COLUMN PRINTER
The 825 Printer is a versatile dot matrix impact printer that can handle almost any printing task. It can print lines up to 8 inches long in four different character modes: monospaced characters at 10 characters per inch, condensed characters at 16.7 characters per inch, proportionally spaced characters and double width characters. It can be set to justify the right margin, execute forward or reverse line feeds, half space or underline. All character modes are set by control codes from the computer.
This printer can handle three kinds of paper: single sheet, fan-fold and roll paper.
The Atari 825 Printer connects easily to the Atari 850 Interface module which is requred for the operation of the Printer.

£550.00

ATARI PAPER Pack of two rolls £5.50

# 12 MORE PROGRAMS

**Club Price*

disappear from the screen momentarily, but it can be hit on its return.
Atari Cart £29.95 *£26.95

VIC-20 COLOUR COMPUTER *(illustrated)*
The Commodore VIC-20 is incredibly low in price, but still offers the quality and features you don't want to be without. The VIC-20 has high resolution colour video and excellent sound facilities. Moreover, it has been designed so that anyone in the family can operate it with ease and confidence. Even someone using a computer for the first time will have no problem operating the VIC-20. Full RS232C compatibility.

*Features & technical specifications:—*
Colour: 16 Screen Colours and 8 Border Colours.
Sound: 3 Audible Tone Generators, each of 3 Octaves — and a whie noise generator for sound effects.
Memory: 5K Bytes of RAM expandable to 29
Keyboard: Full qwerty Keyboard with 4 special keyboard keys.

*£189.95* *£180.45*

VIC-20 TAPE CASSETTE DECK
A low priced cassette player for storing programs or data. Uses ordinary cassettes.

*£44.95*

VIC-20 DOT MATRIX PRINTER
Tractor-feed, 80 character-per-line, 30 characters per second printer.

*£229.95*

VIC JOYSTICK
Hand-held joystick units for games use; available in Pair or Single configuration.

Each *£14.95*

VIC-20 LIGHT PEN
This high quality light pen works in both the normal and Hi Res modes on the Vic allowing simple interaction with the Vic without keyboard entry.

*£28.75*

GAMES PORT MULTIPLEXER
This device connects to the games port of the Vic and Multiplexes pot x and y lines under software control enabling pairs of analogue joysticks to be used for sophisticated multi-player games.

*£37.95*

VIC-20 GAMES PORT ADAPTOR CABLE
A two into one adaptor for use with both joysticks and light pens. A must for those who require full control of games with graphics.

*£19.84*

VIC-20 ROM SWITCH BOARD
An inexpensive unit which plugs direct onto the Memory Expansion Port of the Vic and allows the insertion of up to 4 ROMS for games or toolkit aids etc.

*£44.85* *£40.35*

VIC-20 RS232 INTERFACE
Allows Vic to work as Mainframe Terminal, Drive a Qume Daisywheel or a Paper Tape Punch etc. etc. This RS232 fully implemented interface that we offer contains a master power unit which can double Vics ability to support add-ons and has an external socket to allow the supply voltages plus 5V, plus 15V-15V to be used for other devices, memory expansions, cassette drives, light pens, printers etc.

*£56.35*

VIC-20 RS232 INTERFACE (LOW COST)

*£19.85*

VIC-20 TOOLKIT
For those who know toolkit on PET we now have facilities for VIC. Renumber, Auto etc.

*£28.75* *£25.85*

VIC-20 MEMORY

# BOOKS & SUBSCRIPTIONS

*Club Price

WHICH COMPUTER? — Monthly magazine for business computer users.

12 issues. £12.00 *£10.00

COMPUTER & VIDEO GAMES — monthly magazine packed with games programs for the Apple, Tandy, PET, VIC, Sinclair and many other computers.

12 issues £10.00 *£8 00

EDUCATIONAL COMPUTING — monthly magazine about computing in schools, colleges and universities.

12 issues. £6.50

GOOD COMPUTING BOOK FOR BEGINNERS — paperback telling you all you need to know about computers with glossary of terms you may encounter.

£1.95

THE CP/M HANDBOOK — *R. ZAKS*
A simple clear and practical handbook for users of CP/M equipped computers Step by step instructions on the use of CP/M for beginners and comprehensive description of all CP/M facilities and resources for advanced operators.

£11.50

INTRODUCTION TO PASCAL, INCLUDING UCSD PASCAL — *R. ZAKS*
Comprehensive guide to standard and UCSD Pascals. Step by step instructions for learning PASCAL.

£11.50

MICROPROCESSORS — FROM CHIPS TO SYSTEMS — *R. ZAKS*
The basic text on micros for everyone with a technical or scientific background. This book teaches all the fundamentals of microprocessors step by step.

£9.00

MICROS — INTERFACING TECHNIQUES — *ZAKS & LESEA*
This comprehensive book introduces the basic interfacing concepts and techniques, then presents the implementation details from hardware to software.

£12.10

PROGRAMMING THE 6502 — *R. ZAKS*
This book is an educational text designed to teach programming, using the 6502 It does not require any prior knowledge, yet can be used to advantage by anyone wishing to familiarize himself with the 6502. An invaluable book for owners of the PET, Apple, Kim, etc.

£10 25

PROGRAMMING THE Z-80 — *R. ZAKS*
Another in the highly successful Sybex Series by Rodnay Zaks. This book combines the function of a teaching text, that Sybex do so well, with an extensive reference section. The book is much more than an introduction to the Assembly Language syntax of the Z-80.

£11.50

THE BASIC HANDBOOK — *D. LIEN*
The expanded Second Edition gives you twice as much information as the first, explaining nearly 500 BASIC words. The cross reference Encyclopedia covers virtually every Basic speaking computer in the world, and includes chapters on interlocking subroutines, alternate programming techniques, converting programs from one computer to another, plus special sections on Disk Basic, TRS-80 Basic, Atari Basic, Acorn Atom Basic, etc. including the Sinclair.

£14.50

APPLE II USERS GUIDE — *POOLE, MCNIFF, COOK*
The book is a true programming tool that really instructs in the using of the Apple Computer. Enables you to program in two versions of BASIC.

£11.10

ADVANCED BASIC — *J. COAN*
Develops the readers expertise with BASIC through strings and files to graphing and more important mathematical functions

£8 45

ATARI BASIC — *ALBRECHT, FINKEL & BROWN*
This book teaches how to write computer programs to use in the office or home in any field from education to business to the humanities

£5 30

THE BUSINESS SYSTEM BUYERS GUIDE — *OSBOURNE/MCGRAW-HILL*
This book explains every significant feature of both software and hardware of a business system

£6 95

BASIC BASIC — *J. COAN*
One of the most widely sold text books on BASIC. The book uses over 100 example problems to illustrate the essential techniques of the language

£8 25

CP/M PRIMER — *S. M. MURTHA & M WAITE*
This book begins with an introduction to Micros in general and explains the concepts needed to understand the CP/M operating system. This is followed by details of the operation and capabilities of the system and should lead to a complete understanding

£8 45

INSTANT BASIC — *G. BROWN*
Here for the microcomputer enthusiast is finally a book to teach you BASIC which slowly introduces new ideas in a non-mathematical context. Interspersed with amusing graphics this book is fun to use

£9 75

INTRODUCTION TO MICROCOMPUTERS — *A. OSBOURNE*
Volumne 0 — The Beginners Book
If you know nothing about computers this is the book to begin with. It explains what computers are and describes their components.

£6 95

INTRODUCTION TO MICROCOMPUTERS — *A. OSBOURNE*
Volume 1 — Basic Concepts
This book describes application techniques common to all microcomputers yet specific to none. All the basic hardware and software concepts are explained simply.

£10 10

OSBOURNE 4 & 8 BIT MICROPROCESSOR HANDBOOK — *OSBOURNE, KANE*
This book describes virtually every 4 & 8 bit microprocessor on the market today.

£13 60

PET and the IEEE 4888 BUS (GPIB) — *FISHER, JENSEN*
A book for instrument designers, scientists, programmers and hobbyists — which shows how you can have a low-cost versatile system that may be interfaced to any of hundreds of electronic instruments.

£11.60

PET/CMP PERSONAL COMPUTER GUIDE — *DONAGHUE, ENGER*
An invaluable source of information for any PET or CBM user — giving details on BASIC programming, storing data, preventative maintenance and assembly language

£11 10

PRACTICAL BASIC PROGRAMS — *POOLE*
A usage manual suitable for beginners or advanced programmers, answering many inevitable problems and examining all possible uses and capabilities of the machines.

£11 60

SARGON: A COMPUTER CHESS PROGRAM — *D & K SPRACKLEN*
Here is the computer chess program that one first place in the first chess tournament at the 1978 West Coast Computer Fair. It is written in Z-80 assembly language using the TDL macro assembler. It comes complete with block diagram and sample printouts

£11.70

SARGON CHESS FOR APPLE II 24K — *D & K SPRACKLEN*
This cassette is adapted for the Apple II by Gary Shannon and is the program which won the 1978 West Coast Computer Fair Chess Tournament. The user can playback on white and can select the dept of look-ahead from 1-6 ply.

£11.85

SOME COMMON BASIC PROGRAMS — *POOLE, BORCHERS*
Includes 76 short programs covering financial, mathematical, statistical and general interest subjects, all of which have been tested.

£11 10

SOME COMMON BASIC PROGRAMS/PET — *POOLE, BORCHERS*
A useful examples book working from the simplest of programs to sophisticated statistical test programs, each clearly laid out and explained

£11.10

Z-8000 ASSEMBLY LANGUAGE PROGRAMMING — *LEVENTHAL/OSBOURNE/COLLINS*
This book describes the entire Z-8000 instruction set in detail, covering all the fine points of assembly language programming. It is an assembly language tutorial for new programmers and a comprehensive reference for experienced programmers.

£13.60

6502 ASSEMBLY LANGUAGE PROGRAMMING — *LEVENTHAL*
Another fine manual in the Osbourne Assembly Language series to join the best selling 8080, 6800 and Z-80 books.

£12 10

6809 ASSEMBLY LANGUAGE PROGRAMMING — *LEVENTHAL*
The book covers 6809 assembly language programming in unmatched detail.

£12 10

THE 8086 BOOK — *RECTOR/ALEXY*
This book includes the 8088 and is a comprehensive reference for this powerful new microprocessor, covering hardware, programming, interfacing and applications.

£12 10

*Remember all prices shown include post, packing and V.A.T. where applicable.*

# 50 MORE PROGRAMS

*Club Price

BOUNCEOUT
You direct a ball at a wall made up of three types of bricks. Each time you hit a brick it disappears, increasing your score. Can be used with Paddles or Joystick.
Pet Cass £7.50

BRIDGE PARTNER
It's you and the dummy against the computer in a standard notation contract bridge program. The computer deals at least 10 million different hands.
Apple Disk £17.50

B1 NUCLEAR BOMBER
You must fly your B1 Bomber on a mission over the Soviet Union. You must fly through unlimited numbers of MIGS and SAMS. You can rely on your self defence missiles and electronic counter maneouvres.
Apple Cass 16K £10.00
Atari Cass £10.00
Pet Cass £10.00
TRS-80 Cass £10.00

CHECKMATE — 80
A choice of 10 levels of play from where the computer has only 3 seconds to plan a move, to infinity where the computer will consider every move possible.
TRS-80 Cass M1. L.2. £13.50

COMPUTER ACQUIRE
The object of the game is to become the wealthiest person in the "business" game. Can be played by 2-6 players or 1 against the computer.
Apple Cass 16K £13.35
Pet Cass £13.35
TRS-80 Cass £13.35

COMPUTER AMBUSH
You get a computer controlled mapboard of a French village with step by step regulated play. Extensive line of sight rules provide for hidden movement. Each soldier is rated for strength, intelligence and marksmanship. Playing time, 1-5 hours.
Apply Disk £39.96

COMPUTER BISMARK
A classic for war games recreating this dramatic sea chase. Includes all rule books, charts and command cards.
Apply Disk £39.96

COMPUTER CHESS
You can play eight levels of chess against the computer. Moves are made with a joystick. Both "castling" and "en passant" moves can be made by both you and the computer. The board can be set up for a particular problem or situation.
Atari Cart £24.50 *£22.10

CONFLICT 2500
The year is 2500 AD. You must defend earth against the computer aided Planet Pulverizers.
Apple Cass 16K £10.00
Atari Cass £10.00
Pet Cass £10.00
TRS-80 Cass £10.00

CONNECT FOUR
A challenging vertical strategy game. Players must get four counters in a row — down, across, or diagonally to win.
Texas Module £19.95

COSMIC FIGHTER
Your ship comes out of hyperspace right under a fleet of aliens. Effortlessly you destroy them only to be confronted with another wave more intelligent than the last. Your fuel is running low and there are two more waves of aliens to defeat before docking for more fuel. A very good game with sound and can be used with Joysticks.
TRS-80 Cass £10.75
TRS-80 Disk £13.50

COSMIC PATROL
Cosmic Patrol is not just another search and destroy game. With it's fast real time action, impressive sound and superb graphics, this machine time program is the best in it's genre.
TRS-80 Cass M1. L.2. £11.00
TRS-80 Disk M1. L.2. £13.50

CRAPS
Las Vegas Craps is a 1 or 2 player Hi-Res dice game, even better than the real thing. There's no money to lose.
Apple Disk £13.35

CYBER STRIKE
3-D effects and animation in this space adventure using a full 48K of assembly language programming.
Apple Disk £26 65

DATESTONES OF RYN
You are Brian Hammerhead. You are a mercenary with the singular honour of undertaking a most hazardous mission. Will you emerge the victor and carry home the Datesones and the head of the thief, Rex the Reaver, or will you meet your end with a blade of cold steel?
Apple Cass 32K £11.95
Apple Disk 48K £13.95
Atari Cass £13.50
Pet Cass 16K £11.95

FASTGAMMON
This version of the game is so named as it only takes an instant to make it's moves. It also makes a good instructor to beginners.
Atari Cass 8K £13.50

GALACTIC EMPIRE
With the aid of various officers who will assist you in raising armies and taxes you must unite the central galactic system under a single flag.
Apple Disk £16.65
TRS-80 Cass £10.00

GALACTIC TRADER
You must trade and barter your way around the galaxy while your onboard computer keeps track of your transactions. But you must keep a level head when dealing with some aliens.
Apple Disk £16.65
TRS-80 Cass £10.00

GALACTIC REVOLUTION
You must choose how to ignite or suppress the impending revolution, by social changes or military advantage if you have one
Apple Disk £16.65
TRS-80 Cass £10.00

GALACTIC TRILOGY
Galactic Empire, Galactic Trader & Galactic Revolution on one Disk.
TRS-80 Disk £26 75

GALAXY INVASION
Galaxians for the TRS-80 range, with sound and can be used with a Joystick.
TRS-80 Cass £10.75
TRS-80 Disk £13.50

GALAXY ONE
A disk program with all the Treasure Trove Games 1-6. 24 programs.
Pet Disk £28.75

GALAXY WARS
Machine Language full colour graphics and sound effects make this space challenge to destroy the enemy space saucers more than exciting
Apple Disk £16 95

GLOBAL WAR
An adult strategy game for 2-9 players. Who will take control of the earth? A highly detailed map of the earths continents are divided into 40 regions. The computer assigns each player a portion of the regions and starting armies. Then battle commences.
Apple Disk £16.65

GOLDEN MOUNTAIN
Mine the Golden Mountain for precious gems and ore without collapsing the shack on top. Force plundering bandits to make the mistake that will bring the mountain down on top of them and win extra points.
Apple Disk 32K £13.50

GOLF
Without leaving the comfort of your armchair, you can play a complete 18 hole course with a choice of clubs and playing angles.
Apple Cass £8.00

HELLFIRE WARRIOR
The exciting sequel to Temple of Apshai. Only there are 4 new

levels each with 60 rooms. The object of this adventure is to bring the warrior maid Brynhild back to the sun and air, to break the spell that binds her.

| | |
|---|---|
| Apple Disk 48K | £18.95 |
| Pet Cass 32K | £16.95 |

HOUSEHHOLD MONEY MANAGEMENT
Help set budget guidelines, track income and expenses, spot problem areas and keep easily accessible records. Set up a system to coordinate your income and expenses for the coming year — month by month, category by category. Compare your actual income and expenses to previously projected figures to help find problem areas. Also provides instant graphic Analysis and tables.

| | |
|---|---|
| Texas Module | £29.95 |

HUNT THE WUMPUS
An exciting hunt in a hidden maze of caverns and twisted tunnels. Seek out the lair of the Wumpus while avoiding the perils along the way.

| Pet Disk | £33.35 |

INVADERS
Probably the most popular arcade game ever.

| | | |
|---|---|---|
| TRS-80 Cass M1. L.2. | £7.50 | *£6.75 |

INVASION ORION
Challenge the computer one on one to battle scenarios in deep space. The computer takes care of the details making the game easy to play

| | |
|---|---|
| Apple Cass 32K | £14.95 |
| Apple Disk 48K | £16.95 |
| Atari Cass | £16.95 |
| Pet Cass 16K | £14.95 |

JET FIGHTER PILOT
Takes you as close to real combat flying as possible without the 'G'. Your take off can be from a runway or from a carrier bourne steam catapult. You decide when to retract flaps, release auxiliary drop tanks and if you're landing on an aircraft carrier, don't forget to deploy your landing hook.

| | | |
|---|---|---|
| TRS-80 Cass M1. L.2. | £13.50 | *£12.15 |

JOURNEY
Journey wisks you off to a land filled with dangerous monsters and priceless treasures. Your Apple is your eyes and ears and you will rely on it to help you acquire all the treasure that you can carry without being eaten alive.

| | |
|---|---|
| Apple Disk | £19.95 |

LOGIC GAMES PACK
2 programs, Code Breaker and Code Maker, are based on the famous Invicta game — Mastermind. Both are in colour, have sound and can be used with a Joystick.

| | |
|---|---|
| VIC Cass 5K | £9.95 |

METEOR MISSION
Normally known in the arcades as Lunar Lander. Super sound effects and can be used with Joysticks

| | |
|---|---|
| TRS-80 Cass | £10.75 |
| TRS-80 Disk | £13.50 |

MICROCHESS
With more levels than you will probably ever need.

| | |
|---|---|
| Apple Disk | £17.50 |

MICROGAMMON 2
Using Hi-Res graphics during each move of this exciting backgammon game you actually see the pieces slide across the board.

| | |
|---|---|
| Apple Disk | £13.35 |

MIDWAY CAMPAIGN
Your micro computer controls a Japanese task force sent to capture Midway Island. If they win air superiority then they are guaranteed success.

| | |
|---|---|
| Apple Cass 16K | £10.00 |
| Atari Cass | £10.00 |
| Pet Cass | £10.00 |
| TRS-80 Cass | £10.00 |

MISSILE COMMAND
Defend six major cities from nuclear attack using missile bases, like the famous arcade game. Try to destroy incoming nuclear missiles, guard against killer satellites and smart missiles. Use your joystick to guide you target sight. Can be played by one or two

| | |
|---|---|
| Atari Cart | £29.95 |

MORLOCS TOWER
While the general aim is always to do away with the demented Morloc, you can always approach this game in a multitude of differing ways. Spend a diverting hour or so wandering around the 6 floor dungeon battling with many different monsters

| | |
|---|---|
| Apple Cass 32K | £11.95 |
| Apple Disk 48K | £13.95 |
| Pet Cass 24K | £11.95 |

MULTIPLICATION
Another math tutorial tool that teaches the basics of multiplication. Excellent step-by-step teaching process makes learning fun. For children aged 7-10.

| | |
|---|---|
| Texas Module | £34.95 |

MUSIC MAKER
A music composition package that lets even a novice composer create computer music by simply arranging notes on an electronic musical staff. A terrific home music introduction tool for adults and children.

| | |
|---|---|
| Texas Module | £34.95 |

MUSIC MAKER DEMONSTRATION
Demonstrates the kind of musical compositions that can be created with the Music Maker Solid State Software Command Module. Contains five different music files with songs ranging from Christmas and Childrens songs to some popular classics.

| | |
|---|---|
| Texas Module | £14.95 |

NORTH ATLANTIC RAIDER
Will the Hood sink the Bismark or will history repeat itself. Your decisions will decide it's fate.

| | | |
|---|---|---|
| Apple Cass 16K | £10.00 | *£9.00 |
| Atari Cass | £10.00 | £9.00 |
| Pet Cass | £10.00 | £9.00 |

NUKEWAR
A computer simulation of a nuclear confrontation between two powers. You must choose how best to defend your country, either by espionage or by building up your armed forces to a massive size.

| | |
|---|---|

You will have to fight off, from the centre of your orbiting space station, enemy forces which are trying to put killer satellites into orbit around you.

| | |
|---|---|
| Apple Disk | £19.95 |

PADDLE FUN
Allows you to get the maximum fun from your paddles with four super games. Invaders, Golf, Howitzer and Space Wars.

| | |
|---|---|
| Apple Disk 32K | £13.75 |

# The world's most prestigious Card is also the most practical. Here are just some of its more useful benefits.

## Freedom from cash worldwide

Carrying the American Express Card is like having all your cash in some universal currency–except that it's not bulky, and you can use it again and again without parting with it. It will be welcomed in over 400,000 establishments in 165 countries.

Unlike a credit card, the American Express Card doesn't specify any limit on charges to your account. You can use it to spend as much as you have shown you can afford; and you confirm this by paying in full on receipt of each monthly statement.

Because you pay 'as you go' each month, there are no interest charges.

The American Express Card is not for people who need to live on credit.

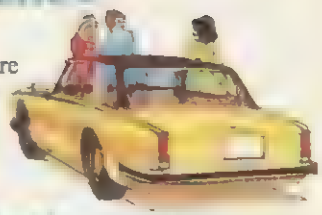
## Easier travel worldwide

You can use the Card with over 100 major airlines–for fares and even excess baggage–and in restaurants, shops, hotels everywhere. No cash problems if you stay longer than planned. Hire a car without deposit, too. Then there are over 1,000 Travel Service Offices* throughout the world ready to help you–in English.

## Welcome throughout the U.K.

You don't have to travel abroad to benefit. You'll find the Card welcomed at good restaurants, hotels and shops throughout the country . . . for petrol and car servicing . . . for holiday bookings and mail order . . .

for hotel and theatre ticket reservations by 'phone.



When charging travel tickets to the Card, Travel Accident Insurance up to £35,000 is included automatically without cost. (Insurance is offered through American Express Company and subject to conditions of cover.)

## Apply today

Complete the Form and post it today. There's no remittance to enclose, and no stamp needed – it's Freepost.

*Including Representatives and Subsidiaries

# Don't hesitate...apply now and enjoy the benefits of the world's most prestigious Card.

# 20 MORE PROGRAMS

*Club Price

PHANTOMS 5
Arcade action game simulating a Fighter-Bomber mission in realtime 3-D graphics. Uses Paddles or Joystick.
Apple Disk £19.95

PLANETOIDS — ASTEROIDS
One of the most popular and challenging arcade space games at the moment.
Apple Cass £10.25
Apple Disk £13.55
TRS-80 Cass M1. L.2. £10 95
TRS-80 Disk M1. L.2. £13.50

POKER TOURNAMENT
Play Draw Poker with 5 other (computer controlled) opponents. When a player loses all his money he leaves the game.
Apple Cass £10.25
Apple Disk £13.55
TRS-80 Cass £10 25

PRE-SCHOOL — EARLY LEARNING FUN
Colourful, exciting and educational. Activities help teacher shape, number and letter recognition, counting, sorting and the alphabet — as well as teaching first computer skills. Fun for children aged 3-6.
Texas Module £16 95

PROGRAMMING AIDS I
Includes the following capabilities: cataloging disks, "DISPLAY AT", "ACCEPT AT", screen print, lower case letters, second ASCII set subroutines and user-defined characters.
Texas Disk £14.95 *£13 45

PROGRAMMING AIDS II
Provides the experienced user with the ability to sort file information into alphabetic or numeric order for reporting or processing purposes. Includes disk sort, RAM sort, file dump, and merge program.
Texas Disk £24 95 *£22 45

PROGRAMMING AIDS III
Provides a useful tool to cross reference a list of all variables, arrays, keywords, functions and line number references. The user can then find where certain variables are used, even where subroutines are called, or even which lines need changing to make the program compatible with another form of Basic. Resequencing, deletion, of program parts, and the merge of a sequence of code is also made possible
Texas Disk £19.95 £17.55

PULSAR 2
Two games each with 8 levels of play. Pulsar, with your mission to destroy the spinning shields around the Pulsar. And Wormwall, one of the strangest mazes ever as openings only occur temporarily as coloured lines cross.
Apple Disk £19.95

RECREATIONAL/EDUCATIONAL PACK
Math Hurdler. You are racing along a race track, trying to jump 10 hurdles. The hurdles are arithmetic problems. You set the difficulty at the beginning of the race. Don't get things wrong or your man will fall down when he tries to jump.
Monster Maze. You are exploring a labyrinthian cave, trying to traverse it from one end to the other. The maze is populated with monsters who can walk through the walls as they try to catch and eat you. Both are in colour, have sound and can be used with a Joystick
VIC Cass 5K £9 95 *£8 95

RESCUE AT RIGEL
The trouble started when a renegade High Tollah sought sanctuary in the Stellar Union. To get back at the renegade, his uncaring adversary ordered 10 men and women from the Orion colony of Ultima Thule taken prisoner. Will your alter-ego-Sudden Smith be able to save them before they are transformed into aliens
Apple Cass 32K £13 95
Apple Disk 48K £15.95
Atari Cass £20.25
Pet Cass £13 95

REVERSI
Reversi is the ancient name for the very popular board game, Othello. Can be used with Joysticks
Atari Cass £13.50

ROAD RACE
A game for two people and two joysticks. Two cars racing around a choice of three tracks and trying to compete the alotted amount of laps before the other player. Includes a lap counter that counts to tenths of a second
Pet Cass £7.50 *£6 75

ROBOT ATTACK
The newest and most astounding arcade game to reach earth that talks.
TRS-80 Cass £10.75 *£9.65
TRS-80 Disk £13 50 £12 00

ROULETTE
With this 1 or 2 player game you can actually place bets with the keyboard or light-pen.
Apple Disk £13.35

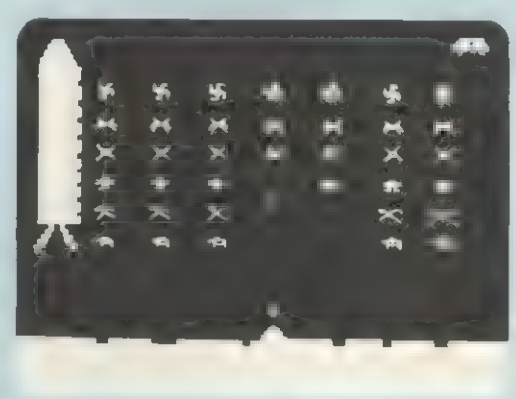
SEAWOLF
Use either your keyboard or joystick to move your torpedo launcher around and to fire your torpedoes as you try to hit the ships that are speeding by above you. Between you are rows of mines that add to the difficulty of getting away a clear shot.
Pet Cass £7.50

SKIRMISH — 80
4 Games on 1 cassette.
Mission Impossible. Drive your Tank into a prison courtyard, pick up a prisoner and escape.
Trap. A 2 player game where you must manoeuvre your opponent into a position where he is hopelessly trapped.
Wipeout A 2 player game where your mobile gun gets points for destroying as many obstacles as possible
Block 'em. A 2 person game where you should manoeuvre your opponent into a position from where there is no safe move
TRS-80 Cass M1 L2. £7.75

SNOGGLE
Wend your way through a maze of ghosts who will eat you up if they catch you. This game is not easily mastered.
Apple Disk £16.65

SNOGGLE
Joystick version.
Apple Disk £21.95

SPACE EGGS
Use your Paddles on this arcade style game that will have you hatching Spiders, Lips, Wolves and Fuzzballs
Apple Disk £19.95



SPACE INVADERS
You've made a mission to the moon, but so have the deadly Space Invaders. It's up to you to protect the lunar surface as well as yourself and your laser cannon. 12 variations that will need joysticks — for one or two players.
Atari Cass £12.95
Atari Cart £24.50

# 30 MORE PROGRAMS

*Club Price

SPEECH EDITOR
Discover the excitement of the computer generated voice capabilities of the TI-99/4 Home Computer. You can immediately listen to and experiment with words by typing words, phrases and sentences selected from the solid state vocabulary.
Texas Module £39.95

STAR CRUISER
Fast action arcade game, number 3 best seller in it's first month of release.
Apple Disk £16.65

STAR MINES
You must guide your spacecraft through a seemingly endless minefield in space. Armed only with a single Laser Cannon you must clear your sector before jumping into hyperspace, only to land in another minefield. Five levels of skill make this one difficult.
Apple Disk £19.95

STARFLEET ORION
Fight space battles right here on earth when you play Starfleet Orion — a simulation of the various conflicts that might arise between starships of opposing powers.
Apple Cass 16K £13.95
Apple Disk 48K £15 95
Pet Cass 8K £13.95

STAR RAIDERS
Your mission is to destroy all Zylon Empire star ships. Using dramatic sound and screen displays this strategy and action game is the most exciting one available today. Needs a joystick for control.
Atari Cart £29.95

STAR WARRIOR
You are a star-faring knight, bound tightly by a code of ethics, a mercenary with a cause. You must take on an entire planetary force — alone. You are outnumbered but far from helpless.
Apple Disk 48K £18.95
Atari Cass £27.10

SUPER BREAKOUT
A sophisticated version of the popular video game Breakout in which you smash through layers of bricks and knock out a wall. Four different games available which up to eight players can play. Uses up to four paddle controllers.
Atari Cart £24.50

SUPER NOVA
A super variation on asteroids. Can be used with a Joystick.
TRS-80 Cass £10.75
TRS-80 Disk £13.50

TANKTICS
Tank battles at their best.

| | | |
|---|---|---|
| Apple Cass 16K | £16.00 | *£14.40 |
| Apple Disk | £19.50 | £17.55 |

| TRS-80 Cass | £16.00 | £14.40 |
| TRS-80 Disk | £19.50 | £17.55 |

TEACH YOURSELF BASIC
Learn to program in Basic the easy way — let the computer teach you! Ten on screen lessons give hands-on experience with everything from simple commands to colour graphics and sound
Texas Disk £39.95

TEMPLE OF APSHAI
You will venture into an essentially unknown world where you'll feel at home with spiders, zombies, skeletons and ghouls. You will need armour and weapons to take with you when you explore the 200 rooms on 4 floors. But wait, the treasures you seek are surrounded by traps like bottomless pits, daggers and flames. Discover your fantasy world.
Apple Disk 48K £17.95
Pet Cass 32K £15.95

TERMINAL EMULATOR I
Links your home computer to the telecommunications world — accessing subscription data services and time shared computer systems. As data is received, it can be stored on disk or tape, or you can print information on an optional printer.
Texas Module £39.95

TERMINAL EMULATOR II
Second in a series of terminal emulator modules. Capabilities are similar to Terminal Emulator I except for these extras: File transfers with error definition, improved keyboard interface: ability to handle colour, sound, speech and graphics; access of text-to speech from a user-written program.
Texas Module £49.95

TREASURE TROVE OF GAMES
(All Treasure Trove of Games are for Pets and are on cassette)

Each Cassette £11.50 *£10.35

Treasure Trove of Games 1. Lunar Landing, Rotate, Wumpus, 3-D Tic Tac Toe
Treasure Trove of Games 2. Jumbo Jet Lander, Target Pong, Draw Poker, Galaxy Games.
Treasure Trove of Games 3. Concorde Lander, Off the Wall, Spacetrek, Wrap Trap.
Treasure Trove of Games 4. Super 9×9, Formula 1, Blackjack, Space Talk & Space Flight.
Treasure Trove of Games 5. Glider, Awari, Othello, Reverse.
Treasure Trove of Games 6. Backgammon, Polaris, Crypto, Life.
Treasure Trove of Games 7. Petopoly, Star-Trek.
Treasure Trove of Games 8. Sorcerers Castle, Jason and the Argonauts.
Treasure Trove of Games 9. Dodge City, Molecules & Atoms, Horse Race, One Arm Bandit.
Treasure Trove of Games 10. Squadron Scramble, Tower of Hanoi, Subkiller, Minefield.
Treasure Trove of Games 11. Duel, Landslide, Dominoes, L-Game.
Treasure Trove of Games 12. Super Bowling, Dive Bomber, Money Table, Pet Picture.

VIC GAMES
3 Games on one cassette:
Seawolf. You are the commander of a Submarine with the mission to destroy as many ships as possible in 60 seconds.
Bounceout. You direct a ball at a wall made up of three types of bricks. Each time you hit a brick, it disappears, increasing your score
Victrap. Try to trap Vic into running into either your trail, Vics own trail or the boundary of the screen. Vic will keep score of who wins each round and display it at the end of each round.
All are in colour, have sound and can be used with a Joystick.
VIC Cass 5K £16.95

VIDEO CHESS
This powerful, easy to use package keeps track of all moves, gives you help if you want it, and provides a challenging opponent — or play with an opponent of your choice. You can save a particular game for later replay.
Texas Module £49.95

VIDEO GAME I
Practice your aim with Pot Shot, try your skill at Pinball, or trap your opponent with Doodle. Three exciting games for hours of fun
Texas Module £19.95

ZEROZAP
Fast action Pin-Ball Game with lights and sound effects. You can even create your own playing field
Texas Module £19 95

ZORK
Unearthly creatures guard treasures, mazes confound you, but if you can discover the 20 treasures of Zork and return them to the trophy room you can leave alive. But be careful because in Zork they take no prisoners.
Apple Disk £33.00

# LE-STICK

Finally! The ultimate goal in microcomputer hardware, achieved. A joystick with such remarkable realism and control that even the thought of other joysticks virtually vanish. Le-Stick was born from a design used and tested in U.S. Airforce test programmes. Inside are motion detectors which will manoeuver your sights in any direction you want with simple single handed movements. The large red button on top provides a quick and accurate firing mechanism for better response times. From Star Raiders to graphic drawing programs — Le-Stick eleminates all the frustrations you experience with conventional two handed paddles or keyboards.
